| | Course Objectives: | | | | | | | |
|---|--|--|--|--|--|--|--|--|
| | The course is taught with the objectives of enabling the student to: | | | | | | | |
| 1 | To learn field calculations between parallel planes. | | | | | | | |
| 2 | To analyze and study rectangular and circular wave guides using field theory. | | | | | | | |
| 3 | To Understand the operation of passive waveguide components. | | | | | | | |
| 4 | To Analyze microwave circuits using scattering parameters. | | | | | | | |
| 5 | To study the construction and to understand principal of amplification/Oscillation at microwave frequency. | | | | | | | |

| Course | Course Outcomes: | | | | | | | |
|--------|--|--|--|--|--|--|--|--|
| On con | On completion of this course, the student will be able to : | | | | | | | |
| CO-1 | Understand electromagnetic wave propagation in parallel plane waveguides. | | | | | | | |
| CO-2 | Understand electromagnetic wave propagation in rectangular and circular waveguides and resonators. | | | | | | | |
| CO-3 | Understand the formulation of Scattering Matrix and define them for various microwave components. | | | | | | | |
| CO-4 | Learn principle of operation and applications of specialized microwave vacuum tubes. | | | | | | | |
| CO-5 | Distinguish between transfer electron devices from ordinary low frequency semiconductor devices and learn basic modes of operation of Gunn Diode and its applications. | | | | | | | |

| | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| CO-5 | 2 | 2 | | | | | 1 | 1 | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction, Microwave Spectrum and Bands, Advantages and Applications of Microwaves, Waves between parallel planes, TE, TM, TEM Waves characteristics, Velocity of propagation, Group and Phase velocity, Wave Impedance, Attenuation in parallel plate guides.

UNIT-II

Rectangular Waveguides: Rectangular waveguides, TM and TE waves, Impossibility of TEM wave in waveguides, Wave Impedance, Attenuation in Rectangular waveguides, Circular Waveguides: Solution of wave equations in cylindrical coordinates, Characteristics of TM and TE modes. Microwave Cavities: Rectangular and Circular Cavity Resonators, Quality factor and applications of cavity resonators.

UNIT-III

Microwave circuit concepts, Introduction to scattering parameters. Properties and S-parameters of reciprocal components – E and H Plane Tees, Magic Tee, Directional Coupler. Non-Reciprocal Components: Ferrites – Composition and Faraday Rotation; Ferrite Components – Isolators, Gyrators and Circulators. S- Parameters of Isolator and Circulator.

UNIT-IV

High Frequency limitations of conventional tubes, Two cavity Klystron, Bunching by velocity modulation, Small signal theory of bunching, Effect of grid interception and debunching. Tran's admittance, Reflex Klystron, Mathematical theory of bunching, Admittance spiral and condition of oscillation. Principle of operation, construction and characteristics of TWT Amplifier, Backward wave oscillator (qualitative treatment only).

UNIT - V

Principle of operation, construction and characteristics of multi-cavity magnetron, Microwave Solid-state devices: Introduction, Classification and Applications. TEDs — Introduction, Gunn Diode — Principle, RWH Theory, Characteristics, Basic Modes of Operation, Oscillation Modes, Introduction to Avalanche Transit-Time Devices.

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction to Cellular Mobile Communications: History of Mobile cellular: AMPS system (First-generation systems), Second-generation System, 3G Systems, 4G Systems, 5G Systems, mm-wave mobile communications for 5G cellular, Pico-cells and micro-cells in mobile technology. Other Cellular-like Systems, Spectrum Efficiency Considerations.

Basic Cellular systems, Circuit-Switched and Packet-Switched Systems, Performance criteria, Voice quality, Data quality, Picture quality, Service quality.

Uniqueness of Mobile Radio Environment, Description of Mobile Radio Transmission Medium, Model of Transmission Medium, Delay spread and Coherence Bandwidth..

UNIT-II

Frequency Reuse Concept and Cellular system Components: Concept of Frequency reuse channels, Frequency reuse schemes, Frequency reuse distance, Number of Customers in the System, Co-Channel Interference Reduction Factor, Desired C/I from a Normal case in an Omni-directional antenna System, Handoff mechanism, Cell splitting, Consideration of the Components of Cellular Systems, Antennas, Switching equipment and Data Links.

UNIT-III

Cell Coverage: General Introduction, Ground Incident angle and Ground Elevation angle, Ground Reflection angle and Reflection point, Obtaining the Mobile Point-to-Point Model (Lee Model), A standard condition, Obtain Area-to-Area Prediction model, The Phase difference between a direct path and ground-reflected path, A general formula for Mobile Radio Propagation, Propagation over water or Flat open area, Between Fixed stations, Land-to-Mobile transmission over water, Obtain Path loss from a Point-to-Point Prediction Model in Non-obstructive condition and obstructive condition, Form of a Point-to-Point Model, General Formula and its Merit

UNIT-IV

Cell-Site and Mobile Antennas: Antennas at Cell-site, Omni-directional antennas, Directional antennas, Location antennas, Set-up Channel antennas, Space Diversity Antennas at cell site, Umbrella-Pattern Antennas, Interference reduction antennas, Smart antennas, types and applications, MIMO system, SDMA technology.

Mobile Antennas, Roof-mounted antenna, Glass-Mounted antenna, High-gain antenna, Horizontally and Vertically oriented Space-Diversity Antennas.

UNIT - V

Handoff and Dropped Calls: Value of Implementing Handoffs, Types of Handoff, Prioritizing handoff, Umbrella cell approach, Initiation of Hard Handoff, Delaying a Handoff, Forced Handoffs. Cell-site Handoff only, Intersystem Handoff.

Introduction to Dropped Call Rate and Soft Handoffs.

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

GPS fundamentals: Trilaiteration, Transit, GPS Principle of Operation, Architecture: Space, Control and User Segments, Operating frequencies, Orbits, Keplerian elements.

UNIT-II

GPS and UTC Time, Signal structure, SPS and PPS services, C/A and P-Codes, Geometry of ellipsoid, geodetic reference system, Geoid and Ellipsoid and Regional datum: Earth Centered Earth Fixed (ECEF) and Earth Centered Inertial (ECI) Coordinate systems and World Geodetic System (WGS 84) datum, Types of receivers, Spoofing and Anti-spoofing.

UNIT-III

GPS Error Models: Ionospheric error, Tropospheric error, Ephemeris error, Clock errors, Satellite and receiver instrumental biases, Multipath; GPS Navigation and Observation data formats, Various DOPS.

UNIT-IV

GPS Modernization: Future GPS satellites, New signals and their benefits, New Control Segment, Principle of operation of DGPS, architecture and limitations, GPS Applications: Surveying Mapping Marine, air and land Navigation, Military and Space Application. GPS Integration with Geographic Information System (GIS), Inertial Navigation System (INS), Pseudolite and Cellular.

UNIT - V

Other GRNSS: GLONASS, GALILEO, QZNSS, CNSS and IRNSS System. Relative advantages of SBAS, SBAS features and Principle of operation of Wide area augmentation system (WAAS), GPS Aided GEO Augmented Navigation (GAGAN) and Ground Based Augmentation System (GBAS), Local Area Augmentation System (LAAS).

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Basics Of Testing And Fault Modeling

Introduction to Testing - Faults in digital circuits - Modeling of faults - Logical Fault Models - Fault detection - Fault location - Fault dominance - Logic Simulation - Types of simulation - Delay models - Gate level Event-driven simulation.

UNIT-II

Fault Detection: Fault detection and redundancy in combinational and sequential circuits, Fault Simulation- Applications and general techniques. Testing for single stuck faults.

UNIT-III

Design For Testability

Design for Testability - Ad-hoc design - observability and controllability by use of Scan Registers, Generic scan based design - Classical scan based design - JTAG Boundary scan standard.

UNIT-IV

Self Checking Design: Basic concepts, application of error-Detecting and Error-correcting codes, checking circuits and self checking, self checking checkers- m/n code checkers and Berger code checkers, self checking combinational and sequential circuits.

UNIT – V

BIST and TPG: BIST concepts, Testing types and Test pattern generation for BIST, Output response analysis, Fault coverage enhancement with test point insertion, mixed mode BIST and Hybrid BIST.

UNIT-I

Basics of Artificial Neural Networks: Characteristics of Neural Networks, Historical Development of Neural Network Principles, Artificial Neural Networks: Terminology, Models of Neuron: McCulloch-Pitts model, Perceptron and Adaline neuron, Topology, Basic Learning Laws: Hebb's law, Perceptron, Delta, Widrow and Hoff LMS, Correlation, Instar (winner-take-all) and outstar learning.

UNIT-II

Activation and Synaptic Dynamics: Introduction, Activation Dynamics Models: Additive,

shunting and stochastic activation models, Synaptic Dynamics Models: Requirements of learning laws, Distinction between the activation and synaptic dynamics model, Learning Methods, Recall in Neural networks.

UNIT-III

Feed-forward Neural Network: Introduction, Analysis of Pattern Association Networks: Linear Associative Network, Analysis of Pattern Classification Networks: Perceptron, Pattern classification problem, Perceptron learning law, Perceptron convergence theorem, Perceptron representation problem.

UNIT-IV

Back Propagation: Back propagation learning rule, Features of Back propagation, and limitations of and extensions of Back Propagation rule.

UNIT - V

Feedback Neural networks: Linear auto associative feed forward and feedback networks. Hopfield network, capacity and energy analysis of Hopfield neural network. Stochastic neuron, Boltzmann machine, Boltzman learning law, Issues in Implementation of Boltzman learning law.

| On com | On completion of this course, the student will be able to: | | | | | | | |
| CO-1 | To understand the state-of-the-art in network protocols, architectures and applications | | | | | | | |
| CO-2 | To Explain the Fundamental Concepts and applications of ad hoc and wireless sensor Networks | | | | | | | |
| CO-3 | To Describe the MAC protocol issues of Adhoc and sensor networks | | | | | | | |
| CO-4 | To Discuss the WSN routing issues by considering QoS measurements | | | | | | | |
| CO-5 | To understand the state-of-the-art techniques and protocols in QoS and Energy management for wireless sensor networks. | | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction: Fundamentals of wireless communication technology, the electromagnetic spectrum radio propagation, characteristics of wireless channels, modulation techniques, multiple access techniques, wireless LANs, PANs, WANs, and MANs, Wireless Internet.

UNIT-II

Introduction to adhoc/sensor networks: Key definitions of adhoc/ sensor networks, unique

constraints and challenges, advantages of ad-hoc/sensor network, driving applications, issues in adhoc wireless networks, issues in design of sensor network, sensor network architecture, data dissemination and gathering.

UNIT-III

MAC Protocols: Issues in designing MAC protocols for adhoc wireless networks, design goals, classification of MAC protocols, MAC protocols for sensor network, location discovery, quality, other issues, S-MAC, IEEE 802.15.4.

UNIT-IV

Routing Protocols: Issues in designing a routing protocol, classification of routing protocols, table driven, on-demand, hybrid, flooding, hierarchical, and power aware routing protocols.

UNIT – V

QoS and Energy Management: Issues and Challenges in providing QoS, classifications, MAC, network layer solutions, QoS frameworks, need for energy management, classification, battery, transmission power, and system power management schemes.

| Co | urse Objectives: |
|-----|---|
| The | e course is taught with the objectives of enabling the student to: |
| 1 | To make the students understand the need for several Biomedical equipment. |
| 2 | To make the students understand the operating principles of a wide range of Biomedical |
| | Equipment |
| 3 | To familiarize students with the design and functional aspects of medical imaging systems |
| | and therapeutic devices. |
| 4 | To develop the ability to assess the appropriate biomedical equipment needed for specific |
| | clinical and therapeutic applications. |
| 5 | To enable students to understand the operating principles and clinical use of therapeutic |
| | devices like pacemakers, dialysis machines, and lithotripters. |

| Course | Course Outcomes: | | | | | | |
|--------|--|--|--|--|--|--|--|
| On com | On completion of this course, the student will be able to: | | | | | | |
| CO-1 | Learn about various physiological parameters, monitoring and recording. | | | | | | |
| CO-2 | Assess the need and operating principle of equipment used in physiotherapy | | | | | | |
| CO-3 | Interpret the working principle and operating procedure and applications of Medical Imaging equipment. | | | | | | |
| CO-4 | Perceive the governing principles and functions of critical care equipments. | | | | | | |
| CO-5 | Learn about the various Therapeutic Equipment used for different applications | | | | | | |

| | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | | | | | | | | | | | | |
| CO2 | | | | | | | | | | | | |
| CO3 | | | | | | | | | | | | |
| CO4 | | | | | | | | | | | | |
| CO5 | | | | | | | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Medical Monitoring and recording: Patient monitoring: System concepts, bedside monitoring systems, central monitors, heart rate and pulse rate measurement. Temperature measurement Blood pressure measurement: Direct and indirect methods. Respiration rate measurement: Impedance pneumograph, Apnoea detectors. Ambulatory monitoring: Arrhythmia monitor

UNIT-II

Physiotherapy and Electrotherapy Equipment: Diathermy machines: Short wave diathermy, Microwave diathermy and ultrasonic diathermy Electro diagnostic/Therapeutic apparatus: Nerve muscle stimulator, Functional electrical stimulator.

UNIT-III

Medical Imaging Equipment:

X-Ray machines: Properties and production of X-Rays, X-ray machine, Image Intensifier. X-ray computed tomography: basic principle and construction of the components. Ultrasonic Imaging: Physics of ultrasonic waves, medical ultrasound, and basic pulse echo apparatus. Magnetic Resonance Imaging: Principle, Image reconstruction techniques, Basic NMR components, Biological effects, Merits.

UNIT-IV

Critical Care Equipment:

Ventilators: Mechanics of respiration, artificial ventilators, Positive pressure ventilator, Types and classification of ventilators. Drug delivery system: Infusion pumps, basic components, implantable infusion system, closed-loop control in infusion pump. Cardiac Defibrillators: Need for defibrillators, DC defibrillator, Implantable defibrillators, Defibrillator analyzer.

$\overline{\mathbf{UNIT}} - \mathbf{V}$

Therapeutic Equipment:

Cardiac pacemakers: Need for cardiac pacemakers, External and implantable pacemakers, types.

Dialysis Machine: Function of the kidney, artificial kidney, Dialyzers, Membranes, Hemodialysis machine. Lithotripters: The stone disease problem, Modern Lithotripter systems, extra corporeal shockwave therapy.

| CO4 | | | | | | | | | | | | |
| CO5 | | | | | | | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction to Artificial Intelligence: Definition. AI Applications, AI representation. Properties of internal Representation, General problem solving, production system, control

strategies: forward and backward chaining. Uninformed and informed search techniques. A* and AO* Algorithm

UNIT-II

Machine Learning and Deep Learning for Healthcare: Supervised, unsupervised, and reinforcement learning. Classification and regression techniques in clinical datasets. Neural networks, CNNs, RNNs and their applications. Case studies: Diabetes prediction, cancer classification, readmission prediction. Model evaluation: accuracy, precision, recall, ROC curves.

UNIT-III

AI in Medical Imaging and Diagnostics: Image processing fundamentals and feature extraction. AI in radiology: X-rays, CT, MRI, Ultrasound. Computer-aided diagnosis systems. Deep learning for medical image segmentation and classification. Real-world tools: Google DeepMind, IBM Watson Health.

UNIT-IV

Natural Language Processing in Healthcare: Basics of NLP and its significance in healthcare. Clinical text mining and named entity recognition (NER). Chatbots and virtual health assistants. AI in Electronic Health Record (EHR) processing. Case study: Predictive analysis from clinical notes.

UNIT - V

Ethical, Legal, and Future Perspectives. Ethical concerns: bias, transparency, and ability. Data privacy and security in AI systems. Regulatory aspects: FDA, HIPAA, CDSCO. Human-AI collaboration in clinical settings. Future directions: AI in genomics, telemedicine, and wearable technologies.

Correlation rating: Low/ Medium/High: 1/2/3 respectively

UNIT-I

Overview of the significance of energy use and energy processes in building: Indoor activities and environmental control - Internal and external factors on energy use and the attributes of the factors - Characteristics of energy use and its management - Macro aspect of energy use in dwellings and its implications.

UNIT-II

Indoor environmental requirement and management: Thermal comfort - Ventilation and air quality - Air-conditioning requirement - Visual perception - Illumination requirement - Auditory requirement.

UNIT-III

Climate, solar radiation and their influences: Sun-earth relationship and the energy balance on the earth's surface - Climate, wind, solar radiation, and temperature - Sun shading and solar radiation on surfaces - Energy impact on the shape and orientation of buildings.

UNIT-IV

End-use, energy utilization and requirements: Lighting and day lighting - End-use energy requirements - Status of energy use in buildings Estimation of energy use in a building - Heat gain and thermal performance of building envelope - Steady and non-steady heat transfer through the glazed window and the wall - Standards for thermal performance of building envelope-Evaluation of the overall thermal transfer

UNIT-V

Energy management options: Energy audit and energy targeting - Technological options for energy management.

UNIT – I

Building Plumbing - Introduction to Plumbing Systems, components of plumbing systems, and basic physics as related to plumbing. Various types of home plumbing systems for water

supply and waste water disposal, high rise building plumbing, Pressure reducing valves, Break pressure tanks, Storage tanks, Building drainage for high rise buildings, various kinds of fixtures and fittings used.

UNIT - II

Plumbing Terminology: Definitions, use/purpose of Plumbing Fixtures - accessible, readily accessible, aerated fittings, AHJ, bathroom group, carrier, flood level rim, floor sink, flushometer valve, flush tanks, lavatories, macerating toilet, plumbing appliances, plumber.

Traps: indirect waste, vent, blow off, developed length, dirty arm, FOG, indirect waste, receptors, slip joints, trap, and vent.

Water supply: angle valve, anti-scald valve, backflow, bypass, check valve, cross connection, ferrule, gate valve, gray water, joints

UNIT-III

Plumbing Fixtures and Fittings: Definitions of plumbing fixtures, fittings, appliances and appurtenances; maximum flow rates, water closets, bidets, urinals, flushing devices, washbasins, bath/shower, toilets for differently abled, kitchen sinks, water coolers, drinking fountain, clotheswasher, dishwasher, mopsink, overflows, strainers, prohibited fixtures, floor drains, floor slopes, location of valves, hot water temperature controls, installation standard dimensions in plan and elevation.

UNIT - IV

Pumping Systems: Terminology, pump heads, types of Pumps, applications, pump selection, pump characteristics, pumps and motors, pump efficiency, motor efficiency, Hydro Pneumatic Systems(HPS), Zoning, Storm Water and Drainage Pumps, introduction to starters and control panels.

UNIT - V

Codes and Standards: Scope, purpose; codes and standards in the building industry, UIPC-I, NBC and other codes, Local Municipal Laws, approvals, general regulations, standards, water supply, protection of pipes and structures, waterproofing.

Introduction to the Sector and the Job Role:

Overview of the Plumbing Sector- Importance and scope of plumbing in construction and maintenance, career opportunities in plumbing.

Understanding the Job Role of a Plumber – Duties and responsibilities of a plumber, Skills and attributes required for a plumber.

Safety Measures and Regulations –Importance of safety in plumbing, Basic safety regulations and practices.

Tools and Equipment – Introduction to basic plumbing tools and equipment, Proper use and handling of plumbing tools.

Reference books and codes:

| CO4 | | | | | | | | | | | | |
| CO5 | | | | | | | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction to DBMS:

Introduction: Database System Applications, Purpose of Database Systems, View of Data, Database Languages, Database Design, Database Engine, Database and Application Architecture, Data Base Users and Administrators.

Introduction to the Relational Model: Structure of Relational Databases, Database Schema, Keys, Schema Diagram, Relational Query Languages, The Relational Algebra

UNIT-II

Data Models and Database Design:

Entity-Relationship (ER) Model: The Entity-Relational Model, Complex Attributes, Mapping Cardinalities, Primary key, Removing Redundant Attribute in Entity Set, Reducing E-R diagrams to Relational Schemas, Extended E-R features, Entity-Relationship Design Issues, Alternative Notations for Modelling Data.

Relational Model: Features of Good Relational Designs, Decomposition Using Functional Dependencies, Normal Forms, Functional-Dependency Theory, algorithms for Decomposition using Functional Dependencies, Decomposition Using multivalued Dependencies, Atomic Domains and First Normal Form, Database-Design process, Modelling Temporal Data

UNIT-III

SQL and Querying: SQL Basics: Data definition, data manipulation, and data control languages. functions in sql (single row and multi row& conversion functions), Creating Tables, keys, integrity constraints (column level and table level)

Advanced SQL: Joins, subqueries, aggregate functions, and views. Synonyms

Stored Procedures and Triggers: Concepts and usage.

UNIT-IV

Transaction Management and Concurrency Control:

Transaction Concepts: Transaction Concept, transaction states, A simple transaction Model, Implementation of Atomicity and Durability, Implementation of Isolation, Serializability (view Serializability, conflict serializability)

Concurrency Control: Locking mechanisms, Lock-based protocol, Timestamp-Based Protocol, Validation Based Protocol, Multiple Granularity, deadlock handling.

Recovery Techniques: Failure Classification, Storage Structure, Recovery and Atomicity, Recovery Algorithm, Buffer Management, Failure with Loss of Non-Volatile Storage, High Availability Using Remote Backup Systems, ARIES, Early Lock Release and Logical Undo Operations, Recovery in Main-memory Databases.

UNIT - V

Indexing and Hashing:

Database-System Architectures: Centralized Database Systems, Server System Architectures, Parallel Systems, Distributed Systems, Transaction Processing in Parallel and Distributed Systems, Cloud-Based Services.

Introduction to Big Data: Big Data Storage Systems, The Map Reduce Paradigm, Beyond Map Reduce, Algebraic Operations, Streaming Data, Graph Databases

| | Course Objectives: |
|---|---|
| 1 | To understand the processor selection criteria for Embedded System Design. |
| 2 | To provide a clear understanding of role of firmware, operating systems in correlation with hardware systems. |
| 3 | To gain the knowledge of tool chain for embedded systems. |
| 4 | To understand the importance of RTOS in building real time systems |
| 5 | To gain knowledge on internal working procedure of RTOS |

| | Course Outcomes: | | | | | | | | |
|---|---|--|--|--|--|--|--|--|--|
| | On completion of this course, the student will be able to: | | | | | | | | |
| 1 | Understand the working of a simple embedded system and embedded system applications | | | | | | | | |
| 2 | Design an Embedded System firmware | | | | | | | | |
| 3 | Use Embedded Software Development Tools for Designing Embedded System Applications | | | | | | | | |
| 4 | Understand RTOS and its use in Embedded environment | | | | | | | | |
| 5 | Understand RTOS concepts like Task Communication and Task Synchronization. | | | | | | | | |

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction to Embedded Systems:

Embedded systems Vs General computing systems, History of Embedded systems, classification, Characteristics and quality attributes of Embedded Systems Challenges in Embedded System Design, Application and Domain specific Embedded Systems.

UNIT-II

Embedded firmware and Design and Development:

Embedded Firmware Design Approaches and Development languages and Programming in Embedded C

UNIT-III

Embedded Software Development Tools:

Host and Target Machines, Cross Compilers, Cross Assemblers, Tool Chains, Linkers/Locators for Embedded Software, Address Resolution, Locator Maps. Getting Embedded Software Into Target System: PROM programmer, ROM emulator, In Circuit- Emulators, Monitors, Testing on Your Host Machine - Instruction Set Simulators, Logic Analyzers.

UNIT-IV

Introduction to Real Time Operating Systems:

Tasks and task states, tasks and Data, Semaphores and shared data. Operating system services: Message queues, mailboxes and pipes, timer functions, events, memory management, Interrupt routines in an RTOS environment.

UNIT - V

TASK COMMUNICATION:

Shared Memory, Message Passing, Remote Procedure Call and Sockets, Task Synchronization: Task Communication/Synchronization Issues, Task Synchronization Techniques, Device Drivers, How to Choose an RTOS.

UNIT-I

Introduction to the Internet of Things, Characteristics of IoT, Physical design of IoT, Functional blocks of IoT, Sensing, Actuation, Basics of Networking, Communication Protocols.

UNIT-II

IoT Architecture: Physical and Logical design of IoT, IoT frameworks, IoT Protocols – MQTT, COAP, 6LOWPAN

UNIT-III

Introduction to Python programming, Introduction to Raspberry Pi, Interfacing Raspberry Pi with basic peripherals, Implementation of IoT with Raspberry Pi..

UNIT-IV

IoT applications in home, Infrastructures, Buildings, Security, Industries, Home appliances, other IoT electronic equipments.

UNIT-V

Prototyping and Programming for IoT: Sensors, Actuators, Micro Controllers, SoC, Choosing a platform, prototyping hardware platforms- Arduino, Raspberry Pi, Prototype in Physical design- Laser Cutting, 3D-Printing, CNC milling, techniques for writing Embedded code

| | Course Objectives: |
|---|--|
| | The course is taught with the objectives of enabling the student to: |
| 1 | To understand the need and basic concepts of operations research and classify the optimization problems. |
| 2 | To study about the linear programming and non-linear programming concepts and their applications. |
| 3 | To understand various constrained and un-constrained optimization techniques and their applications. |
| 4 | To understand the concepts and implementation of Genetic Algorithms to get the optimum solutions. |
| 5 | To study the concepts of Metaheuristics Optimization techniques. |

| Course | Course Outcomes: | | | | | | | |
|--------|---|--|--|--|--|--|--|--|
| On com | apletion of this course, the student will be able to: | | | | | | | |
| CO-1 | Analyze any problem of optimization in an engineering system and able to formulate a mathematical model to the problem and solving it by the techniques that are presented. | | | | | | | |
| CO-2 | Solve problems of L.P. by graphical and Simplex methods. | | | | | | | |
| CO-3 | Apply various constrained and un-constrained optimization techniques for the | | | | | | | |

| | specific problems. |
|------|--|
| CO-4 | Implement the Genetic Algorithms to solve the for optimum solution. |
| CO-5 | Understand the concepts to use the Metaheuristics Optimization techniques. |

Articulation matrix of Course Outcomes with POs:

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Introduction: Definitions, Characteristics, Objective function, Classification of optimization problems, Engineering applications and limitations. Single-Variable Optimization, Multivariable Optimization with No Constraints, Multivariable Optimization with Equality Constraints and Multivariable Optimization with Inequality Constraints: Kuhn–Tucker Condition.

UNIT-II

Linear Programming: Definitions and Formulation of the LPP, Construction of L.P. Models, Slack and surplus variables, Standard form, Canonical form and matrix form of LP Problems. Artificial Variables, solution by the Big-M method, Duality principle, Dual problems and numerical problems.

UNIT-III

Random Search Methods Concepts: Direct Search Methods - Univariate Method, Gradient of a Function, Indirect Search Methods - Gradient of a Function, Steepest Descent (Cauchy) Method, Newton's Method.

UNIT-IV

Binary Genetic Algorithm: Genetic Algorithms Natural Selection on a Computer, Components of a Binary Genetic Algorithm. Selecting the Variables and the Cost Function. Variable Encoding and Decoding, The Population, Natural Selection, Selection, Mating.

Mutations, the Next Generation and Convergence, Components of a Continuous Genetic Algorithm.

UNIT – V

Meta-heuristics Optimization: Concepts of Simulated Annealing, Theoretical approaches, Advantages and disadvantages, applications, Ant Colony Algorithms - Introduction, Collective behavior of social insects, Formalization and properties of ant colony optimization.

| 1 | To understand the different types of energy sources. | | | | | | | |
| 2 | To understand the need of non-conventional energy sources and their principles. | | | | | | | |
| 3 | To understand the limitations of non-conventional energy sources. | | | | | | | |
| 4 | To outline division aspects and utilization of renewable energy sources for diriment application. | | | | | | | |
| 5 | To analyze the environmental aspects of renewable energy resources. | | | | | | | |

| | Course Outcomes: |
|------|---|
| | On completion of this course, the student will be able to : |
| | T |
| CO-1 | different energy resources and need of renewable energy resources. |
| CO-2 | nd the concepts of working of fuel cell systems along with their applications. |
| CO-3 | Describe the use of solar energy and the various components and measuring devices used in the energy production and their applications. |
| CO-4 | Appreciate the need of Wind Energy and their classification and various components |

| | used in energy generation and working of different electrical wind energy system. |
|------|---|
| CO-5 | Understand the concept of OTEC technology, Biomass energy resources and different types of biogas Plants used in India. |

Articulation matrix of Course Outcomes with POs:

Correlation rating: Low / Medium / High: 1 / 2 / 3 respectively.

UNIT-I

Review of Conventional and Non-Conventional energy sources, Need for non-conventional energy sources Types of Non-conventional energy sources, Fuel Cells, Principle of operation with special reference to H2O2 Cell, Classification and Block diagram of fuel cell systems, Ion exchange membrane cell, Molten carbonate cells, Solid oxide electrolyte cells, Regenerative system, Regenerative Fuel Cell, Advantages and disadvantages of Fuel Cells, Polarization, Conversion efficiency and Applications of Fuel Cells.

UNIT-II

Solar energy, Solar radiation and its measurements, Solar Energy collectors, Solar Energy storage systems, Solar Pond, Application of Solar Pond, Applications of solar energy.

UNIT-III

Wind energy, Principles of wind energy conversion systems, Nature of wind, Power in the

Wind, Basic components of WECS, Classification of WECS, Site selection considerations, Advantages and disadvantages of WECS, Wind energy collectors, Wind electric generating and control systems, Applications of Wind energy, Environmental aspects.

UNIT-IV

Energy from the Oceans, Ocean Thermal Electric Conversion (OTEC) methods, Principles of tidal power generation, Advantages and limitations of tidal power generation, Ocean waves, Wave energy conversion devices, Advantages and disadvantages of wave energy, Geothermal Energy, Types of Geo-thermal Energy Systems, Applications of Geo-thermal Energy.

UNIT-V

Energy from Biomass, Biomass conversion technologies / processes, Photosynthesis, Photosynthetic efficiency, Biogas generation, Selection of site for Biogas plant, Classification of Biogas plants, Details of commonly used Biogas plants in India, Advantages and disadvantages of Biogas generation, Thermal gasification of biomass, Biomass gasifies.

UNIT-I

Creativity & Discovery: Definition of Creativity, self test creativity, discovery and delivery skills, The imagination threshold, Building creativity ladder, Collection of wild ideas, Bench marking the ideas, Innovative to borrow or adopt, choosing the best of many ideas, management of tradeoff between discovery

and delivery, Sharpening observation skills, reinventing self, Inspire and aspire through success stories

UNIT-II

From Idea to Startup: Introduction to think ahead backward, Validation of ideas using cost and strategy, visualizing the business through value profile, activity mapping, Risks as opportunities, building your own road map.

UNIT-III

Innovation career lessons: Growing & Sharing Knowledge, The Role of Failure In Achieving Success, Creating vision, Strategy, Action & Resistance: Differentiated Market Transforming

Strategy; Dare to Take Action; Fighting Resistance; All About the startup Ecosystem; Building a Team; Keeping it Simple and Working Hard.

UNIT-IV

Action driven business plan: Creating a completed non-business plan (a series of actions each of which moves your idea toward implementation), including a list of the activities to be undertaken, with degrees of importance (scale of 1 to 3, where 1 is 'most important'). A revision of the original product or service idea, in light of information gathered in the process, beginning to design the business or organization that will successfully implement your creative idea. Preparing an activity map.

$\overline{UNIT - V}$

Startup financing cycle: Preparing an initial cash flow statement, showing money flowing out (operations; capital) and flowing in. Estimate your capital needs realistically. Prepare a bootstrapping option (self financing). Prepare a risk map. Prepare a business plan comprising five sections: The Need; The Product; Unique Features; The Market; Future Developments. Include a Gantt chart (project plan –detailed activities and starting and ending dates); and a project budget.

Microwave Source Characteristics

Reflex Klystron characteristics,

Gun diode characteristics.

Waveguide Component characteristics

Measurement of standing wave pattern, VSWR measurement, Low &High VSWR measurements

Measurement of unknown load characteristics of windows..

Measurement of Frequency, Wavelength, group and phase velocity.

Directional Coupler characteristics, Coupling, Directivity and Isolation Measurements.

E plane, H plane and Magic Tee characteristics.

Characteristics of Circulator, Isolator, Measurement of S-parameters through insertion loss and isolation.

Antenna Measurements

Plot Radiation pattern of all Wired Antenna.

Plot Radiation pattern of all Aperture Antenna.

Plot Radiation pattern of all Reflector Antenna.

Plot Radiation pattern of all Array Antenna.

Measurement in co-polarization and cross polarization.

Circularly polarized antenna.

Transmission Line Measurements

Measure the characteristics of Standing Wave.

Measure the characteristics of OPEN &SHORT LOAD.

Measurement of S-parameters (S11, S12, S21, S22).

The department can initiate the project allotment procedure at the end of VI semester and finalize it in the first two weeks of VII semester.

The department will appoint a project coordinator who will coordinate the following:

- 1. Collection of project topics/ descriptions from faculty members (Problems can also be invited from the industries)
- 2. Grouping of students (max 3 in a group)
- 3. Allotment of project guides.
- 4. Preparation of seminar schedules and conducting the same

The aim of project work should be to develop solutions to realistic problems applying the knowledge and skills obtained in different courses, new technologies and current industry practices. This requires students to understand current problems in their domain and methodologies to solve these problems. To get awareness on current problems and solution techniques, the department may arrange special lectures by faculty members, research scholars, post graduate students of the department and invited lectures by engineers from industries and R&D institutions during first 4 weeks of VII semester. After completion of these seminars each group has to formalize the project proposal based on their own ideas or as suggested by the project guide

Seminar schedule will be prepared by the coordinator for all the students from the 6^{th} week to the last week of the semester which should be strictly adhered to.

Each group will be required to:

- 1. Submit a one page synopsis at least 1 week before the seminar for display on notice board.
- 2. Give a 30 minutes presentation followed by 10 minutes discussion.
- 3. Submit a technical write-up on the talk.

At least two teachers will be associated with the Project Seminar to evaluate students for the award of Sessional marks which will be on the basis of performance of the student in literature survey, presentation and technical write up preparation and knowledge in the chosen topic.

Thus the seminar presentation should include the following components related to the project:

- 1. Problem definition and specifications
- 2. Literature survey
- 3. Broad knowledge of available techniques to solve a particular problem.
- 4. Planning of the work, preparation of bar (activity)charts
- 5. Presentation-oral and written.

Summer Intern ship is introduced as part of the curricula for encouraging students to work on problems of interest to industries. A batch of two or three students will be attached to a person from an Electronics Industry / R& D Organization / National Laboratory/Any other program approved by the department for a period of 6-8 weeks. This will be during the summer vacation following the completion of the VI semester course. One faculty member will act as an internal guide for each batch to monitor the progress and interacts with the industry guide.

After the completion of the project, students will submit a brief technical report on the project executed and present the work through a seminar talk to be organized by the department. Award of Sessional marks are to be based on the performance of the student at the work place to be judged by industry guide and internal guide (25 Marks) followed by presentation in front of the committee constituted by the department (25 Marks). One faculty member to coordinate the overall activity of Summer Internship.

*Students have to undergo summer intern ship of 6 Weeks duration at the end of semester VI and credits will be awarded after evaluation in VII semester

UNIT-I

Environmental studies: Definition, scope and importance, need for public awareness. Natural resources: Water resources use and exploitation of Surface and Ground water. Floods, Drought,

Conflicts over water, Dams-merits and demerits. Land Resources: Land as a resource, Effects of modern Agriculture, Fertilizer-pesticide problems, Water logging and Salinity, land degradation, soil erosion and Desertification. Energy resources: Growing energy needs, renewable and non-renewable energy resources.

UNIT-II

Ecosystems and Biodiversity: Concept of Ecosystem, structure and function of an ecosystem, producers, consumers and decomposers, energy flow in ecosystem, food chains, food web, ecological pyramids, aquatic ecosystem (ponds, lakes, streams, rivers, oceans, estuaries) Biodiversity: Genetic species and ecosystem diversity, bio-geographical classification of India. Value of biodiversity, threats to biodiversity, endangered and endemic species of India, conservation of biodiversity.

UNIT-III

Environmental Pollution: Causes, effects and control measures of air pollution, water pollution, soil pollution, noise pollution, Thermal pollution. Solid waste management, Municipal solid waste management, Biomedical waste management and, hazardous waste management. Disaster management: Types of disasters, impact of disasters on environment, infrastructure, and development.

UNIT-IV

Environmental protection and Global issues: Environmental protection acts: Air, Water, Forest and wild life Acts, enforcement of Environmental legislation. Water conservation, watershed management, and Environmental ethics. Climate change, Global warming, acid rain, ozone layer depletion.

UNIT - V

Sustainable future: Concept of Sustainable Development, Sustainable development goals, Population and its explosion, Crazy Consumerism, Urban Sprawl, Environmental Education, Human health, Environmental Ethics, Concept of Green Building, Ecological Foot Print, Life Cycle assessment (LCA), Low carbon life style

Chapter – I

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

Chapter - II

Trade Marks: Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting, and evaluating trade mark, trade mark registration processes.

Chapter - III

Law of copy rights: Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law. Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer.

Chapter – IV

Trade Secrets: Trade secrete law, determination of trade secrete status, liability for misappropriations of trade secrets, protection for submission, trade secrete litigation. Unfair competition: Misappropriation right of publicity, false advertising.

Chapter -V

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

| MC 803 HS | ENGLISH FOR RESEARCH PAPER WRITING | | | | | | | | | |
|-----------------|------------------------------------|----------|---|-----|------|-------|--|--|--|--|
| AUDIT COURSE-II | | | | | | | | | | |
| Pre-requisites | | | L | T | P | C | | | | |
| | | | 3 | - | - | 0 | | | | |
| Evaluation | SEE | 60 Marks | | CIE | 40 N | Marks | | | | |

Objectives:

- 1. Understand that how to improve your writing skills and level of readability
- 2. Understand the nuances of language and vocabulary in writing a Research Paper.
- 3. Develop the content, structure, format of writing a research paper and produce original research papers without plagiarism

Outcomes: At the end of this course, students will be able to:

- 1. Interpret the nuances of research paper writing.
- 2. Differentiate the research paper format and citation of sources.
- *3. To review the research papers and articles in a scientific manner.*
- 4. Avoid plagiarism and be able to develop their writing skills in presenting the research work.
- 5. Create a research paper and acquire the knowledge of how and where to publish their original research papers

UNIT – I

Academic Writing: Meaning& Definition of a research paper—Purpose of a research paper—Scope—Benefits, Limitations—outcomes.

UNIT - II

Research Paper Format: Title – Abstract – Introduction – Discussion – Findings, Conclusion – Style of Indentation – Font size/Font types – Indexing – Citation of sources.

UNIT - III

Research Methodology: Methods (Qualitative – Quantitative) Review of Literature. Criticizing, Paraphrasing & Plagiarism.

UNIT - IV

Process of Writing a research paper: Choosing a topic - Thesis Statement - Outline - Organizing notes - Language of Research - Word order, Paragraphs - Writing first draft - Revising/Editing - The final draft and proof reading.

UNIT - V

Research Paper Publication: Reputed Journals – National/International – ISSN No, No. of volumes, Scopus Index/UGC Journals – Free publications - Paid Journal publications – Advantages/Benefits

Presentation Skills: Developing Persuasive Presentations, Structure of Presentation, Presentation Slides, Presentation Delivery, role of the audience, what to search and cite, how to establish credibility.

The aim of project work -II is to implement and evaluate the proposal made as part of project -I. Students can also be encouraged to do full time internship as part of project work-II based on the common guidelines for all the departments. The students placed in internships need to write the new proposal in consultation with industry coordinator and project guide within two weeks from the commencement of instruction.

The department will appoint a project coordinator who will coordinate the following:

- 1. Re-grouping of students -deletion of inters hip candidates from groups made as part of project work-I
- 2. Re-Allotment of internship students to project guides

3. Project monitoring at regular intervals

All re-grouping/re-allotment has to be completed by the 1nd week of VIIIth semester so that students get sufficient time for completion of the project.

All projects (internship and departmental) will be monitored at least twice in a semester through student presentation for the award of Sessional marks. Sessional marks are awarded by a monitoring committee comprising of faculty members as well as by the supervisor. The first review of projects for 25 marks can be conducted after completion of five weeks. The second review for another 25 marks can be conducted after 12 weeks of instruction.

Common norms will be established for the final documentation of the project report by the respective departments. The students are required to submit draft copies of their project report within one week after completion of instruction.
