

DEPARTMENT OF MECHANICAL ENGINEERING

***Scheme of Instruction
and
Syllabus of***

**M.E. (Mechanical Engineering)
TOOL DESIGN**

With effect from Academic Year 2026-2027

**UNIVERSITY COLLEGE OF ENGINEERING
(Autonomous)
Osmania University
Hyderabad – 500 007, TG, INDIA**

UNIVERSITY COLLEGE OF ENGINEERING, OSMANIA UNIVERSITY

VISION OF THE INSTITUTE

The Vision of the Institute is to generate and disseminate knowledge through a harmonious blending of Science, Engineering and Technology. To serve the society by developing a modern technology in students' heightened intellectual, cultural, ethical and humane sensitivities, fostering a scientific temper and promoting professional and technological expertise.

MISSION OF THE INSTITUTE

- To achieve excellence in Teaching and Research.
- To generate, disseminate and preserve knowledge.
- To enable empowerment through knowledge and information.
- Advancement of knowledge in Engineering, Science and Technology.
- Promote learning in free thinking and innovative environment.
- Cultivate skills, attitudes to promote knowledge creation.
- Rendering socially relevant technical services for the community.
- To impart new skills of technology development.
- To inculcate entrepreneurial talents and technology appreciation programmes.
- Technology transfer and incubation.

DEPARTMENT OF MECHANICAL ENGINEERING

VISION OF THE DEPARTMENT

To generate and disseminate knowledge in Mechanical Engineering and nurture professional, technical and scientific temper for serving the needs of the industry, research organizations and society.

MISSION OF THE DEPARTMENT

- Create technically competent mechanical engineers to suit the changing needs of global industry and society.
- To cultivate skills, attitudes to promote knowledge creation and technology development.
- Interact with prominent educational institutions and R&D organizations for enhancing teaching, research and consultancy services.

DEPARTMENT OF MECHANICAL ENGINEERING
M.E (Tool Design)
PROGRAM EDUCATIONAL OBJECTIVES

PEO-1	To provide students with in depth knowledge on advanced areas of Tool Design enabling them identify, analyse and solve complex engineering problems using computational tools.
PEO-2	To enable students to carryout innovative and independent research work in Tool Design with multidisciplinary applications duly considering economical and financial factors for solving industrial and societal needs.
PEO-3	To provide graduates with professional skills like communication, writing, presentation and management capabilities that enable them to become world class professionals, administrators and academicians.
PEO-4	To imbibe moral ethics and enthusiasm in students to engage in as a lifelong learning process.

PROGRAM OUTCOMES

At the end of the programme the student shall be able to:

PO-1	Ability to independently carry out research/ investigation and development work to solve practical problems
PO-2	Ability to write and present a substantial technical report/document
PO-3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program
PO-4	Apply the appropriate knowledge, techniques, skills and modern tools to solve tool design related problems
PO-5	Ability to collaborate and develop optimal solutions for manufacturing a product.

AICTE-Model Scheme
Scheme of Instructions & Examinations
M.E. (Mechanical Engineering) 4 Semesters (Full Time)

M.E. (Mechanical Engineering) - 4 Semesters (1st Year)						
S. No.	Course Name	Contact hours per week		Scheme of Examination		Credits
		L	P	CIE	SEE	
	SEMESTER-I					
1.	Core-I	3	-	40	60	3
2.	Core-II	3	-	40	60	3
3.	Core-III	3	-	40	60	3
4.	Program Elective-I	3	-	40	60	3
5.	Program Elective-II	3	-	40	60	3
6.	Program Elective-III	3	-	40	60	3
7.	Laboratory-I	0	2	50	-	1
8.	Seminar	0	2	50	-	1
	TOTAL	18	4	340	360	20
	SEMESTER-II					
1.	Core-IV	3	-	40	60	3
2.	Core-V	3	-	40	60	3
3.	Core-VI	3	-	40	60	3
4.	Program Elective-IV	3	-	40	60	3
5.	Program Elective-V	3	-	40	60	3
6.	Open Elective	3	-	40	60	3
7.	Mini Project	-	4	50	-	2
8.	Laboratory-II	-	2	50	-	1
9.	Laboratory-III	-	2	50	-	1
	TOTAL	18	8	390	360	22
	SEMESTER-III					
1.	Audit Course-I (Online)	2	-	40	60	0
2.	Audit Course-II (Online)	2	-	40	60	0
3.	Dissertation-I	-	20	100		10
	TOTAL	4	20	180	120	10
	SEMESTER-IV					
1.	Dissertation Phase-II	-	32	100	100	16
	GRAND TOTAL	40	64	1010	940	68

Note:

- Dissertation-II has two parts, CIE - I and CIE – II, at the end of 8th week and 16th respectively for evaluation of 50 marks each.
- Audit Courses will be offered in ONLINE mode and SEE will be conducted in Computer Based Test Mode.
- Research Methodology in Mechanical Engineering will be offered as an Audit Course for all PG Programs.
- Engineering Research Methodology Workshop will be conducted for one week for Ph.D scholars.

CIE: Continuous Internal Evaluation

EE: Semester End Examination

ME401	DESIGN OF PRESS TOOLS					
(CORE - I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To learn the types presses, press tool operations and force calculations and strip layout.
- To understand the various classification of dies, terminology of press tool elements and alignment system design of press tools.
- Learn the design of various dies and principles of design considerations.
- Understand and design of forming dies.

Course Outcomes: At the end of the course, student will be able to

CO's	Description	Blooms Level
CO1	Select a suitable press for the given component. Design an economical strip layout to maximize material utilization. Determine and apply the appropriate punch-and-die clearances while dimensioning the shearing elements for the press tool.	L2
CO2	Design the various elements of the press tool according to the type of die and the selected press. Apply shear to the punch and/or die, wherever necessary, to reduce the cutting force.	L4
CO3	Design an appropriate type of die based on the required product quality, production quantity, and component configuration. Differentiate between fine blanking and conventional blanking, justify the selection of the suitable process, and design the die accordingly.	L4
CO4	Decide the type of bending die and design accordingly. Provide necessary correction for spring back. Differentiate between bending and stretch forming.	L3
CO5	Design draw die to suit mechanical or hydraulic press. Understand and consider the various metal forming techniques. Understand drawing and redrawing and can develop a blank and number of stages.	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	2	1
CO2	3	3	2	2	1
CO3	3	3	2	3	1
CO4	3	3	2	3	1
CO 5	3	3	2	3	1

UNIT– I

Classification of presses– Specification of Presses– Safety Devices in Presses– Principles of loading and unloading equipment– Various press tool operations– Selection of types of presses – Theory of shearing– Clearance concept–Location of clearance for regular and irregular shapes– Analysis of forces– Force, power & energy–Stock strip terms–Layouts–Economic utilization–Dimensioning of punches and die openings with tolerance.

UNIT– II

Classification of dies viz. shearing, bending, drawing & forming– Terminology of press tool elements–Design considerations of various elements viz. die plates, stock guides, strippers & types–Shedders– Stops- function and types– Pilots- function and types– Punches types– Punches mounted in punch holder– Calculation of spring, rubber, ejector–Shear and its application– Types of shear (cutting with inclined edges)– Alignment system design of press tools.

UNIT– III

Design of dies– Simple piercing/blanking–Inverted die– Compound die– Progressive dies–Rules for developing stock– Strip layouts for progressive dies– Types of progressive dies viz. blank through, slug cutoff and shear cutoff–Load centre– Necessity– Analytical and graphical method to determine load centre (i.e. centre of pressure)– Miscellaneous dies– Shaving, Horn, Cam actuated and precision lamination dies– Fine blanking dies– Principles-design considerations.

UNIT– IV

Bending dies– Theory of bending–Blank development– Spring back effect– Spring back factor– Methods of correction to overcome spring back – both practical and theoretical– Types of bending dies viz. V, U and L– Pressure pad dies– Forces in bending– Construction and working principles– Press brake Tooling– Curling–Flanging– Principles of stretch forming– Stretch forming dies.

UNIT– V

Drawing and forming: Definition of drawing, redrawing, reverse redraw–Theory of drawing for metal flow in cylindrical shells– Blank development– Algebraic-centre of gravity, segment area and layout method– Severity of draw– Reduction– Strain factor– Draw force calculation– Draw die edge radius consideration– Blank holder– Stages in draw dies– Calculations– Drawing of rectangular components– Blank development– Draw-beeds–Ironing–Defects in draw – Modern metal forming techniques viz. rubber pad forming, explosive forming, magnetic pulse forming, roll forming– Awareness of various software for sheet metal operations, both for analysis and design.

ME402	DESIGN OF JIGS–FIXTURES AND CUTTING TOOLS					
(CORE - I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To learn the fundamentals of single point and multi point cutting tools.
- To understand the working principle of jigs & fixtures and their applications.
- To design the various types and elements of jigs & fixtures.
- To understand types, principle and applications various gauges.

Course Outcomes: At the end of the course, student will be able to

CO's	Description	Blooms Level
CO1	Select/design a suitable standard cutting tool or special tool as to the need of the job & machining process- Drilling, Turning & Deep hole drilling.	L2
CO2	Select/Design an appropriate cutting tool to perform Milling, Threading, Gear cutting & Broaching operations.	L2
CO3	Concave proper location, clamping technique, utilizing standard elements while designing a suitable jig or a fixture to achieve job tolerance.	L3
CO4	Design an efficient & economic jig or a fixture for various Machining operations as to the product requirement. Understand and able to conceive the	L4
CO5	Decide & Design a suitable Gauge for checking a Job with given tolerance and feature.	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	2	1
CO2	3	3	2	2	1
CO3	3	3	2	2	1
CO4	3	3	2	3	1
CO 5	3	3	2	3	1

UNIT-I

Cutting Tools: Development of cutting tool materials. Design of single point tools for turning Nomenclatures of single point Cutting tools, Inserts & Holders. Calculations of tool profile for Flat

Form tools & Circular Form tools. Design-Nomenclatures of Drills, Reamers, Boring tools. Deep hole drilling methods & Tools. Exercise on Form tools & Drilling Cutter for the given job.

UNIT-II

Milling Cutters–types, design calculation & details. Methods for thread cutting & forming–Design of threading Taps & circular threading Dies. Gear cutting & generation methods–involute geometry for gears, conjugate profile–Design of hobs. Broaching process & types. Design of broaches. Design of tools for CNC machines. Exercise on Broaches,

UNIT-III

Jigs & Fixtures: Tolerance analysis and procedure of designing. The economic calculations, Principles of location of the work piece, degree of freedom, reference surfaces, resting components & redundancy. 3-2-1 & 4-2-1, Flat, Concentric, Vee, Radial & Self-centring locations. Application of Diamond pin. Fixed & Adjustable Resting elements. Clamping principles and methods of clamping. Application of standard elements viz Strap, C, Floating pad Spherical washer etc. Equalizers & Quick clamping methods. Jig Bushes–design & types. Cutter setting blocks.

UNIT-IV

Design principles of Jigs & Fixtures. Design of Drill Jigs & types viz. Plate, Post, Box, Leaf, Invertible, indexing etc. Design of milling fixtures. Application & design of standard & special accessories for turning operations. Lathe fixtures on the face plate. Design of broaching fixtures. Introduction to Inspection, Welding, Assembly & CNC fixtures. Exercises on design of Drill Jigs, Milling & Turning fixtures. Use of various softwares for design & analysis.

UNIT-V

Gauges: Plain limit gauges: Review of systems of tolerances, fits and tolerance analysis (IS:919, 170) Taylors principles and its applications. Calculation of dimensions and design details of plain gauges: Study of standard tapers and methods of dimensioning. Thread Gauges. Types and design calculations of spline gauges–Functional Gauges–CNC Gauging. Exercise on Design of plain Gauges, Taper Gauges, and Thread Ring Gauges.

ME403	METAL CUTTING & FORMING					
(CORE - I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To understand the types and properties of cutting tools and their applications to various metals.
- To know the cutting forces, temperature, tool wear and tool life.
- To learn the principles and types of conventional and unconventional deformation methods.

COs	Description	Blooms Level
CO1	Develop interrelations among ASA, ORS and NRS systems of tool geometry.	L2
CO2	Analyze cutting forces, temperature, power and specific energy along the shear and rake Planes	L4
CO3	Understand the Tool Wear, Tool life and Machinability concepts	L3
CO4	Understand the mechanism of plastic deformation of metals	L3
CO5	Know the principle and applications of un-conventional forming techniques	L4

Program Articulation Matrix

Course Outcome	Program Outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	3	1
CO2	3	3	1	3	1
CO3	3	2	1	2	1
CO4	3	3	2	3	1
CO 5	3	2	1	2	1

UNIT-I

Tool Materials: Desirable Properties of tool materials, Types of Cutting Tool Materials, Indexable inserts, Coated tools, Orthogonal and Oblique cutting, Classifications of cutting tools, Chip formation, Types of chips, Cutting tool geometry, various methods of tool nomenclature and their relationships. Theoretical Determination of shear angle and cutting forces: Shear plane theory–Merchant’s models, Lee and Shaffer’s model. Velocity relationships, Workdone in cutting.

UNIT-II

Dynamometry: Dynamometer requirements –Strain gauges for Force measurements – Electric

transducers. Types of dynamometers-Lathe, milling and grinding dynamometers. **Cutting Temperatures** : Shear Plane temperature, Average chip-tool interface temperature-Distribution of shear plane temperature, Measurement of temperature by radiation pyrometer, tool-work thermo couple, Photo cell, and Photographic method.

UNIT-III

Tool Wear, Tool life and Machinability: Mechanism of tool wear-Adhesive, Abrasive, Diffusive and Chemical wear-Taylor's tool life equation. Cutting Fluids-Direction of fluid application-Chip curl-economics of machining -Comparison of machinability of different metals. Recent development in metal cutting: Hot machining. Rotary machining- High speed machining.

UNIT-IV

Plastic Deformation: Factors affecting plastic deformation, Strain hardening behavior. Variables affecting Stress-strain curves, Ideal & Practical stress-strain curves. Cold working, warm working and hot working. Plasticity cycle. Tresca's and Von Mises's yield criteria under complex states of stress, including Plane stress & Plane strain condition. Rolling: Principle of rolling, process parameters. Estimation of rolling loads. Principles of roll pass design for various product shapes. Principles of ring rolling.

UNIT-V

Unconventional Methods In Metal Forming: High energy rate forming. Merits and limitations of HERF Processes. Principle, merits, limitations and applications. Explosive forming, electro-magnetic forming, electro-hydraulic forming and water hammer forming, Rubber pad forming.

ME111	AI IN MANUFACTURING					
(Program Elective-I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- Understand the basic concepts of Artificial Intelligence and its role in manufacturing.
- Identify AI applications in production, quality control, and maintenance.
- Explain how AI supports smart manufacturing and Industry 4.0.
- Analyze simple manufacturing problems using AI-based approaches.
- Recognize future trends in AI-enabled manufacturing systems..

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
CO1	Explain the fundamentals of Artificial Intelligence and its applications in	L2
CO2	Identify AI techniques used in manufacturing processes and production systems.	L2
CO3	Apply AI concepts for quality control, predictive maintenance, and process monitoring.	L3
CO4	Explain the role of AI in smart factories, robotics, and Industry 4.0.	L4
CO5	Evaluate the benefits and challenges of AI in modern manufacturing industries.	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5

CO2	2	2	2	1	2
CO3	2	2	2	2	3
CO4	1	3	3	2	2
CO 5	1	2	2	2	2

UNIT - I

Introduction to Artificial Intelligence: History and Evolution of AI, AI vs Conventional Programming, Types of Artificial Intelligence, Machine Learning, Deep Learning and Generative AI (Overview), AI Applications in Mechanical Engineering, Benefits and Challenges of AI

UNIT - II

AI Applications in Manufacturing: Introduction to Smart Manufacturing, AI in Production Planning, AI in Manufacturing Processes, AI for Production Scheduling, AI in Inventory Management, AI in Supply Chain Management, Industrial Case Studies

UNIT - III

AI for Quality and Maintenance: Quality Control in Manufacturing, AI-based Defect Detection, Machine Vision Systems, Predictive Maintenance, Condition Monitoring, Tool Wear Monitoring, Fault Diagnosis

UNIT - IV

AI in Smart Manufacturing: Industry 4.0 Concepts, Industrial Internet of Things (IIoT)., Smart Sensors, Robotics and Cobots, Digital Twin (Introduction), Automated Manufacturing Systems, Human–Machine Collaboration

UNIT - V

Future Trends of AI in Manufacturing: Generative AI in Manufacturing, AI in Additive Manufacturing, Sustainable Manufacturing using AI, AI for Energy Management, Ethical Issues in AI, Industry 5.0, Future Manufacturing Trends

Suggested Reading:

6. Bishop, C.M. and Bishop, H., *Deep Learning: Foundations and Concepts*, 1st Edition, Springer Nature, 2024.

ME112	COMPUTER INTEGRATED MANUFACTURING					
(Program Elective-I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To familiarize students the fundamental concepts of CIM and the Importance of Concurrent engineering
- To understand the role of database management systems, concepts like CAPP, MRP, Cellular manufacturing, FMS and various networking technologies in the successful implementation of CIM.
- To learn the concepts of Lean, Agile, Web based Manufacturing systems and their role in a CIM environment.

Course outcomes: After completion of the course student will be able to:

CO's	Description	Blooms Level
CO1	Interpret the meaning and scope of CIM	L2
CO2	Apply the knowledge of Database Management System in writing SQL Statements for creating and manipulating manufacturing databases	L3
CO3	Illustrate the working of CAPP, MRP, FMS and Solve problems on cell formation approaches and lot sizing techniques	L3
CO4	Select various types of network technologies that will help in establishing Enterprise-wide integration	L4
CO5	Illustrate the working of Lean, Agile and Web Based Manufacturing systems	L3

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	1	2	1	1
CO2	3	2	3	1	
CO3	3	2	3	1	

CO4	1	2	2	1	
CO 5	1	3	1	2	

Unit – I

Introduction to CIM: The meaning of Manufacturing, Types of Manufacturing; Basic Concepts of CIM: CIM Definition, Elements of CIM, CIM wheel, concept or technology, Evolution of CIM, Benefits of CIM, Needs of CIM: Hardware and software. Concurrent Engineering: Definition, Sequential Engineering Versus Concurrent Engineering, Benefits of Concurrent Engineering,

Characteristics of concurrent Engineering, Framework for integration of Life-cycle phases in CE, Concurrent Engineering Techniques, Product Life-Cycle Management (PLM).

Unit – II

CIM database and database management systems: Introduction, Manufacturing Data: Types, sources; Database Terminology, Database requirements, Database models, Database Management System, DBMS Architecture, Query Language, Structural Query Language (SQL): Basic structure, Data definition Language (Create, Alter, Drop, Truncate, View), Data Manipulation Language (store, retrieve, update, delete). Illustration of Creating and Manipulating a Manufacturing Database. SQL as a Knowledge Base Query Language. Features of commercial DBMS: Oracle, MySQL, SQL Access, Sybase, DB2. Product Data Management (PDM), Advantages of PDM.

Unit – III

CIM Technology and Systems: Computer-Aided Process Planning: Basic Steps in developing a process plan, Variant and Generative Process Planning, Feature Recognition in Computer-Aided Process Planning. Material Requirements Planning (MRP): Lot Sizing Techniques: Lot for Lot (LFL), Fixed Order Quantity (FOQ), Periodic Order Quantity (POQ), Economic Order Quantity (EOQ), Fixed Period Requirement (FPR). Manufacturing Resource Planning (MRP –II). Cellular Manufacturing: Design of Cellular Manufacturing Systems, Cell Formation Approaches: Machine–Component Group Analysis, Similarity Coefficients-Based Approaches. Evaluation of Cell Design. Flexible Manufacturing Systems: Physical Components of an FMS, Types of FMS layouts, Operational Problems of FMS. FMS benefits.

Unit –IV

Enterprise-Wide Integration in CIM: Introduction to Networking, Principles of Networking, Network Terminology, Types of Networks: LAN, MAN, WAN; Selection of Network Technology: Communication medium, Network Topology, Medium access control Methods, Signaling methods; Network Architectures and Protocols: OSI Model.

Unit – V

Future Trends in Manufacturing Systems: Lean Manufacturing: Definition, Principles of Lean Manufacturing, Characteristics of Lean Manufacturing, Value of Product, Continuous Improvement, Focus on Waste, Relationship of Waste to Profit, Four Functions of Lean Production, Performance Measures, The Supply Chain, Benefits of Lean Manufacturing. Introduction to Agile and Web Based Manufacturing systems.

ME113	MANUFACTURING AUTOMATION					
(Program Elective-I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To learn the concepts and principles of manufacturing automation
- To understand the components of automation and their practical use in manufacturing application
- Learn principles of assembly systems and material handling systems.
- Understand quality control and other support systems used in automated system
- To provide information integration and data warehousing

Course Outcomes: At the end of the course, student will be able to

CO's	Description	Blooms Level
CO1	Understand the concepts and the effect of manufacturing automation strategies	L1
CO2	Apply the principles of automation	L3
CO3	Design automated material handling and storage systems	L4
CO4	Analyze automated flow lines and assembly systems and balance the line.	L3
CO5	Make use of automated inspection methods	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	2	--
CO2	3	2	1	1	--
CO3	3	3	1	2	--
CO4	3	3	2	2	--
CO 5	3	3	2	2	--

UNIT – I

Introduction: Definition of automation, Types of production, Functions of Manufacturing, Organization and Information Processing in Manufacturing, Production concepts and Mathematical Models, Automation Strategies, Production Economics: Costs in Manufacturing, Break-Even Analysis, Unit cost of production, Cost of Manufacturing Lead time and Work-in-process.

UNIT – II

Automation Production Lines: Automated Flow lines, Methods of Work part Transport, Transfer Mechanism, Buffer Storage, Control Functions, Automation for Machining Operations, Design and Fabrication Considerations. Analysis of Automated Flow Lines: General Terminology and Analysis, Analysis of Transfer Lines without Storage, Partial Automation, Automated Flow Lines with Storage Buffers, Simulation of Automated Flowlines.

UNIT – III

Assembly Systems and Line Balancing: The Assembly Process, Assembly Systems, Manual Assembly Lines, Methods of Line Balancing, Other ways to improve the Line Balancing, The Line Balancing Problem, Flexible Manual Assembly Lines. Automated Assembly Systems: Design for Automated Assembly, Types of Automated Assembly Systems, Part Feeding Devices, Analysis of Multi-station Assembly Machines, Analysis of a Single Station Assembly Machine.

UNIT –IV

Automated Materials Handling: The material handling function, Types of Material Handling Equipment, Analysis for Material Handling Systems, Design of the System, Conveyor Systems, Automated Guided Vehicle Systems. Automated Storage Systems: Storage System Performance, Automated Storage/Retrieval Systems, Carousel Storage Systems, Work-in- process Storage, Interfacing Handling and Storage with Manufacturing.

UNIT – V

Automated Inspection and Testing: Inspection and testing, Statistical Quality Control, Automated Inspection Principles and Methods, Sensor Technologies for Automated Inspection, Coordinate Measuring Machines, Other Contact Inspection Methods, Machine Vision, and Other optical Inspection Methods. The Future Automated Factory: Trends in Manufacturing, The Future Automated Factory, Human workers in the Future Automated Factory and the social impact.

ME115	INDUSTRY 4.0					
(Program Elective-I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To know the Main concepts and components of Industry 4.0
- To understand the role of data analytics, Internet of Things (IoT), robotics and augmented reality in the implementation of Industry 4.0
- To learn the working of various Additive Manufacturing (AM) Technologies, Virtual Factory and role of Cyber security in the successful implementation of Industry 4.0

Course outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
CO1	Interpret the meaning and scope of Industry 4.0	L2
CO2	Illustrate the role of Data Analytics and IoT in a Manufacturing Industry	L2
CO3	Recognise the role of Robotics and Augmented Reality in the implementation of Industry 4.0	L3
CO4	Identify the role of Additive Manufacturing Technology in Industry 4.0 and interpret the working of various AM technologies and their applications	L3
CO5	Analyse the role of virtual factory, digital traceability and Cyber Security in the implementation of Industry 4.0	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	
CO2	3	1	2	3	
CO3	2	2	3	3	
CO4	3	1	2	3	
CO 5	2	1	3	2	

Unit – I:

Introduction

Definition, Main concepts and components of Industry 4.0, Proposed Framework of Industry 4.0,

Smart and Connected Product Business Models, Smart Manufacturing, Lean Production Systems for Industry 4.0, The changing role of Engineering Education in Industry 4.0 Era, Industry 4.0 laboratories, Opportunities and Challenges of Industry 4.0, Future Skills required by Workers in the Industry 4.0 Era, Strategies for competing in an Industry 4.0 world.

Unit – II:

Data Analytics and Internet of Things in Manufacturing

Introduction to data analytics, Techniques used for Predictive Analytics, Forecast Accuracy Calculations, A real world Case Study; Introduction to IoT, Examples for IoTs Value Creation in Different Industries. IoTs Value Creation Barriers: Standards, Security and Privacy Concerns.

Unit – III:

Robotics and Augmented Reality in Industry 4.0

Introduction, Recent Technological Components of Robots: Advanced Sensor Technologies, Artificial Intelligence, Internet of Robot Things, Cloud Robotics, Cognitive Architecture for Cyber-Physical Robotics, Industrial Robotic Applications. Introduction to Augmented Reality: Augmented Reality Hardware and Software Technology, Industrial Applications of Augmented Reality

Unit – IV:

Additive Manufacturing Technologies and Applications

Introduction, Additive Manufacturing (AM) Technologies: Stereolithography, 3DP, Fused Deposition Modeling, Selective Laser Sintering, Laminated Object Manufacturing, Laser Engineered Net shaping, Advantages and Disadvantages of Additive Manufacturing. Applications of Additive Manufacturing in Medical, Surgical Planning, Implant and Tissue Design, Automotive, Aerospace, Electronics, Education and Oceanography. Impact of AM Technologies on society: Impact on health care, Environment, Manufacturing and Supply Chain.

Unit – V: Virtual Factory, Digital Traceability and Cyber Security

Introduction to Virtual Factory, Virtual Factory Software, Limitations of Commercial Software; Introduction to Digital Traceability, Digital Traceability Technologies, Architectural Framework, Applications, Project Management in Digital Traceability; Introduction to Cyber Security, Security Threats and Vulnerabilities of IoT, Industrial Challenges, Evolution of Cyber Attacks, Cases on Cyber Attacks and Solutions, Strategic Principles in Cyber Security, Cyber Security Measures.

ME116	MECHATRONICS AND INDUSTRIAL ROBOTICS					
(Program Elective-I)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives: After completion of the course student will be able to

- Model analyze and control engineering systems
- Select appropriate sensors, transducers and actuators to monitor and control the behavior of a process or product.
- Develop PLC programs for a given task.
- Evaluate the performance of mechatronic systems.
- Understand the evolution, classification, structures and drives for robots.

Course Outcomes

CO's	Description	Blooms Level
CO1	Learn the mechatronics system components and its construction	L1
CO2	Apply the sensors in designing of mechatronics systems	L2
CO3	Develop the new mechatronics system suitable to situation	L3
CO4	Create the new mechatronics systems for different application	L4
CO5	Explore the new mechatronics system	L5

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	1	2	3	3	
CO2	2	3	2	2	2
CO3	1	2	3	3	2
CO4	1	3	1	2	3
CO 5	2	2	3	2	3

UNIT I

Introduction: Introduction, elements of mechatronic systems, needs and benefits of mechatronics in manufacturing.

Design of Sensors: Classification of sensors basic working principles, Displacement Sensor Linear and rotary potentiometers, LVDT and RVDT, incremental and absolute encoders. Strain gauges. Force/Torque – Load cells. Temperature – Thermocouple, Bimetallic Strips, Thermistor, RTD.

Accelerometers, Velocity sensors – Tachometers, Proximity and Range sensors – Eddy current sensor, ultrasonic sensor, laser interferometer transducer, Hall Effect sensor, inductive proximity switch. Light sensors – Photodiodes, phototransistors, Flow sensors – Ultrasonic sensor, laser Doppler anemometer tactile sensors – PVDF tactile sensor, micro-switch and reed switch Piezoelectric sensors, vision sensor. Selection of appropriate sensor for real time applications.

UNIT II

Design of Actuator Circuits: Electrical Actuators : Solenoids, relays, diodes, thyristors, triacs, BJT, FET, DC motor, Servo motor, BLDC Motor, AC Motor, stepper motors. Hydraulic & Pneumatic devices – Power supplies, valves, cylinder sequencing. Development of Hydraulic & Pneumatic circuits for automation applications. Piezoelectric actuators, Shape memory alloys.

Basic System Models & Analysis: Modelling of one and two degrees of freedom mechanical, Electrical, Fluid and thermal systems, Block diagram representations for these systems. Dynamic Responses of System: Transfer function, Modelling Dynamic systems, first order systems, second order systems.

UNIT III

Digital Electronics: Number systems, BCD codes and arithmetic, Gray codes, self-complimenting codes, Error detection and correction principles. Boolean functions using Karnaugh map, Design of combinational circuits, Design of arithmetic circuits. Design of Code converters, Encoders and decoders.

Signal Conditioning: Operational amplifiers, inverting amplifier, differential amplifier, Protection, comparator, filters, Multiplexer, Pulse width Modulation Counters, decoders. Data acquisition – Quantizing theory, Analog to digital conversion, digital to analog conversion.

UNIT IV

Controllers: Classification of control systems, Feedback, closed loop and open loop systems, Continuous and discrete processes, control modes, Two step Proportional, Derivative, Integral, PID controllers.

PLC Programming: PLC Principles of operation PLC sizes PLC hardware components I/Section Analog I/O section Analog I/O modules, digital I/O modules CPU Processor memory module Programming. Ladder Programming, ladder diagrams, timers, internal relays and counters, data handling, analogue input and output. Application on real time industrial automation systems.

UNIT V

Case studies of Mechatronics systems: Pick and place robot, Bar code, Engine Management system, Washing machine etc.

Robotics: Introduction to Robotics, Robot anatomy physical configurations, Manipulator, Kinematics and dynamics, Technical features of Industrial robots.

Suggested Reading:

ME126	NON-DESTRUCTIVE EVALUATION TECHNIQUES					
(Program Elective-II)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Outcomes: After completion of the course student will be able to

Course objectives:

- To understand the need of NDT for defect detection in Industry.
- To learn the principles and techniques and applications of contact and Non-Contact type of NDT methods.
- To know the reference standards used for calibration and specifications related to NDT technology.
- To know the appropriate NDT method for various Industrial Inspection needs.

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
C01	Comprehend the basic principles of non-destructive testing (NDT) methods	L2
C02	Identify appropriate nondestructive testing methods for failure identification	L2
C03	Select NDT methods for quality analysis of industrial components	L3
C04	Analyse and interpret results from various NDT techniques along with calibration of these NDT.	L4
C05	Illustrate the advanced NDT techniques used in medical and non-medical field.	L2

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2		1	1
CO2	2	1		1	1
CO3	3	1	1	2	1
CO4	2	3	1	3	1
CO 5	2	2	1	1	1

UNIT-I

Types of defects and characteristics, Quantification aspects relevant for NDE including fracture aspects and stress intensity factors - NDT overview – quality assurance–visual inspection–

comparative features of conventional Non-destructive Testing and Evaluation Methods including Optical, Radiography, Ultrasonic Testing, Dye penetrant testing, Eddy current testing etc.

UNIT-II

Leak testing – liquid penetrant testing – penetrant used – equipment – penetration, emulsification, solvent removal. **Eddy current testing** – material conductivity – coil impedance– coils and instruments–testing in non-ferromagnetic conducting materials and ferro magnetic materials – skin effect – frequency used – inspection probes – phase analysis. **Magnetic particle testing**–magnetization methods–continuous and residual methods – sensitivity – demagnetization.

UNIT-III

Radiography–sources of radiation–shadow formation, enlargement and distortion – recording media – exposures, markers. **Ultrasonic testing** – generation of ultrasound – methodologies – transducers and equipment used – flaw detection - sensitivity and calibration. Computer aided image processing methods for radiography and ultrasonics, tomography in these areas. .

UNIT-IV

Optical techniques of non-destructive evaluation: Machine Vision-system components, Sensors, specifications for resolution & range. Use of fibre optics, Principles of Photo elasticity, holographic Interferometry; Laser speckle techniques and shearography, Grid and Moiré NDT.

UNIT-V

Principles of acoustic emission techniques – Instrumentation-analysis methods, Thermal testing: Infrared and Microwave Thermography– imaging systems – detectors – analysis methods, non- invasive techniques in medical field and NDT.

ME127	EXPERIMENTAL TECHNIQUES AND DATA ANALYSIS					
(Program Elective-II)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course objectives:

- To familiarize students with the machining processes forces on machine tool structures
- To understand the various process parameters affecting the components manufacturing both internal structure and external form features
- To study the effects of variables in experimental design methods and its verification tests
- To identify the robust method of experiment that given reliable and acceptable results

Course Outcomes:

CO's	Description	Bloom's Level
CO1	Estimate cutting force using strain gauges, transducers and strain by photo elasticity, holography, interferometer, Strain gauges.	L2
CO2	Estimate temperature by thermistors, electrical resistance, pyrometers, thermos couples, bimetallic etc and flow measurement by laser dopler, hot wire anemometer, ultrasonic, shadow graphs.	L4
CO3	Examine the microstructure of a given material under different working condition and Measurement of surface finish and surface roughness.	L3
CO4	Propose an appropriate statistical model for a given experimental data and estimate the contribution of each parameter by ANOVA	L3
CO5	Apply orthogonal array, optimize the response function and estimate loss function for experimental design	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	1		3	1	3
CO2	1		3	2	3
CO3	2		3	3	3
CO4	1	1	2	2	2
CO 5	2	1	2	2	3

UNIT – I

Measurement of Cutting Forces: Strain gauge and piezoelectric transducers and their characteristics. Dynamometer construction, Bridge circuits. Instrumentation and calibration. Displacement and strain measurements by photo-elasticity. Holography, interferometer, Moiré techniques, strain gauge rosettes.

UNIT – II

Temperature Measurement: Circuits and instrumentation for different transducers viz, bimetallic, expanding fluid, electrical resistance, thermistor, thermocouples, pyrometers. **Flow Measurement:** Transducers for flow measurements of Non-compressible and compressible fluids. Obstruction and drag methods. Vortex shedding flow meters. Ultrasonic, Laser Doppler and Hotwire anemometer. Flow visualization techniques, Shadow graphs, Schlieren photography. Interferometer.

UNIT – III

Metallurgical Studies: Optical microscopy, Scanning Electron Microscopy and Transmission Electron Microscopy, X-Ray diffraction, Bragg's Law and its application for studying crystal structure and residual stresses. Electron spectroscopy, **Surface Measurements:** Micro hardness, roughness, accuracy of dimensions and forms. 3 -D co-ordinate measuring machines.

UNIT - IV

Experiment design & data analysis: Statistical methods, Randomized block design, Latin and orthogonal squares, factorial design, Replication and randomization, response surface methodology. **Data Analysis:** Deterministic and random data, uncertainty analysis, tests for significance: Chi -square, student's t-test. Regression modeling, direct and interaction effects. ANOVA, F-test. Time Series analysis, Autocorrelation and autoregressive modeling.

UNIT – V

Taguchi Methods: Experiment design and planning with orthogonal arrays and linear graphs. Additive cause effect model. Optimization of response level. Identification of Design and noise factors. Performance evaluation and Optimization by signal to noise ratios. Concept of loss function and its application.

ME129	SMART MATERIALS AND MEMS					
(Program Elective-II)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- This course provides a detailed overview to smart materials, piezoelectric materials structures and its characteristics.
- To study of Smart structures and modeling helps in Vibration control using smart materials in various applications.
- To familiarize with various microelectronic mechanical systems which find extensive usage in industrial applications.
- to understand the principles and concepts of using MEMS, ER & MR Fluids for various applications

Course outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
CO1	Describe the overview of different kinds of smart materials and their applications	L2
CO2	Explain the principle concepts of Smart materials, structures, Fibre optics, ER & MR Fluids, Biomimetics and MEMS with principles of working.	L3
CO3	Describe the various fabrication processes of smart materials and MEMS	L2
CO4	Analyze the properties of smart structures, MEMS, with the applications and select suitable procedure for fabrication.	L4
CO5	Summarize the methods and uses of Micro fabrications, Biomimetics, types of polymers used in MEMS, Fibre optics, piezoelectric sensing and actuation.	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3		2		1
CO2	3				2
CO3	3		2		
CO4	3		1		2
CO 5	3			1	3

UNIT I

Introduction to smart materials and MEMS: an overview- scaling issues in MEMS -Micro sensors, some examples –Micro actuators, some examples– Micro systems – Examples of smart systems.

UNIT II

Smart composites - piezoelectric materials, shape memory alloys, magnetic materials -Electro and magneto-statics, Electro active polymers and electrostrictive materials - measurement techniques for MEMS.

UNIT III

Fabrication processes - Structure of silicon and other materials Silicon wafer processing; Thin-film deposition, Lithography, Etching, LIGA, Micromachining, Thick-film processing, Smart material processing.

UNIT IV

Mechanics of materials- Stresses and deformation: bars and beams - Micro device suspensions: lumped modeling -Residual stress and stress gradients - Thermal loading; bimorph effect - Vibrations of bars and beams - Gyroscopic effect

UNIT V

Electronics and packing - Semiconductor devices - Signal conditioning for microsystems devices-Vibration control of a beam - Integration of microsystems and microelectronics - Packaging of microsystems.

ME411	TOOL FAILURE ANALYSIS					
(Program Elective-II)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives

The course is taught with the objectives of enabling the student to:

1. Understand the various modes of failure encountered in tools, dies and moulds during service.
2. Study the principles and methods of failure analysis of tooling components.
3. Correlate tool failure with material properties, heat treatment, design and operating conditions.
4. Identify suitable methods for enhancing tool life through material selection, coatings, heat treatment and design modifications.
5. Develop the ability to diagnose tooling problems and recommend remedial measures for improved reliability and productivity.

Course Outcomes

On completion of this course, the student will be able to:

CO	Course Outcome	Bloom's Level
CO1	Identify and classify different modes of failure in cutting tools, dies and moulds.	L2
CO2	Analyze failed tooling components using metallurgical, mechanical and fractographic methods.	L4
CO3	Correlate design, material, heat treatment and process parameters with tool failure.	L4
CO4	Evaluate the influence of wear, thermal effects, fatigue and overload conditions on tool life.	L5
CO5	Recommend suitable life enhancement measures for improving the performance and reliability of tooling systems.	L5

Program Articulation Matrix

Course Outcome	PO1	PO2	PO3	PO4	PO5
CO1	1		3	1	3
CO2	1		3	2	3
CO3	2		3	3	3
CO4	1	1	2	2	2
CO5	2	1	2	2	3

UNIT – I

Introduction to Tool Failures

Classification of tools used in manufacturing operations – cutting tools, press tools, forging dies, extrusion dies, moulds and fixtures. Functional requirements of tooling components. Causes of tool failure in service. Classification of failures: wear, chipping, fracture, plastic deformation, thermal cracking, galling, dimensional instability and corrosion. Influence of loading conditions, temperature, friction and cyclic stresses on tool performance.

UNIT – II

Failure Modes in Cutting Tools and Press Tools

Failure of single-point cutting tools, milling cutters, drills, broaches and inserts. Flank wear, crater wear, chipping, built-up edge, thermal softening and catastrophic fracture. Failure of punches, die blocks, strippers, springs and guide elements in press tools. Influence of clearance, alignment, material hardness, lubrication and impact loading on press tool failure. Failure examples and case studies.

UNIT – III

Failure Analysis of Dies, Moulds and Tooling Materials

Failure of forging dies, extrusion dies, die-casting dies and plastic moulds. Heat checking, thermal fatigue, erosion, soldering, cracking and distortion in hot work tooling. Failure due to improper heat treatment, residual stresses, carbide segregation, decarburization, inclusions and surface defects. Methods of failure investigation – visual examination, dimensional inspection, hardness testing, metallography and fractography. Root cause analysis of tooling failures.

UNIT – IV

Tool Life Assessment and Diagnostic Methods

Concept of tool life and factors affecting it. Wear progression and tool life criteria for cutting and forming tools. Tool condition monitoring methods – wear measurement, crack detection, force monitoring, vibration monitoring and temperature measurement. Statistical analysis of tool life data. Reliability of tooling systems. Maintenance strategies and preventive inspection practices for minimizing unexpected tool failure.

UNIT – V

Tool Life Enhancement and Remedial Measures

Selection of suitable tool materials for different applications. Improvement of tool life through proper heat treatment, surface engineering, coatings and surface modification techniques. Design modifications for stress reduction and improved load distribution. Optimization of lubrication, cooling and process parameters. Reconditioning and repair of tools. Case studies on life enhancement of cutting tools, press tools, moulds and hot working dies.

ME331	MACHINE LEARNING FOR MECHANICAL SYSTEMS					
(Program Elective-II)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60	CIE		40	

Course Outcomes

1. Understand the fundamentals of machine learning and data analytics.
2. Learn supervised, unsupervised, and deep learning techniques for engineering applications.
3. Understand computer vision and intelligent perception methods.
4. Apply machine learning techniques to solve engineering problems.
5. Explore applications of machine learning in Mechanical Engineering and smart manufacturing.

Course Outcomes (COs) After successful completion of the course, the student will be able to:

CO	Course Outcome	BT Level
CO1	Explain the fundamentals of machine learning and data analytics.	L2
CO2	Apply supervised and unsupervised learning algorithms to engineering problems.	L3
CO3	Develop basic deep learning models for data analysis and prediction.	L4
CO4	Apply computer vision techniques for image processing and intelligent perception.	L3
CO5	Apply machine learning techniques to Mechanical Engineering applications such as predictive maintenance, manufacturing, quality control, and intelligent automation.	L3

Program Articulation Matrix

Course Outcome	PO1	PO2	PO3	PO4	PO5
CO1	3	1	2	2	1
CO2	3	1	3	3	2
CO3	3	2	3	3	2
CO4	3	1	3	3	2
CO5	3	2	3	3	3

UNIT – I Introduction to Machine Learning and Data Analytics

Artificial Intelligence, Machine Learning and Deep Learning, data acquisition and preprocessing, data cleaning, feature engineering, data transformation, training and testing datasets, model evaluation metrics, overfitting and underfitting, bias-variance tradeoff, cross-validation, linear regression techniques, logistic regression, regularization methods and model selection techniques.

UNIT – II Supervised and Unsupervised Learning

Gradient descent method, support vector machines, kernel methods, decision trees, random forests, ensemble learning methods, clustering techniques, K-means clustering, hierarchical clustering, principal component analysis (PCA), dimensionality reduction and feature extraction.

UNIT – III Neural Networks and Deep Learning

Artificial neurons, perceptrons, multilayer neural networks, activation functions, backpropagation algorithm, optimization methods, regularization techniques, hyperparameter tuning, convolutional neural networks (CNNs), recurrent neural networks (RNNs), Long Short-Term Memory (LSTM) networks, transfer learning, introduction to autoencoders and deep learning frameworks.

UNIT – IV Computer Vision and Intelligent Perception

Image representation, feature extraction, image classification, object detection, semantic segmentation, computer vision pipelines, robot perception, sensor data interpretation, vision-based decision making, applications in robotics and autonomous systems.

UNIT – V Applications of Machine Learning in Mechanical Engineering

Applications of machine learning in predictive maintenance, fault diagnosis, condition monitoring, remaining useful life prediction, manufacturing process optimization, machining and tool wear prediction, quality control and defect detection, additive manufacturing, production planning and scheduling, structural health monitoring, thermal and energy systems, turbomachinery performance prediction, intelligent robotics and automation, digital twins for mechanical systems, smart manufacturing, and emerging AI-enabled mechanical engineering applications.

Software / Tools Required

Python, Anaconda Distribution, Jupyter Notebook, Google Colab, Visual Studio Code (VS Code), Scikit-learn, TensorFlow, Keras, PyTorch, OpenCV, Pandas, NumPy, Matplotlib, Seaborn, Git & GitHub

ME117	TRIBOLOGY					
(Program Elective-III)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives

- Learn basic understand of surface of metals
- Understand the classification of surfaces
- Learn wear mechanism methods
- Learn methods to reduce friction between mating surfaces
- Learn to measure surface using equipment

Course Outcomes: After successful completion of the course, the student will be able to:

CO's	Description	Blooms Level
CO1	Learn basic concept and types of metallic surface	L1
CO2	Understand the classification of surfaces	L2
CO3	Analyse the types of wear mechanism	L3
CO4	Suggest methods of wear on surfaces	L4
CO5	Design the functional surface for application	L5

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	1	2	3		
CO2	1	2	3	4	
CO3	1	2	3		
CO4	1	2	3	4	
CO 5	1	2	3		

UNIT I

Industrial significance of tribology– Strength and deformation properties of solids – physio-chemical characteristics of solid surfaces –fracture-modes of fracture- ductile-brittle-Analysis of surface roughness – measurement.

UNIT II

Friction – classification – Adhesion theory of friction – Elastic, plastic and visco– elastic effects in friction – rolling friction – friction of materials – alloys – ceramics – polymers – Interface temperature of sliding surfaces – measurement.

UNIT III

Wear– forms of wear-abrasive wear –adhesive wear-erosive wear-cavitation wear-corrosive wear-oxidative wear-fatigue wear-melting wear-diffusive wear-mechanisms-wear of non-metallic materials.

UNIT IV

Lubrication –types of lubrication-hydro dynamic lubrication – Reynolds equation – hydrostatic lubrication – bearing analysis – elasto-hydrodynamic lubrication – solid lubrication – boundary lubrication.

UNIT V

Micro/nano tribology – Measurement techniques – Surface Force Apparatus (SFA) – Scanning Probe Microscopy – Atomic Force Microscopy (AFM)-Nano-mechanical Properties of Solid Surfaces and Thin Films – Computer Simulations of Nanometer-Scale Indentation and Friction.

ME119	QUALITY AND RELIABILITY ENGINEERING					
(Program Elective-III)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To study various aspects of Quality Engineering to solve problems using Statistical Quality Control & Quality loss function.
- To understand various quality management systems like ISO900 , TQM etc. and their basic principle of working & implementation techniques.
- To study Reliability Engineering for assessment & improvement of systems reliability using various hazard models.

CO's	Description	Blooms Level
CO1	Evaluate quality improvement through statistical process control charts and use of acceptance sampling & explain the implications of quality cost	L4
CO2	Solve problems in tolerance design using quality loss function.	L3
CO3	Plan the quality function deployment and understand various quality management systems like ISO900, TQM etc. and their basic principle of working	L4
CO4	Calculate reliability using various hazard models. Reliability calculation of systems in series and parallel.	L3
CO5	Explain the concepts of maintainability, availability, maintenance costing and Reliability testing.	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	2	1
CO2	3	3	2	3	1
CO3	2	2	1	1	2
CO4	2	3	2	2	
CO 5	2	3	2	2	

Unit-I

Quality and value engineering, Quality systems – quality engineering in product design and production process – system design – parameter design – tolerance design quality costs –quality

improvement. Statistical Process Control- $\bar{x}$, R, P, C charts, process capability. Acceptance Sampling by variables and attributes, Design of Sampling Plans, Single, Double, Sequential plans.

Unit-II

Loss Function, Tolerance Design, N Type, L Type, S Type; determination of tolerance for these types, nonlinear tolerances. Online Quality Control – Variable Characteristics, Attribute Characteristics, Parameter Design.

Unit-III

Quality function deployment, House of Quality, QFD Matrix, Total Quality Management Concepts. Quality Information Systems; Quality Circles, Introduction to ISO 9000 Standards.

Unit-IV

Reliability, Evaluation of design by tests - Hazard Models; Linear, Releigh, Weibull. Failure Data Analysis System, Reliability, Reliability of series, Parallel Standey Systems; reliability prediction and system effectiveness, reliability prediction based on weibull distribution, Reliability improvement.

Unit-V

Maintainability, Availability, Economics of Reliability Engineering; Replacement of items, Maintenance Costing and Budgeting, Reliability Testing – Burn in testing by binomial exponential models, Accelerated life testing.

ME120	ADVANCED METROLOGY					
(Program Elective-III)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

1. To Learn the Industrial practice of length measurement
2. To Study the Dimensional of parts manufactured the process
3. To Study the geometrical forms of parts

Course outcomes: At the end of the course the student will be able to:

CO	Course Outcome	BT Level
CO1	Understand the functioning of slip gauges, micrometers, and the concept of interchangeability.	L2
CO2	Understand the working of fixed and indicating gauges.	L2
CO3	Know the working of measuring machines.	L2
CO4	Identify various types of form errors and their rectification.	L2
CO5	Understand the measurement of screw threads and gears.	L2

Program Articulation Matrix

Course Outcome	Program Outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	1	3
CO2	2	2	2	1	3
CO3	3	2	1	2	3
CO4	2	3	2	1	3
CO 5	3	3	3	2	3

UNIT-I

End & line standards for length, Airy & Bessel points, desirable features of end standards, slip gauge manufacture, calibration of end standards by interferometry. NPL gauge interferometer, calibration of line standards by micrometer microscope – superposition, coincidence and symmetric straddling, photoelectric microscope and Moiré fringe techniques, measurement of large displacements using lasers, calibration of Tomlinson gauges by interferometry. Photoelectric Autocollimator, calibration of polygons & circular scales. Types of interchangeability, dimensional chains.

UNIT-II

Fixed & Indicating Gauges: Taylor's principles of gauge design, limitations of ring & plug gauges, position and receiver gauges, and types of indicating gauges. **Comparators:** Multirange Sigma comparator, Back pressure and free flow type pneumatic comparators, Differential back pressure gauge, usage of different types of jets, contact & non-contact tooling. Amplification selection. Air to electric transducer, Differential transducer, Variation transducer, Preprocess, In-

process & Post process gauging, computation & match gauging. Usage of LVDT & Capacitive type gauge heads, Automatic inspection.

UNIT-III

Measuring Machines: Floating carriage diameter measuring M/C. Universal measuring M/C. Max. internal diameter measuring machine. Optical dividing head. Coordinate measuring machine, Optical projector-light beam systems, Work tables, measurement techniques, fixturing & accessories. Sources of error in measurement. Design principles of measuring machines Abbe's rule, Kelvin coupling, flexible steel strip, advantages & limitations of hydrostatic & aerostatic bearings.

UNIT-IV

Form Errors: Evaluation of straightness & flatness, usage of beam comparator, evaluation of roundness – intrinsic & extrinsic datum's. Talyrond. PGC, RGC, MZC & LSC, methods, roundness evaluation for even & odd number of lobes. Surface Finish: stylus instrument (TALYSURF). M & E Systems, numerical assessment, vertical & horizontal descriptors, profile as a random process, usage of interferograms. Plastic replica technique.

UNIT-V

Screw Threads: Measurement of thread elements for internal & external threads, progressive periodic, drunkenness and irregular pitch errors. NPL pitch measuring machine, virtual effective diameter, thread gauging. Gears: measurement of tooth thickness, involute profile, pitch, concentricity and alignment, rolling gear test.

ME122	PRODUCT DESIGN RE-ENGINEERING					
(Program Elective-III)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- Redesign of Manufacturing Processes in producing parts utilizing various Raw materials, appropriate tolerances combination for most convenient manufacturing without compromising the Quality.
- Understand use of metallic, non-metallic, welded, assembled components design involving various forming and machining processes with their capabilities and limitations.
- Understand achieving overall economics due to implementation of positive impact of Assembled part modifications and latest techniques. Make case studies to identify opportunities for economic design and redesign for manufacture.

CO's	Description	Blooms Level
CO1	Evaluate and suggest/use of appropriate tolerances with suitable economic raw material for the parts design.	L4
CO2	Plan the use of metallic components design involving various metal forming and basic machining processes with their capabilities and limitations	L4
CO3	Plan the utilization of metallic components design for planned shaped, centre less ground, EDM, roll finished,, Electrochemical and advanced machine parts.	L4
CO4	Calculate the economics of using non-metallic component design made with various plastics and ceramics. Assembled and welded parts.	L4
CO5	Explain the overall economics using, Low Cost Automation, GT& FMS, Assembled Part Modifications. Make case studies to identify opportunities for economic design and redesign for manufacture	L3

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	2	3	2	3	
CO2	3	3	1	3	
CO3	3	2	1	1	
CO4	2	3	1	3	
CO 5	3	3	2	3	2

Unit – I: Introduction

General design principles for manufacturability, strength and mechanical factors, mechanisms selection, evaluation method, geometrical tolerances, tolerance control and utilization. Economic

Use of Raw Materials: Ferrous steel, hot rolled steel, cold finished steel, stainless steel, nonferrous materials aluminium, copper, brass, non-metallic materials, plastics, rubber and composites.

Unit – II: Metallic Components Design

Metal extrusion, metal stamping, fine blanking, four slide parts, spring and wire forms, spun metal parts, cold headed parts, extruded parts, tube and section bends, rolled formed parts, power metal parts, forging electro forming parts, specialized forming methods, turned parts, machined round holes, drilled parts, milled parts.

Unit-III: Metallic Components Design

Planned shaped and slotted parts, screw threaded contoured and internal ground parts, center less ground, electrical discharged, rolled furnished parts, electro chemical and advanced machine parts. Sand cast, die cast, investment cast and other cast products.

Unit-IV: Non Metallic Components Design

Thermosetting plastic, injection moulded and rotational moulded parts, blow moulded, welded plastic articles, ceramics. Assembled Parts Design: Welded parts, arc, resistance, brazed and soldered parts, gear box assembly, bearing assembly.

Unit-V: Assembled Parts Design

Retention, bolted connection, screwed connections, flanged connections, centred connections, press fitted connections, surface finishing, plated parts, heat treated parts, NC machining, group technology, low cost automation, computer aided manufacture, product design requirements. **Case Studies:** Identification of economical design and redesign for manufacture.

ME311	FINITE ELEMENT TECHNIQUES					
(Program Elective-III)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To familiarize students with the displacement-based finite element method for displacement and stress analysis and to introduce related analytical and computer tools.
- To provides a bridge between hand calculations and numerical solutions for more complex geometries and loading states.
- To study approximate nature of the finite element method and convergence of results are examined.
- It provides some experience with a commercial FEM code and some practical modeling exercises.

Course outcomes: After completion of the course student will be able to

CO's	Description	Bloom s Level
CO1	Explain the mathematical foundations and formulation of the finite element method.	L1
CO2	Develop finite element models for one-dimensional and two-dimensional engineering problems.	L3
CO3	Analyze structural, thermal and dynamic systems using finite element techniques.	L4
CO4	Apply finite element methods to vibration and stress analysis of engineering components	L5
CO5	Evaluate Tool design related problems using commercial finite element analysis tools.	L5

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3		2	2	2
CO2	3		2	2	3
CO3	3		2	2	3
CO4	3		2	2	3
CO 5	3		2	2	3

UNIT – I Fundamentals of Finite Element Method

Introduction to finite element analysis, historical development, mathematical modeling of engineering field problems, governing equations, discrete and continuous systems, boundary and initial value problems, weighted residual methods, Galerkin method, variational formulation, finite element formulation, strain-displacement relationships, stress-strain relationships, interpolation functions, element discretization,

assembly procedures and treatment of boundary conditions.

UNIT – II One-Dimensional Finite Elements

Finite element formulation of bar elements, truss elements, beam elements and frame elements, local and global coordinate systems, element stiffness matrices, force-displacement relationships, higher-order one-dimensional elements, analysis of trusses, beams and frames,

UNIT – III Two-Dimensional Finite Elements

Constant strain triangle (CST) elements, four-noded quadrilateral element, isoparametric formulation, numerical integration concepts, plane stress problems, plane strain problems, axisymmetric problems, body forces and thermal loading, stress recovery, convergence requirements, higher-order elements and applications in structural analysis.

UNIT – IV Thermal and Dynamic Finite Element Analysis

Steady-state heat transfer analysis, one-dimensional heat conduction, fin analysis, composite wall analysis, two-dimensional heat conduction problems, transient heat transfer analysis, finite element formulation of dynamic systems, eigenvalue problems, natural frequencies and mode shapes, modal analysis and vibration analysis of engineering structures.

UNIT – V: Commercial FEA Software and Engineering Applications

Three-dimensional finite element analysis, basic three-dimensional stress analysis, introduction to inviscid fluid flow analysis- stream functions, velocity potential, CAD–FEA integration, mesh generation and mesh quality, introduction to nonlinear finite element analysis, commercial FEA software (ANSYS, Abaqus, HyperMesh and SolidWorks Simulation), post-processing and interpretation of results, and engineering applications in machine design, manufacturing, automotive, aerospace and robotics.

Software / Tools Required. ANSYS Mechanical, Abaqus, HyperMesh, SolidWorks Simulation, MATLAB, COMSOL Multiphysics, Autodesk Fusion 360, CATIA, MSC Nastran/Patran, Altair HyperView

ME 451	TOOL DESIGN LAB					
Pre-requisites	-		L	T	P	C
			-	-	2	1
Evaluation	SEE	-	CIE	50 Marks		

Course Objectives:

- To perform design of sheet metal dies, calculation of cutting forces and measurement of cutting temperature.
- To understand experimental procedure on extrusion, spinning, EDM, UTM, Fatigue and CNC.
- To understand the design principles of jigs, fixtures and press tools.

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
CO1	Study the chip morphology and evaluate chip thickness and shear angle	L2
CO2	Perform formability studies on sheet metals.	L2
CO3	Perform experiments on CNC lathe and Mill.	L4
CO4	Evaluate the mechanical properties of welded joints	L5
CO5	Design a jig or a Fixture for a given component.	L5

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	3	3	1
CO2	3	2	3	3	1
CO3	3	2	2	3	1
CO4	3	3	2	3	1
CO5	3	3	1	3	1

List of Experiments:

1. Study of the morphology of chips produced from different materials sand machining

processes.

2. Study of cutting ratio/chip thickness ratio in simulated orthogonal cutting with different materials and tool geometry.
3. Roughness of machined surface. Influence of tool geometry and feed rate.
4. Study of the water hammer equipment and hydrostatic extrusion setup.
5. Extrusion of cylindrical billets through dies of different included angles and exit diameters and their effect on extrusion pressure.
6. Practice and study of blanking and punching process and their characteristic features on mechanical press with existing dies.
7. Experiments on EDM to measure MRR and Surface roughness of different metals.
8. Programming and experiments on CNC milling for different profiles.
9. Programming and experiments on CNC lathe for cylindrical jobs.
10. Experiments on MIG/MAG or TIG and MIG welding to find out the mechanical properties of metals.
11. Testing of mechanical properties of metals by using UTM.
12. Fatigue Testing of metals on Rotary Fatigue Testing Machine.
13. Wear testing of tools on PIN on DISC and Abrasion Tester.
14. Design a jig for a given component and draw assembly and detailed drawing of the designed jig.
15. Design a Fixture for a given component and draw assembly and detailed drawing of the designed fixture.
16. Design and draw assembly and detailed drawing of a progressive die for a given component

ME 461	SEMINAR					
Pre-requisites	-		L	T	P	C
			-	-	2	1
Evaluation	SEE	-	CIE	50 Marks		

Course Objectives:

The course is taught with the objectives of enabling the student to:

- 1 Understand the purpose of seminar
- 2 Learn the resources available at the college and outside for pursuing project
- 3 Importance of literature review
- 4 Learn to document results and arrive at required conclusions

Course Outcomes:

On completion of this course, the student will be able to :

CO	Course Outcome	BT Level
CO1	Identify engineering problems by reviewing available literature.	L2
CO2	Study the different techniques adopted to solve the problem.	L2
CO3	Understand the usage of related techniques and software.	L2
CO4	Investigate the procedure adopted and interpret the results and conclusions obtained.	L3
CO5	Document the findings as a technical report with proper references.	L4

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	1		
CO2	3	3	1	1	
CO3	2	3	3	2	
CO4	2	2	2	2	

The seminar must be clearly structured and Power point presentation should include the following:

1. Introduction
2. Literature survey
3. Consolidation of available information
4. Objectives and Methodology
5. Results and Discussions
6. Conclusions
7. References

Seminar topics may be chosen by the students with advice from the faculty members and the student shall read further relevant articles in the domain.

The seminar must be clearly structured and the power point presentation shall include following aspects:

1. Introduction to the field
2. Literature survey
3. Consolidation of available information
4. Objectives and Methodology
5. Results and Discussions & Summary
6. Conclusions
7. References

Each student is required to:

1. Deliver the seminar for a maximum duration of 30 minutes, where the presentation should be for 20 minutes in PowerPoint, followed by Question and Answers session for 10 minutes.
2. Submit the detailed report of the seminar in spiral bound in a précised format as suggested by the Department.

Guidelines for awarding marks		
S. No.	Description	Max. Marks
1	Contents and relevance	10
2	Presentation skills	10
3	Preparation of PPT slides	05
4	Questions and answers	05
5	Report in a prescribed format	20

Note:

1. The seminar presentation should be a gist of few research papers from Peer-reviewed or UGC recognized journals.
2. The seminar report should be in the following order: Background of work, literature review, techniques used, prospective deliverables, discussion on results, conclusions, critical appraisal and references
3. At least two faculty members will be associated with the seminar presentation to evaluate and award marks.
4. Attendance of all the students for weekly seminar presentations is compulsory.

With effect from the academic year 2026- 2027

SEMESTER II

ME404	DESIGN OF DIES					
(Core-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To learn the types, materials, moulds& its terminology and applications of plastics.
- To design the moulds, design approach and process variables.
- To design of dies for metal casting and design of forming tools.
- To understand design concepts of finisher impression dies.

Course Outcomes: At the end of the course, student will be able to

CO's	Description	Blooms level
CO1	Understand the plastics, types and their processing methods. Design the various elements with feed and ejection system as per the requirement of the product.	L1
CO2	Design moulds with necessary mechanism to facilitate the moulding of the product with special features.	L4
CO3	Design the pressure casting dies and various elements to suit the process with relevant design considerations for various process variables.	L4
CO4	Understand the importance of forging, types of forging and their methods and apply tolerances as per IS:3469.	L1
CO5	Design finisher impression and other preliminary forging stages in detail and differentiate between reduce role forging and conventional die forging	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	2	1
CO2	3	3	2	2	1
CO3	3	3	2	2	1

CO4	3	3	2	3	1
CO 5	3	3	2	3	1

UNIT– I

Definition of Plastics–Development–Types of Plastics viz. thermos-plastic and thermos-setting plastics–Types plastic materials for both and their application–Methods of processes-a bird's eye view–Mould terminology–Construction–Mold cavities, cores–Bolsters types–Standard mold base–Ejection system and techniques–Feed system design–sprue, runner and gate–Efficiency of runner–Functions of gate–Types of gate, application– Mold cooling.

UNIT– II

Design of moulds: for external undercuts (Splits)–Side core & cavities–Methods of actuating–Moulds for internal undercuts–Moulds for threaded components–Multi daylight moulds– Under feed moulds–Details–Runner less moulds–Design approach and process variables for transfer moulds and compression moulds.

UNIT– III

Design of dies for metal casting-Variou casting processes–Die casting dies–Terminology applicable to process viz. hot chamber, cold chamber (horizontal and vertical) process–Terminology applicable to dies – Alignment of metal flow in hot chamber, horizontal cold chamber and vertical cold chamber machines–Modification for casting deep core or with limitations of stroke– Design for various elements– Effect of off-centre cavity Layout–Necessity of balancing–Types of dies viz. single cavity, multi cavity, combination and unit die–Runner, gate calculations–Various parameters influencing the Runner gate design-Ejection mechanism– Ejection elements and various locations–Die locking mechanism–Types of alloys–Trimming– Types of trim dies.

UNIT– IV

Bulk metal forming tools–Forging dies–Definition–Influence of temperature and external pressure–Glossary words applicable informing dies–Types of forging dies, open die forming closeddieforging–Methodsofopendieforging–Allowanceandtolerancesapplicable to closed die forging– Factors to be considered– Forging equipment–Layout of forge shop

UNIT– V

Design of finisher impression–Preparation of forging drawing–Design of fuller – Types of fuller–Design of blocker and consideration–Design of edge rolling impression–Design of bender–Planning layout of multi impression dies–procedure–Flash and, gutter–Importance– Calculations–Capacity calculations for hammers & presses–Trimming dies-Push through and compound–Upsetting–Rules for simple upsetting–Press forging or reduce roll forging concepts– Forward and backward extrusion.

ME405	MATERIAL SELECTION IN DESIGN					
(Core-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- Understand strengthening mechanisms and testing methods like hardness, fracture, creep and fatigue in materials
- Comprehend the applications, properties and composition of various tool steels
- Understand the heat treatment of various tools steels, and specifications of die castings

Course outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
C01	Recognize strengthening mechanisms of metals and Categorize the behaviour of fracture, creep and fatigue in materials	L2
C02	Determining mechanical properties and understand the concepts of fracture analysis	L3
C03	Classify the tool and die steels and interpret the applications, properties and composition of various tool steels, modern cutting tool materials and plastics	L4
C04	Distinguish the requirements and specifications of ferrous and nonferrous die castings according to Bureau of Indian Standards(IS)	L3
C05	Assess the heat treatment of various types of tool steels.	L3

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3		1	2	2
CO2	3		1	3	2
CO3	3		2		
CO4	3		2		
CO 5	3		1	2	1

UNIT-I:

Crystal Structure: Types and Crystal Structures. Imperfections. Strain hardening, Plasticity range, Recovery, Recrystallisation and Grain growth. Mechanism of strengthening in metals. Grain

size and its relation to mechanical properties.

Failure of Materials: ductile fracture, brittle fracture, fatigue, crack initiation and propagation, creep. Fatigue and Creep testing of materials.

UNIT-II

Testing of Materials: Review and brief discussion on stress strain diagram of steel and the parameters for ductility, toughness, tensile strength, percentage of elongation etc., True stress and strain, Elastic Recovery After Plastic Deformation, Hardness, types of hardness measurements, comparison among hardness methods and scales. Fracture toughness testing. Failure analysis, Fractography.

UNIT-III

Tool and die steels: Classification, selection and properties of tool steels. Effect of alloying elements in tool steels. Water-hardening tool steels, Shock-resisting tool steels, Cold work tool steels, Hot work tool steels, High speed tool steels, Mould steels and Special purpose tool steels. Types of modern Cutting Tool materials like Carbide, Coated carbides, Ceramics, CBN, Diamond, Sialons, Impregnated tools.

Plastics Properties of plastics-Thermo plastics-Thermo setting plastics. Methods of processing of plastics and plastic processing machines.

UNIT-IV

Ferrous and Non-ferrous Die castings: Specifications, Properties and applications of Carbon and alloy Steels, Specification of Grey iron casting IS: 210 SG Cast Iron IS: 1865, Malleable iron castings IS: 14329. Selection and specification of die casting non-ferrous zinc (IS 713, IS742) and Aluminium(LM series).

Powder Metallurgy: Production of powders by various methods. Compacting, Sintering applications.

UNIT-V

Phase Diagrams: Effect of alloying elements on Iron- Iron carbide equilibrium diagram. Isothermal Transformation diagrams. Microstructural and property changes in Iron-carbon alloys.

Heat treatment: Introduction and types, Hardenability. Heat treatment of Water-hardening tool steels, Shock-resisting tool steels, Cold work tool steels, Hot work tool steels, High speed tool steels. Case hardening methods. Heat treatment of non-ferrous materials.

ME406	HYDRAULIC AND PNEUMATIC SYSTEMS					
(Core-V1)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To understand the types fluid power, advantages of fluid power, application of fluid power system.
- To know the basics of hydraulics and properties of hydraulic fluids.
- To design of simple hydraulic, pneumatic circuits and servo systems.

CO's	Description	Blooms Level
C01	Understand fluid power systems	L2
C02	Gain knowledge on pumps and compressors	L4
C03	Exhibit the knowledge on selection of components of fluid power systems	L3
C04	Design pneumatic and hydraulic circuits	L3
C05	Operate LCA and FMS	L4

Program Articulation Matrix

Course Outcome	Program Outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	3	2	1	-
CO2	3	3	1	1	-
CO3	3	2	1	1	-
CO4	3	3	2	1	-
CO 5	3	2	1	1	-

Unit-I:

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Compressibility and incompressibility of fluids–Stagnation states, Mach waves and Mach cone–Effect of Mach number on compressibility–Isentropic flow through variable ducts–Nozzle and Diffusers. Ideal Gas equations–Applications of Pascal's Law– Laminar and Turbulent flow–Reynolds number–Darcy's equation–Losses in fluid power system.

Unit II:

Basics of Hydraulics –Properties of hydraulic fluids –Sources of Hydraulic Power-Pump classifications– Construction and working of Pumps– Pump performance– comparison of pumps. An overview of Basic hydraulic system. Basics of Pneumatics –Properties of compressed air-Sources of Pneumatic Power-Types of compressor-Construction and working of compressor-Performance of compressor-An overview of Basic pneumatic system-Comparison of pump and compressor–Need for compressed air conditioning –pneumatic dryer–Filter, regulator and lubricator –fluid power accumulators–purpose and types. Distribution of Fluid power and safety measures.

Unit-III:

Fluid power actuators-selection of actuators –pneumatic and hydraulic actuators –types and ISO symbols– linear and rotary. Construction and working of double acting cylinder– special actuators–rodless, tandem, impact, duplex and telescopic cylinders.–types of actuating mechanism. sensors–limit switches, reed switches and pressure switches Cushioning mechanism in pneumatic and hydraulic cylinders. Control valves–types of valves. Construction and working of control valves -3/2, 4/2, 5/3 and 4/3 Direction control valve, flow control valve, classification and working of pressure control valves, sequencing and relief valve.

Unit-IV:

Design of simple hydraulic and pneumatic circuits-Speed and force calculation of linear actuator. Design considerations of pneumatic and hydraulic circuits. meter in, meter out and counter balancing circuits. Design of multi cylinder pneumatic and hydraulic sequencing circuit. Fluidics– Introduction to fluidic devices, simple circuits. Design of simple Electro pneumatic and Electro hydraulic circuits. Design of Multi cylinder electro pneumatic and electro hydraulic circuits– Ladder diagram. conflict signals–identification of conflict signal. Cascading method–step counter method, Karnaugh-Veitch method and combinational circuit design.

Unit V:

Servo systems– Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Pneumatic PID circuits. PLC applications in fluid power control, ladder diagrams, Timers and counters. Low Cost Automation using pneumatics and Flexible manufacturing system. Fluid power circuits; failure and troubleshooting FIELD WORK Case study on applications using1. PLC2.FMS3. Servo system.

ME412	MACHINE TOOLD ESIGN					
(Program Elective-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To familiarize students with the machine tool types and kinematics of design
- To understand the various forces acting on machine tool elements
- To study the effects of motion on various elements by vibration and its methods
- To machine specification and testing with validation procedure through industry standards

CO's	Description	Blooms Level
C01	Understand type of kinematics and its dynamics of operation of machine tools	L2
C02	Derive the new mechanism application	L4
C03	Design of machine tool structures for the given application	L3
C04	Enhance the Machine tool kinematics for innovative application	L3
C05	Test and validate machine tools structure suitable to application	L4

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	1	2	3	1	3
CO2	2	3	3	2	3
CO3	2	2	3	3	3
CO4	1	2	2	2	2
CO 5	2	3	2	2	3

UNIT-I

Classification of Machine Tools: General purpose, Special purpose, Automatic, Semi-Automatic machine tools, Transfer lines. **Kinematics of Machine Tools:** Shaping of geometrical and real surfaces, Developing and designing of kinematics schemes of machine tools, Kinematic structures of lathe, drilling, milling, relieving lathe, grinding, gear shaping and gear hobbing machining. Kinematic design and speed and feed boxes. Productivity loss. Stepped and stepless regulation.

UNIT-II

Strength and Rigidity of Machine Tool Structures: Basic principles of design for strength.

Different types of structures. General design procedures. Effect of materials and shape factors on the rigidity of structure, overall compliance of machine tool. Design of beds, bases columns, tables, cross rails for various machines. Effect of wear of guide ways on the performance. Various types of guide ways, their relative advantages. Materials for machine tool components including plastic guide ways (PTFE).

UNIT-III

Analysis of Spindles, Bearing and Power Screws: Design of spindles subjected to combined bending and torsion. Layout of bearings. Pre-loading. Anti-friction slide ways. Rolling contact, hydrodynamic, hydrostatic, aerostatics and magnetic bearings, their relative performance. Power Screws, Recirculating ball screws. Hydrodynamic design of journal bearings.

UNIT-IV

Machine Tool Vibrations: Effect of vibration on machine tool; Forced vibrations. Machine tool chatter. Self excited vibration and dynamic stability single and two degree freedom analysis. Comply coefficient. Elimination of vibration. Vibration analysis of machine tool structures.

UNIT-V

Hydraulic Systems: General principles, hydraulic fluid power lines. Properties of hydraulic fluid. Various positive displacement pumps, their characteristics and operation. Design of hydraulic tanks and other systems. Various valves used in hydraulic systems. Design and application of various hydraulic circuits. One position and multi-position scheme. Single and multi pump screws. Electrical analogy. Pneumatic circuits. Hydro copying system. Evaluation of machine tools with regard to accuracies, sound and vibration. Machine tool testing.

ME413	DESIGN OF PLASTIC MOULDS					
(Program Elective-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To understand basic concepts of product design
- To learn the design concepts for various mould elements.
- To acquire knowledge about various moulds for different processing techniques
- To learn the basic design aspects related to Injection Mould, Compression Mould, Transfer Mould, Blow Mould.
- To learn the basic design aspects related to extrusion dies

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
C01	Explain the types, elements, and design of injection moulds, including feed systems and cavity layouts	L2
C02	Design mould cooling systems and apply temperature control methods for efficient mould operation.	L3
C03	Design suitable mould ejection systems and calculate the ejection force for moulded components.	L3
C04	Design compression and transfer moulds based on product requirements and process parameters	L3
C05	Explain and design blow moulds, rotational moulds, and extrusion dies for polymer processing applications.	L2

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	1			1
CO2	3	3	1		1
CO3	3	2	1	2	2
CO4	3	2	2	2	1
CO5	3	2	1	2	

UNIT-I

Injection Mould Design :

Introduction – Types of Injection Moulds: Cold Runner – Hot Runner – Hand – Semi Automatic – Automatic Two plate - Three Plate – Moulds for Internal & External Undercuts Stack mould, multi shot moulds Elements of Injection Mould - Factors considered for Mould Design- -Shot Capacity-Clamping Force- Injection Time – hold on time Cooling Time - Number of Cavities –Layout of Cavities. Design of Injection mould systems–Parting surface and its types - Core–Cavity – Bolster construction methods for core & cavity-Guide pillar- Guide bush - Sprue bush - Locating Ring Standard Mould System – Mould alignment – Mould Assembly – Mould Clamping. Feed System: Sprue – types of sprue – Runner – types of runner - cross section and size of runner –runner layout – balancing of runners – semi hot runner and hot runner Gates - Gate location and balancing - types of gates – Mould Venting.

UNIT-II

Mould Cooling System Design

Mould cooling types : Parallel cooling, take off, : Introduction -Heat Transfer Fluids- Chillers- Temperature Controllers - Factors Affecting the Cooling Cycle -Cooling Efficiency - Mould Cooling Variables -Cooling Calculations -Cooling of Integer type mould plates - Cooling of Insert Bolster assembly -cooling of other mould parts- connections of cooling channels and seals. Mould Temperature Control System water and oil medium.

UNIT-III

Mould Ejection System Design

Types of Ejection Systems: parallel ejection, sleeve ejection pin ejection, blade ejection, stripper plate ejection, air ejection, Requirements – Elements of Ejection system - Ejector grid, Ejector plate assembly, Ejection techniques – Ejection from fixed half - Sprue Pullers- Ejection Force Calculation - Ejection Assembly Actuation. Interfacing of robots for part removal.

UNIT-IV

Design of Compression & Transfer Moulds

Compression Mould Design: Introduction -Types - Open flash, Semi-positive, Positive moulds, Bulk factor - Design of loading chambers and Pressure pad - Calculations of Flash thickness, Projected area, Compression Pressure, Clamping Force, No. of impressions- Design of heating system - Transfer Mould Design: Introduction -Types – Design of Pot and Plunger - Calculations of Projected area, Transfer Pressure, clamping force - Design of Pressure pad and Feed system.

UNIT-V

Design of Blow, Rotational Moulds & Dies

Blow Mould Design: Introduction-Types of blow moulds-Blow ratio - Parison design–Pinch off design - parting line-mould cooling-mould alignment. Rotational Mould Design: Introduction – Construction- Extrusion Die Design: Types of extrusion dies Principles of extrusion - construction of die - die geometry - die swell–die land design - sizing die.

ME105	COMPUTER AIDED MANUFACTURING					
(Program Elective-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- Provide concepts and knowledge in computer aided manufacturing
- Apply CAD/CAM concepts to product design and manufacturing
- Learn working principles of NC machines CNC control and part programming
- Analyse concepts of Group Technology, FMS and CIM

Course outcomes: After completion of the course student will be able to:

CO's	Description	Blooms Level
CO1	Describe basic concepts of CAM and demonstrate engineering design concepts	L2
CO2	Apply Product specification methods in design	L4
CO3	Develop CNC programs for manufacturing of different geometries	L3
CO4	Describe process planning	L3
CO5	Explore the application of PPC, JIT, MRP-I, MRP-II, and Expert system to CAM	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	1	2	1	
CO2	3	2	3	1	
CO3	3	2	3	1	
CO4	1	2	2	1	
CO 5	1	3	1	2	

UNIT-I

Computer Aided Manufacturing: CAM Concepts, Objectives & scope, Nature & Type of manufacturing system, Evolution, Benefits of CAM, Role of management in CAM, Concepts of Computer Integrated Manufacturing, Impact of CIM on personnel, Role of manufacturing engineers.

UNIT-II

NC/CNC Machine Tools: NC and CNC Technology: Types, Classification, Specification and components, Construction Details, Controllers, Sensors and Actuators, CNC hardware: Re circulating ball screw, anti friction slides, step/servo motors. Axis designation, NC/CNC tooling. Fundamentals of Part programming, Types of format, Part Programming for drilling, lathe and milling machine operations, subroutines, do loops.

UNIT–III

DNC Systems and Adaptive Control: Introduction, type of DNC systems, advantages and disadvantages of DNC, adaptive control with optimization, Adaptive control with constraints, Adaptive control of machining processes like turning, grinding. Post Processors for CNC: Introduction to Post Processors: The necessity of a Post Processor, the general structure of a Post Processor, the functions of a Post Processor, DAPP — based-Post Processor

UNIT – IV

Micro Controllers: Introduction, Hardware components, selection of Micro Controllers, Applications, and Programming of Micro Controllers. Programming Logic Controllers (PLC's): Introduction, Hardware components of PLC, System, basic structure, principle of operations, Programming mnemonics timers, Internal relays and counters, Applications of PLC's in CNC Machines.

UNIT – V

Integrated Production Management System: Introduction, PPC fundamentals, Problems with PPC, MRP-I, MRP-II. Just in Time philosophy: JIT & GT applied to FMS, concepts of Expert System in Manufacturing and Management Information System.

ME106	ADDITIVE MANUFACTURING TECHNOLOGIES AND APPLICATIONS					
(Program Elective-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To know the fundamentals of Additive Manufacturing (AM) and compare it with conventional CNC technology
- To understand the working principle, advantages, limitations and applications of various AM Technologies and also various types of data formats and errors.
- To know the role of AM in Topology optimization and understand the applications of AM in various fields like Biomedical, Aerospace, Automobile and other domains.

Course outcomes: After completion of the course student will be able to:

CO's	Description	Blooms Level
C01	Interpret the features of Additive Manufacturing and compare it with conventional CNC Technology	L2
C02	Illustrate the working principle, advantages, limitations and applications of various Additive Manufacturing Technologies and Rapid Tooling systems	L2
C03	Interpret various types data formats and STL file errors used in AM and identify the role of Topology optimization in AM	L3
C04	Analyze the features of different types of software's used in 3D Printing	L4
C05	Apply the knowledge of various AM technologies for developing new and innovative applications	L3

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	
CO2	3	2	1	2	
CO3	3	2	1		1
CO4	2	2	3	2	1
CO 5	3	2	2	2	1

Unit – I

Introduction: Prototyping fundamentals: Need for time compression in product development, Need for Additive Manufacturing, Historical development, Fundamentals of Additive Manufacturing, AM Process Chain, Advantages and Limitations of AM, Commonly used Terms, Classification of AM process, Fundamental Automated Processes: Distinction between AM and

CNC, other related technologies. Role of AM in Industry 4.0.

Unit – II

Working principle, Specifications, Materials used, Process, Applications, Advantages and Disadvantages, Case studies of the following AM Technologies

Vat Photopolymerization AM Systems: Photopolymers, photo polymerization Stereo lithography Apparatus (SLA), Direct Light Processing (DLP) and Continuous Direct Light Processing (CDLP).

Material Jetting AM Systems: Material Jetting, Nano particle jetting and Drop-On-Demand (DOD) material jetting **Binder Jetting AM Systems:** Three-dimensional Printing (3DP).

Material Extrusion AM Systems: Fused Deposition Modeling (FDM)

Unit – III

Working principle, Specifications, Materials used, Process, Applications, Advantages and Disadvantages, Case studies of the following AM Technologies

Powder Bed Fusion AM Systems: Selective laser sintering (SLS), Selective Laser Melting (SLM) and Direct Metal Laser Sintering (DMLS), Electron Beam Melting (EBM).

Direct Energy Deposition (DED) AM Systems: Laser Engineered Net Shaping (LENS) and Electron Beam Additive Manufacturing (EBAM).

Sheet Lamination AM Systems: Laminated Object Manufacturing (LOM) and Ultrasonic Additive Manufacturing (UAM).

Rapid Tooling: Introduction to Rapid Tooling (RT), Conventional Tooling Vs RT, Need for RT, Classification of Rapid Tooling, Direct and Indirect Tooling Methods, Soft and Hard Tooling methods.

Unit – IV

Reengineering in AM: Reengineering Engineering (RE) Methodologies and Techniques, Selection of RE systems, RE software, RE hardware, RE in product development

AM Data Formats : STL Format, STL File Problems, Consequence of Building Valid and Invalid Tessellated Models, STL file Repairs: Generic Solution, Slicing Algorithms: Rock Algorithm, Crawford's algorithm, Other Translators, Newly Proposed Formats. Mesh Refining by Sub division Techniques, Topology optimization and Additive Manufacturing.

AM Software's: Need for AM software, Features of various AM software's like Magics, Mimics, Solid View, View Expert, 3 D View, Velocity 2, Rhino, STL View 3 Data Expert and 3 D doctor, SurgiGuide, 3-matic, Simplant, MeshLab.

Unit –V

AM Applications: Application – Material Relationship, Application in Design, Engineering Analysis and Planning, Aerospace, Automotive, Jewelry, Coin, GIS, Arts, Architecture. Medical and Bioengineering Applications, Forensic Science and Anthropology, Visualization of Biomolecules.

Cost Estimation in AM: Cost Model, Build Time Model, Laser Scanning Vat Photopolymerization Example, Life-Cycle Costing.

ME125	SUSTAINABLE MANUFACTURING					
(Program Elective-IV)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To understand the fundamentals of Sustainable Manufacturing and various tools and techniques of sustainability.
- To know the principles of sustainable design
- To understand the role of customer and user needs assessment for sustainability

Course outcomes: After completion of the course student will be able to:

CO's	Description	Blooms Level
C01	Summarize the basic concepts in sustainability	L2
C02	Apply sustainable engineering design tools for life cycle assessment (LCA) and examine the features of various LCA Software	L3
C03	Interpret the Principles of Sustainable Breakthrough Design	L3
C04	Summarize the various design concepts for sustainability	L2
C05	Identify Customer and User Needs Assessment for sustainable manufacturing	L2

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	1
CO2	3	2	3	3	1
CO3	3	1	2	1	
CO4	3	2	1	1	1
CO 5	3	3	2	1	1

UNIT-I:

Basic Concepts in Sustainability

Understanding the language of sustainable engineering design, construction and operation. Natural resources terminology. Carrying capacity. Sustainable development, corporate responsibility, biophysical constraints, environmental management.

UNIT-II:

Tools and Techniques of Sustainability

Sustainable Engineering Design Tools – Life cycle analysis, carbon foot printing. Life cycle assessment (LCA), Types of LCA's: baseline, comparative, streamlined. LCA inventory analysis: process or input-output. Hybrid inventory analysis, Sustainable product design, whole system design. Light weighting and material reduction. Designing for a lifetime. Design for durability, design repair and upgrade. disassembly and recycling. Energy use in design, reducing energy losses in design.

UNIT- III:

Foundational Concepts & Principles for Sustainable Breakthrough Design

Infrastructure for managing flows of materials, energy and activities; sustainable value creation approaches for all stakeholders, environmental design characteristics; design changes & continual improvement; inclusive sustainable design principles, crowd sourcing, multiple-objective designs; infrastructures that support system thinking; knowledge management for sustainable design, learning systems and experimentation; smart data systems, understanding variation.

UNIT-IV:

Sustainable Design

Industrial ecology, multiple life cycle design, principles of design, green engineering, cradle to cradle design, The Natural Step, biomimicry, design for reuse, dematerialization, modularization, design for flexibility, design for disassembly, design for inverse manufacturing, design for the environment, etc.

UNIT-V:

Customer and User Needs Assessment

Identification & breakdown structures that describe customers & stakeholders, green marketing, socially conscious consumerism, sources of customer information, collecting information, analyzing customer behaviour, translating the voice of the customer, use analysis, structuring customer needs, service gap analysis, prioritizing customer needs, strategic design, Kano technique.

ME414	ADVANCED MANUFACTURING TECHNIQUES					
(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives: After completion of the course student will be able to

- To know the fundamentals of advanced manufacturing techniques.
- To understand the working principle, advantages, limitations and applications of various advanced manufacturing techniques.
- To learn principle and applications of advanced machining techniques.

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
C01	Illustrate the importance and have knowledge of Unconventional machining	L2
C02	To understand the working principles of various Non-traditional methods in machining	L2
C03	Analyze the various unconventional machining and improve its performance	L4
C04	Select the corresponding unconventional method for machining a product.	L1
C05	Analyze the high speed machining and improve its performance	L3

Program Articulation Matrix

Course Outcome	Program Outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	1	1
CO2	3	3	2	1	1
CO3	3	2	2	2	1
CO4	3	2	1	1	1
CO 5	3	3	2	2	1

UNIT-I

Introduction: Need for non-traditional machining processes. Processes selection, classification, and comparative study of different processes. Mechanical Process: **Ultrasonic Machining-** Definition-Mechanism of metal elements of the process- Tool feed mechanism. Theories of mechanics of causing effect of parameter applications. **Abrasive Jet Machining:** Principles - parameters of the process, applications, advantages and disadvantages. **Water Jet Machining (WJM):** Schematic diagram, equipment used, advantages, disadvantages and applications.

Abrasive Water Jet Machining (AWJM): Schematic sketch, equipment and abrasives used, advantages, disadvantages and applications.

UNIT-II

Thermal Metal Removal Process: Electric discharge machining Principle and operation – mechanism of metal removal, basic EDM circuitry-spark erosion. Analysis of relaxation type of circuit, material removal rate in relaxation circuits- critical resistance- parameters in RC Circuit- Dielectric fluids- flushing- Electrodes, surface finish. Applications. **Wire EDM** principle and operation. Wire materials, wire tension and its parameters. Applications.

UNIT-III

Electro Chemical and Chemical Processes : Electro chemical machining (ECM) Classification ECM process-principle of ECM Chemistry of the ECM parameters of the processes-determination of the metal removal rate - dynamics of ECM process-Hydrodynamics of ECM process-polarization. Tool Design-advantages and disadvantages - applications. Electro Chemical Grinding- Electro Chemical honing, electrochemical deburring.

UNIT-IV

Electron Beam Machining (EBM): Introduction-Equipment for production of Electron beam Theory of electron beam machining, Thermal & Non thermal type's characteristics – applications. **Laser Beam Machining (LBM):** Introduction-principle of generation of lasers equipment and machining procedure-types of Lasers-process characteristics-advantages and limitations-applications. **Ion Beam Machining (IBM):** Introduction-mechanism of metal removal and associated equipment-process characteristics and applications. **Plasma Arc Machining (PAM):** Introduction-Plasma-generation of Plasma and equipment, mechanism of metals removal, PAN parameters-process characteristics - type of torches, applications.

UNIT-V

High speed Machining: Introduction: Advanced Machining Processes, A new Era.

The Determinants of High-Speed Machining: Weight, Materials, Machine Tools, Simple Processes and Systems, Fast Machining, Response Time, and Throughput, Smart Machines, Tools, and Processes. Characteristics of High-Speed Machining: Machining Parameters.

Dry and Near-dry Machining: Environmental Impact, Dry Machining, Near-dry Machining, Reducing Coolant Use. **Practical Applications:** Precision Hard Machining, Machining Compacted Graphite Iron, Precision Roughing, Advanced Milling Operations, Machining with Multi-cut Tools.

(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

1. Understand the principles, evolution, and industrial applications of reverse engineering in modern product development.
2. Acquire knowledge of geometric reconstruction techniques, 3D scanning technologies, and rapid prototyping methods.
3. Analyze engineering materials and manufacturing processes through material characterization and process verification techniques.
4. Apply statistical and performance evaluation methods to validate reverse-engineered components and systems.
5. Understand the legal, ethical, and intellectual property aspects associated with reverse engineering and technology reinvention.

Course Outcomes: After completion of the course student will be able to:

CO's	Description	Blooms Level
CO1	Explain the concepts, historical evolution, methodology, and industrial applications of reverse engineering in engineering design and product development.	L2
CO2	Apply geometric modeling, 3D scanning, data processing, and rapid prototyping techniques to reconstruct engineering components	L1
CO3	Analyze material characteristics, manufacturing processes, and failure mechanisms using material identification and process verification techniques	L3
CO4	Evaluate the reliability, performance, compatibility, and quality of reverse-engineered products using statistical and engineering analysis methods	L3
CO5	Assess the legal, ethical, and intellectual property implications of reverse engineering, including patents, copyrights, trade secrets, and industrial case studies	L4

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	1	—	—
CO2	3	3	2	—	—
CO3	3	2	3	1	—
CO4	2	3	3	1	1
CO 5	1	—	1	3	2

Unit I

Introduction: Historical Background, Industrial Evolution, Reinvention of Engineering, Marvels from Nature, Reverse

Engineering in Modern Industries, Reverse, Engineering vs. Machine Design, Motivation and Challenge, Analysis and Verification, Accreditation, Part Criticality, Applications of Reverse Engineering.

Unit II

Geometrical Form: Surface and Solid Model Reconstruction, Scanning Instruments and Technology, Principles of Imaging, Cross-Sectional Scanning, Digital Data, Computational Graphics and Modeling, Data Refinement and Exchangeability, Dimensional Measurement, Case Studies, Part Tolerance, Prototyping, Additive Prototyping Technologies, Subtractive Prototyping Processes, Rapid Injection. Molding, Steps of Geometric Modeling.

Unit III

Material Characteristics and Analysis: Alloy Structure Equivalency, Phase Formation and Identification, Mechanical Strength, Hardness, Part Durability and Life Limitation, Part Failure Analysis, Fatigue, Creep and Stress Rupture, Environmentally, Induced Failure. Material Identification and Process Verification: Material Specification, Composition Determination, Microstructure Analysis, Manufacturing Process Verification.

Unit IV

Data Process and Analysis: Statistical Analysis, Data Analysis, Reliability and the Theory of Interference, Weibull Analysis, Data Conformity and Acceptance, Data Report Part Performance and System Compatibility Performance Criteria, Methodology of Performance Evaluation, System Compatibility.

Unit V

Acceptance and Legality: Legality of Reverse Engineering, Legal Definition of Reverse Engineering, Legal Precedents on Reverse Engineering, Patent, Copyrights, Copyright Codes, Legal Precedents on Copyrights, Trade Secret, Case Study of Reverse Engineering a Trade Secret, Third-Party Materials

ME416	ADVANCED TOOL MATERIALS AND COATINGS					
(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives

The course is taught with the objectives of enabling the student to:

1. Understand the classification, properties and applications of advanced tool materials used in metal cutting, forming and moulding operations.
2. Study the relationship between composition, microstructure, heat treatment and performance of tool materials.
3. Learn the principles, methods and applications of surface coatings and surface engineering for tools.
4. Analyze the role of coatings in improving wear resistance, thermal stability and tool life.
5. Develop the ability to select suitable tool materials and coatings for specific manufacturing applications.

Course Outcomes

CO	Course Outcome	BT Level
CO1	Classify advanced tool materials used for cutting, forming and moulding applications and explain their properties.	L2
CO2	Correlate the composition, microstructure and heat treatment of tool materials with performance requirements.	L4
CO3	Explain the principles and methods of applying hard coatings and surface engineered layers on tools.	L2
CO4	Evaluate the influence of coatings on wear, friction, thermal resistance and tool life.	L5
CO5	Select suitable tool materials and coating systems for different tooling applications.	L5

CO	PO1	PO2	PO3	PO4	PO5
CO1	2	1	3	3	2
CO2	3	2	3	3	2
CO3	2	1	3	3	2
CO4	3	2	3	3	3
CO5	3	2	3	3	3

UNIT – I

Tool Materials – Classification and Requirements

Functional requirements of tool materials – hardness, toughness, wear resistance, hot hardness, thermal conductivity and dimensional stability. Classification of tool materials for cutting, forming and moulding applications. Carbon tool steels, alloy tool steels, high-speed steels, hot work and cold work die steels. Cemented carbides, cermets, ceramics, cubic boron nitride and diamond tools. Selection criteria for tool materials based on service conditions.

UNIT – II

Advanced Tool Materials and Heat Treatment

Metallurgy of high-speed steels and die steels. Powder metallurgy tool steels. Carbide grades and binder systems. Advanced ceramics and ultra-hard tool materials. Heat treatment of tool steels – hardening, tempering, secondary hardening, cryogenic treatment and stress relieving. Influence of microstructure, grain size, carbide distribution and retained austenite on tool performance. Failure related to improper heat treatment.

UNIT – III

Surface Engineering and Coating Techniques

Need for surface engineering in tooling applications. Functions of tool coatings – wear resistance, oxidation resistance, reduction of friction and thermal protection. Coating materials used for tools: TiN, TiCN, TiAlN, AlCrN, CrN, DLC and multilayer coatings. Coating deposition methods – CVD, PVD, PACVD, thermal spraying and diffusion treatments. Surface preparation and adhesion of coatings.

UNIT – IV

Performance of Coated Tools

Tribological behavior of coated tools. Influence of coating thickness, hardness, residual stresses and substrate-coating compatibility on tool performance. Coatings for cutting tools, punches, dies, moulds and forming tools. Thermal barrier and anti-sticking coatings. Wear mechanisms in coated tools – abrasion, adhesion, oxidation, delamination and chipping. Tool life improvement through coating selection and process optimization.

UNIT – V

Selection, Applications and Case Studies

Selection of tool materials and coatings for machining, sheet metal working, forging, extrusion, die-casting and plastic moulding applications. Coating failures and diagnostic methods. Reconditioning and recoating of tools. Economic considerations in material and coating selection. Case studies on performance enhancement of cutting tools, press tools, moulds and hot working dies using advanced materials and coatings.

ME104	PRODUCT DESIGN AND PROCESS PLANNING					
(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- To learn the essential factors with innovative ideas to develop successive right product.
- To acquaint with product reliability, copyrights, value Engineering in product design and cost estimation of product.
- To understand the various machining processes, improving tolerances methods, selection of materials and their importance.
- To understand the modern approaches, ergonomics considerations in product design, integration of design, manufacturing and production control.

Course Outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
CO1	Identify and analyze the product design and development processes in manufacturing industry	L3
CO2	Perform function analysis to improve the value of the productn, estimate the cost of the product and be familiar with the Intellectual Property rights	L2
CO3	Suggest an appropriate manufacturing process for a given product using product design rules of various manufacturing process	L4
CO4	Understand the importance of ergonomics in the design of new products	L2
CO5	Comprehend the role of computer in product design, Manufacturing and Management	L2

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	1		1	1	1
CO2	2		2	2	3
CO3	1	1	2	3	2
CO4	1	1	3	3	2
CO5	2		3	3	3

UNIT - I

Introduction to product design, Design by Evolution, Design by Innovation, Essential factors of product design, Production-Consumption Cycle, Morphology of design, evaluation of new product ideas. Analysis of the product, The Three S's Product reliability, Mortality Curve, Reliability systems, Manufacturing reliability and quality control.

UNIT - II

Patents: Definitions, classes of patents, applying for patents. Trademarks and copyrights. Cost and quality sensitivity of products, Elements of cost of a product, costing methods, cost reduction and cost control activities. Economic analysis, Break even analysis Charts. Value engineering in product design, Case study, Function analysis system technique (FAST) Procedures of value analysis – cost reduction, material and process selection.

UNIT - III

Various manufacturing processes, degree of accuracy and finish obtainable, process capability studies. Basic product design rules for Casting, Forging, Machining, Sheet metal and Welding. Physical properties of engineering materials and their importance on products. Selection of plastics, rubber and ceramics for product design.

UNIT - IV

Industrial ergonomics: Man-machine considerations, ease of maintenance. Ergonomic considerations in product design-Anthropometry, Design of controls, man-machine information exchange. Process sheet detail and their importance, Value of appearance, colours and Laws of appearance. advanced techniques for higher productivity. Just -in -time and Kanban System.

UNIT - V

Role of computer in product design, Manufacturing and Management. Modern approaches to product design; quality function development, Rapid prototyping. Computer Integrated Manufacturing, communication network, production flow analysis, Group Technology, Computer Aided process Planning. Flexible manufacturing system

ME132	DESIGN FOR MANUFACTURING AND ASSEMBLY					
(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- The objective of course is identify the manufacturing constraints that influence the design of parts and part systems.
- Students will be introduced to the Design for Manufacturability (DFM) methodology, and will be motivated to understand infeasible or impractical designs.

Course Outcomes: After completion of the course student will be able to

CO	Course Outcome	BT Level
CO1	Understand the quality aspects of design for manufacture and assembly.	L2
CO2	Apply Boothroyd method of DFM for product design and assembly.	L3
CO3	Apply the concept of DFM for casting, welding, forming and assembly.	L3
CO4	Identify the design factors and processes as per customer specifications.	L2
CO5	Apply the DFM method for a given product.	L3

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	3	2	2	2	
CO2	3	3	2	2	
CO3	3	3	2	2	
CO4	3	3	2	2	
CO 5	3	3	2	2	

UNIT - I:

Introduction: Design philosophy steps in Design process - General Design rules for manufacturability - basic principles of design Ling for economical production - creativity in design.

Materials: Selection of Materials for design Developments in Material technology - criteria for material selection - Material selection interrelationship with process selection process selection charts.

UNIT - II:

Machining Process: Overview of various machining processes - general design rules for machining - Dimensional tolerance and surface roughness - Design for machining - Ease - Redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

Metal Casting: Appraisal of various casting processes, selection of casting process, - general design considerations for casting - casting tolerances - use of solidification simulation in casting design - product design rules for sand casting.

UNIT - III:

Metal Joining: Appraisal of various welding processes, Factors in design of weldments - general design guidelines - pre and post treatment of welds - effects of thermal stresses in weld joints - design of brazed joints.

Forging - Design factors for Forging - Closed dies forging design - parting lines of die5 drop forging die design - general design recommendations. Extrusion & Sheet Metal Work: Design guidelines for extruded sections - design principles for Punching, Blanking, Bending, Deep Drawing - Keeler Goodman Forming Line Diagram - Component Design for Blanking.

UNIT- IV

Assemble Advantages: Development of the assemble process, choice of assemble method assemble advantages social effects of automation.

Automatic Assembly Transfer Systems: Continuous transfer, intermittent transfer, indexing mechanisms, and operator - paced free – transfer machine.

UNIT - V:

Design of Manual Assembly: Design for assembly fits in the design process, general design guidelines for manual assembly, development of the systematic DFA methodology, assembly efficiency, classification system for manual handling, classification system for manual insertion and fastening, effect of part symmetry on handling time, effect of part thickness and size on handling time, effect of weight on handling time, parts requiring two hands for manipulation, effects of combinations of factors, effect of symmetry effect of chamfer design on insertion operations, estimation of insertion time.

ME133	COMPOSITE MANUFACTURING					
(Program Elective-V)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:

- Understand the fundamentals, classification, and mechanics of advanced composite materials.
- Develop knowledge of polymer, metal, and ceramic matrix composites and their processing techniques.
- Learn the design principles, manufacturing methods, and performance evaluation of composite materials.
- Gain knowledge of advanced characterization, testing, and non-destructive evaluation techniques for composites.
- Familiarize with the selection and application of advanced composites in aerospace, automotive, biomedical, and other engineering fields

Course outcomes: After completion of the course student will be able to

CO's	Description	Blooms Level
C01	Explain the fundamental concepts, classification, and multiscale mechanics of advanced composite materials.	2
C02	Analyse the processing techniques and structural design principles of polymer matrix composites.	3
C03	Evaluate the material systems, processing methods, and performance characteristics of metal matrix composites.	4
C04	Understand the processing techniques, properties, and high-temperature applications of ceramic matrix composites.	2
C05	Apply advanced characterization, testing, and non-destructive evaluation techniques for assessing composite material performance	2

Program Articulation Matrix

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1	2	2	1	2	1
CO2	2	2	2	2	1
CO3	2	2	1	2	1
CO4	2	2	1	2	1
CO 5	2	2	2	2	1

Unit 1

Introduction to Composites: Fundamentals of Composites-Evolution and need for advanced composite materials; multiscale modelling approaches including micro, meso and macro mechanics of composites. Classification of composite materials and reinforcement architectures; interface and interphase science in composites. Nano-reinforced and hybrid composite systems; fibre production technologies for glass, carbon and ceramic fibres. Structure–property–processing relationships

Unit II

Polymer Matrix Composites (PMC): Advanced polymer matrices including thermosets, thermoplastics and elastomers, and their viscoelastic behaviour. Manufacturing processes of polymer matrix composites such as hand lay-up, spray-up, resin transfer moulding (RTM/VARTM), filament winding, pultrusion, automated fibre placement (AFP), and additive manufacturing.

Unit III

Metal Matrix Composites (MMC): Metal Matrix Composites (MMCs): strengthening mechanisms and load transfer behaviour in metal matrix systems; selection of suitable MMC material systems and alloys. Processing techniques including powder metallurgy, advanced sintering, friction stir processing, stir casting, squeeze casting, laser cladding, and additive manufacturing. Interface characterization between reinforcement and matrix; rule of mixtures and advanced predictive models for property estimation.

Unit IV

Ceramic Matrix Composites (CMC): Engineering ceramics and their mechanical and fracture behaviour; classification and applications of ceramic matrix composites (CMCs). Processing techniques including Chemical Vapour Infiltration (CVI), Polymer Infiltration and Pyrolysis (PIP), Hot Isostatic Pressing (HIP), Cold Isostatic Pressing (CIP), Spark Plasma Sintering, microwave sintering, and additive manufacturing.

Unit V:

Advanced Characterization: Advanced characterization techniques for composite materials including cure and

thermal analysis using Differential Scanning Calorimetry (DSC), Thermogravimetric Analysis (TGA), and Dynamic Mechanical Analysis (DMA). Mechanical testing methods such as tensile, compression, fatigue, creep, and compression-after-impact testing. Non-destructive evaluation techniques including ultrasonic testing, acoustic emission, radiography, and thermography.

OE 941 BM	MEDICAL ASSISTIVE DEVICES					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	To extend knowledge of the amputee, of lost and remaining functions affecting locomotion, and to collect information on the best possible medical treatment.
2	To improve fitting techniques and practices, including training, so that existing devices might be used with greater comfort and function.
3	To develop improved lower-extremity devices

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Apply fundamental knowledge of engineering in rehabilitation
CO-2	Apply analytical skills to assess and evaluate the need of the end-user
CO-3	Develop self-learning initiatives and integrate learned knowledge for problem solving
CO-4	Understand the basics of robotics and apply their principles in developing Prosthetics
CO-5	Apply the knowledge of computers in solving rehabilitation problems

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Introduction to Rehabilitation Engineering, Measurement and analysis of human movement, Disability associated with aging in the workplace and their solutions, clinical practice of rehabilitation engineering.

Unit – II
Assistive Technology, Seating Biomechanics and systems. Wheeled Mobility: Categories of

Wheelchairs. Wheelchair Structure and Component Design. Ergonomics of Wheel chair propulsion. Power Wheelchair Electrical Systems. Control. Personal Transportation. Auxiliary devices and systems.

Unit – III

Sensory augmentation and substitution: Visual system: Visual augmentation. Tactual vision substitution, Auditory vision substitution; Auditory system: Auditory augmentation. Cochlear implantation, Visual auditory substitution, Tactual auditory substitution, Tactual system: Tactual augmentation. Tactual substitution. Measurement tools and processes: fundamental principles, structure, function; performance and behavior. Subjective and objective measurement methods.

Unit – IV

Rehabilitation Robotics, Major Limb Prosthetic Devices, Orthotic Devices, Types of orthotics and prosthetics, Intelligent prosthetic Knee, Prosthetic Hand, Controlled orthotics and prosthetics FES system, Restoration of Hand function, Restoration of standing and walking, Myo-electric Hand.

Unit – V

Augmentative and Alternative communication technology, Computer applications in Rehabilitation Engineering, telecommunications, and Web Accessibility.

Suggested Reading:

OE 942 BM	MEDICAL IMAGING TECHNIQUES					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	To familiarize the students with various medical imaging modalities.
2	To make learners understand the principles, detectors and operating procedures of X-ray, CT, MRI, ultrasound, PET and SPECT.
3	To make the students learn the advantages, disadvantages and hazards of various medical imaging equipment.

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Interpret the working principle and operating procedure and applications of X-ray equipment.
CO-2	Understand the image reconstruction techniques and applications of CT.
CO-3	Summarize the image acquisition and reconstruction techniques in MRI.
CO-4	Comprehend the working principle, modes and medical applications of ultrasound imaging.
CO-5	Examine the operation and applications of PET, SPECT and radio nuclide instrumentation.

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
X ray Imaging: Electromagnetic spectrum, Production of X-rays, X-ray tubes- Stationary and Rotating Anode types, Block diagram of an X-Ray Machine, Collimators and Grids, Timing and Exposure controls. X-Ray Image visualization-Films, Fluorescent screens, Image Intensifiers. Dental X-Ray machines, Portable and mobile X-Ray units, Mammographic X-Ray equipment, Digital Radiography and flat panel detectors. Radiation safety, ALARA principle, Dose units and dose limits, Radiation dosimeters and detectors.

Unit – II

Computed Tomography: Basic principles, CT number scale, CT Generations. Major sub systems- Scanning system, processing unit, viewing unit, storage unit. Need and Principle of sectional imaging, 2D image reconstruction techniques - Iteration and Fourier methods. Applications of CT - Angio, Osteo, Dental, Perfusion (Body & Neuro), Virtual Endoscopy, Coronary Angiography.

Unit – III

Magnetic Resonance Imaging: Principles of NMR imaging systems, Image reconstruction techniques-Relaxation processes, imaging/ pulse sequences. Sub systems of an NMR imaging system, NMR detection system, types of coils, biological effects and advantages of NMR imaging.

Functional MRI - The BOLD effect, intra and extra vascular field offsets, source of T2* effects, Creating BOLD contrast sequence optimization sources and dependences of physiological noise in fMRI.

Unit – IV

Ultrasound Imaging: - Principles of image formation -Imaging principles and instrumentation of A-mode, B-Mode, Gating Mode, Transmission mode and M-mode. Basics of multi-element linear array scanners, Digital scan conversion.

Doppler Ultrasound and Colour Doppler imaging, Image artifacts, Biological effects, Ultrasound applications in diagnosis, therapy and surgery.

Unit – V

Nuclear Medicine–Radioisotopes in medical diagnosis, Basic instrumentation- Radiation detectors, Pulse height analyzer, Rectilinear scanner, Gamma camera.

Emission Computed Tomography (ECT), Principle and instrumentation of Single Photon Emission Computed Tomography(SPECT) and Positron Emission Tomography (PET). Comparison of SPECT, PET and combined PET/ X-ray CT.

OE 941 CE	GREEN BUILDING TECHNOLOGY					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Exposure to the green building technologies and their significance.
2	Understand the judicious use of energy and its management.
3	Educate about the Sun-earth relationship and its effect on climate.
4	Enhance awareness of end-use energy requirements in the society.
5	Develop suitable technologies for energy management

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Understand the fundamentals of energy use and energy processes in building.
CO-2	Identify the energy requirement and its management.
CO-3	Know the Sun-earth relationship vis-a-vis its effect on climate.
CO-4	Be acquainted with the end-use energy requirements.
CO-5	Be familiar with the audit procedures of energy

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	3	3	3	2	1	2
CO-2	3	2	3	2	1	1
CO-3	3	2	3	2	1	2
CO-4	3	2	3	2	1	2
CO-5	3	2	3	2	1	1

Unit – I
Overview of the significance of energy use and energy processes in building - Indoor activities and environmental control - Internal and external factors on energy use and the attributes of the factors - Characteristics of energy use and its management - Macro aspect of energy use in dwellings and its implications.

Unit – II

Indoor environmental requirement and management - Thermal comfort - Ventilation and air quality – Air-conditioning requirement - Visual perception - Illumination requirement - Auditory requirement.

Unit – III

Climate, solar radiation and their influences - Sun-earth relationship and the energy balance on the earth's surface - Climate, wind, solar radiation, and temperature - Sun shading and solar radiation on surfaces - Energy impact on the shape and orientation of buildings.

Unit – IV

End-use, energy utilization and requirements - Lighting and day lighting - End-use energy requirements - Status of energy use in buildings Estimation of energy use in a building. Heat gain and thermal performance of building envelope - Steady and non-steady heat transfer through the glazed window and the wall - Standards for thermal performance of building envelope - Evaluation of the overall thermal transfer.

Unit – V

Nuclear Medicine–Radioisotopes in medical diagnosis, Basic instrumentation- Radiation Energy management options - Energy audit and energy targeting - Technological options for energy management.

OE 942 CE	COST MANAGEMENT OF ENGINEERING PROJECTS					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Introduce the concepts of cost management
2	Fundamentals of cost overruns
3	Introduce the concepts of Quantitative techniques for cost management Linear Programming, PERT/CPM.

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Understanding of strategic cost management process, control of cost and decision making based on the cost of the project.
CO-2	Ability to appreciate detailed engineering activities of the project and execution of projects
CO-3	Preparation of project report and network diagram
CO-4	Able to plan Cost Behavior , Profit Planning , Enterprise Resource Planning, Total Quality Management.
CO-5	Applications of various quantitative techniques for cost management

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Introduction and Overview of the Strategic Cost Management Process-Cost concepts in decision-making; relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System- Inventory valuation- Creation of a Database for operational control; Provision of data for Decision-Making.

Unit – II
Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning- Project execution as conglomeration of

technical and non- technical activities- Detailed Engineering activities.

Unit – III

Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process.

Unit – IV

Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems- Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector- Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints- Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets- Performance budgets- Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

Unit – V

Quantitative techniques for cost management, Linear Programming, PERT/CPM,- Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Suggested Reading:

1	Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2	Charles T. Horngren and George Foster, Advanced Management Accounting
3	Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4	Ashish K. Bhattacharya, Principles & Practices of Cost Accounting A. H. Wheeler publisher
5	N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

OE 941 CS	BUSINESS ANALYTICS					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Understanding the basic concepts of business analytics and applications
2	Study various business analytics methods including predictive, prescriptive and prescriptive analytics
3	Prepare the students to model business data using various data mining, decision making methods

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	To understand the basic concepts of business analytics
CO-2	Identify the application of business analytics and use tools to analyze business data
CO-3	Become familiar with various metrics, measures used in business analytics
CO-4	Illustrate various descriptive, predictive and prescriptive methods and techniques
CO-5	Model the business data using various business analytical methods and techniques

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Introduction to Business Analytics: Introduction to Business Analytics, need and science of data driven (DD) decision making, Descriptive, predictive, prescriptive analytics and techniques, Big data analytics, Web and Social media analytics, Machine Learning algorithms, framework for decision making, challenges in DD decision making and future.

Unit – II
Descriptive Analytics: Introduction, data types and scales, types of measurement scales, population and samples, measures of central tendency, percentile, decile and quadrille, measures

of variation, measures of shape-skewness, data visualization.

Unit – III

Forecasting Techniques: Introduction, time-series data and components, forecasting accuracy, moving average method, single exponential smoothing, Holt’s method, Holt-Winter model, Croston’s forecasting method, regression model for forecasting, Auto regression models, auto-regressive moving process, ARIMA, Theil’s coefficient

Unit – IV

Decision Trees: CHAID, Classification and Regression tree, splitting criteria, Ensemble and method and random forest. **Clustering:** Distance and similarity measures used in clustering, Clustering algorithms, K-Means and Hierarchical algorithms, **Prescriptive Analytics-** Linear Programming(LP) and LP model building.

Unit – V

Six Sigma: Introduction, introduction, origin, 3-Sigma Vs Six-Sigma process, cost of poor quality, sigma score, industry applications, six sigma measures, DPMO, yield, sigma score, DMAIC methodology, Six Sigma toolbox.

Suggested Reading:

1	U Dinesh Kumar, “Data Analytics”, Wiley Publications, 1st Edition, 2017
2	Marc J. Schniederjans, Dara G. Schniederjans, Christopher M. Starkey, “Business analytics Principles, Concepts, and Applications with SAS”, Associate Publishers, 2015
3	S. Christian Albright, Wayne L. Winston, “Business Analytics - Data Analysis and Decision Making”, 5th Edition, Cengage, 2015

OE 941 EC	ELEMENTS OF EMBEDDED SYSTEMS					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Understanding various Embedded Design strategies
2	Designing Micro controller based Embedded Systems
3	Designing FPGA Based Embedded Systems

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Understand Embedded Design Strategies and architecture of Arduino Board
CO-2	Program using various onboard components of Arduino
CO-3	Design real time interfacing with Arduino
CO-4	Understand Design Flow of FPGA, programming FPGA using Verilog HDL
CO-5	Implement combinational and sequential circuits using verilog HDL

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Embedded Systems Design Strategies: Micro Controller, DSP, FPGA, Introduction to Arduino (Micro controller Board), Components of Arduino, Architecture and Pin Configuration of ATmega328, Ports of ATmega328.

Unit – II
Interfacing: Interfacing Switches, LEDs, Analog to Digital Converter, Digital to Analog Converter, Interfacing and Programming I2C, SPI

Unit – III
Real Time Programming: Interfacing Key Pad, 7-segment display, LCD, Interfacing Sensors,

Interfacing Stepper Motor, USB programming
--

Unit – IV

FPGA Based Embedded Design: FPGA Design flow, Introduction to Verilog HDL, Basic building blocks, Data types of Verilog HDL, Behavioral Modelling, Data Flow Modelling, Structural Modelling, Hierarchical Structural Modelling, Case Studies on Verilog HDL descriptions of Basic Circuits
--

Unit – V

Modelling of Circuits: Verilog HDL Implementation of Combinational MSI Circuits, Verilog HDL Implementation of Sequential MSI Circuits, Finite State Machine Design, Tasks and Functions, Introduction to Test Benches

Suggested Reading:

1	Ming-Bo Lin, Digital System Designs and Practices Using Verilog HDL and FPGAs, Wiley India, 2008
2	Samir Palnitkar, Verilog HDL: A Guide to Digital Design and Synthesis, Pearson Education, 2005
3	Simon Monk, Programming Arduino: Getting Started with sketches, Mc.Hill, 2016

OE 941 EE	WASTE TO ENERGY					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	To know the various forms of waste
2	To understand the processes of Biomass Pyrolysis.
3	To learn the technique of Biomass Combustion.

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Understand the concept of conservation of waste
CO-2	Identify the different forms of wastage.
CO-3	Chose the best way for conservation to produce energy from waste.
CO-4	Explore the ways and means of combustion of biomass.
CO-5	Develop a healthy environment for the mankind.

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	3	-	3	2	3	1
CO-2	3	-	3	2	3	1
CO-3	3	-	3	2	3	1
CO-4	3	-	3	2	3	1
CO-5	3	-	3	2	3	1

Unit – I
Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

Unit – II
Biomass Pyrolysis: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

Unit – III

Biomass Gasification: Gasifiers – Fixed bed system – Downdraft and updraft gasifiers Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

Unit – IV

Biomass Combustion: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

Unit – V

Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass Bio diesel production - Urban waste to energy conversion -Biomass energy programme in India.

Suggested Reading:

1	Non Conventional Energy, Desai, Ashok V., Wiley Eastern Ltd., 1990.
2	Biogas Technology - A Practical Hand Book - Khandelwal, K. C. and Mahdi, S. S., Vol. I & II, Tata McGraw Hill Publishing Co. Ltd., 1983.
3	Food, Feed and Fuel from Biomass, Challal, D. S., IBH Publishing Co. Pvt. Ltd., 1991.
4	Biomass Conversion and Technology, C. Y. WereKo-Brobby and E. B. Hagan, John Wiley & Sons, 1996.

OE 942 EE	POWER PLANT CONTROLAND INSTRUMENTATION					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	The operation of different types of power plants.
2	The basic working principle of instruments for measurement of electrical and non-electrical quantities like Temperature Pressure flow level measurements.
3	The instrumentation and protection systems applied in thermal power plant.
4	The control techniques employed for the operation of modern power generation plant

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Explain the different methods of power generation. Along with Piping and Instrumentation diagram of boiler.
CO-2	Select various measurements involved in power generation for measuring electrical and non-electrical parameters.
CO-3	Identify the different types of analyzers used for scrutinizing boiler steam and water.
CO-4	Model different types of controls and control loops in boilers.
CO-5	Illustrate the methods of monitoring and control of different parameters like speed, vibration of turbines

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	3	1	-	-	-	2
CO-2	3	1	-	-	-	2
CO-3	3	1	-	-	-	2
CO-4	3	1	-	-	-	2
CO-5	3	1	-	-	-	2

Unit – I
Brief survey of methods of power generation, hydro, thermal, nuclear, solar and wind power, importance of instrumentation in power generation, thermal power plants, block diagram, details of boiler processes, Piping and Instrumentation diagram of boiler, cogeneration.

Unit – II

Electrical measurements, current, voltage, power, frequency, power factor etc, non-electrical parameters, flow of feed water, fuel, air and steam with correction factor for temperature, steam pressure and steam temperature, drum level measurement, radiation detector, smoke density measurement, dust monitor.

Unit – III

Flue gas oxygen analyzer: Analysis of impurities in feed water and steam, dissolved oxygen analyzer. Chromatography, pH meter, fuel analyzer, pollution monitoring instruments.

Unit – IV

Combustion control, air / fuel ratio control, furnace draft control, drum level control, main steam and reheat steam temperature control, super heater control, air temperature, distributed control system in power plants, interlocks in boiler operation.

Unit – V

Speed, vibration, shell temperature monitoring and control, steam pressure control, lubricant oil temperature control, cooling system.

Suggested Reading:

1	Sam G. Dukelow, The Control of Boilers, Instrument Society of America, 2nd Edition, 2010.
2	P.K. Nag, „Power Plant Engineering“, Tata McGraw-Hill, 1st Edition, 2001.
3	S.M. Elonka and A.L. Kohal, “Standard Boiler Operations”, Tata McGraw-Hill, 1st Edition, 1994.
4	R K Jain, “Mechanical and Industrial Measurements”, Khanna Publishers, 1st Edition, 1995.
5	E Al Wakil, “Power Plant Engineering”, Tata McGraw-Hill, 1st Edition, 1984.

OE 941 ME	OPERATION RESEARCH					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives:	
The course is taught with the objectives of enabling the student to:	
1	To understand the dynamic programming to solve problems of discrete and continuous variables
2	To apply the concept of non-linear programming and carry out sensitivity analysis
3	To understand deterministic and probabilistic inventory control models.

Course Outcomes:	
After the completion of this course, the students shall be able to:	
CO-1	To understand the basics of OR, including mathematical modeling, feasible solutions and optimization.
CO-2	Able to carry out sensitivity analysis.
CO-3	Apply PERT/CPM in project management.
CO-4	Select appropriate inventory control model.
CO-5	Able to apply dynamic programming and understand the concept of non-linear programming.

Course Outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	1	1	3	2	1	2
CO-2	3	1	2	3	2	-
CO-3	1	3	3	1	2	2
CO-4	3	2	1	3	1	1
CO-5	2	1	3	2	2	2

Unit – I
Development, Different Phases, Characteristics, Operations Research models and applications. Linear Programming Problem: Introduction, Basic Assumptions, Formulation, graphical method, simplex method: Big M and Two Phase method.

Unit – II
DUALITY: Duality theory, primal-dual relationships, Economic interpretation, Dual simplex method, Post optimal or sensitivity analysis.

Unit – III
Project Management: Introduction to PERT and CPM, critical Path calculation, float calculation and its importance. Cost reduction by Crashing of activity. Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice.

Unit – IV
Sequencing Models: Introduction, General assumptions, processing n jobs through 2 machines, processing 'n' jobs through m machines. Game Theory: Introduction, Characteristics of Game Theory, Dominance theory, Mixed strategies (2 x 2, m x 2), Algebraic and graphical methods. Nonlinear programming problem: - Kuhn-Tucker conditions.

Unit – V
Queuing models - Queuing systems and structures – Notation parameter – Single server and multi server models – Poisson arrivals – Exponential service times – with finite population – Infinite population. Dynamic Programming: Characteristics, principle of optimality, deterministic problems.

OE 942 ME	COMPOSITE MATERIALS					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	<i>Study the concepts of composite construction.</i>
2	<i>Learn analysis and designs of composite beams, floors, columns and trusses as per the recommendations of IS codes of practice.</i>
3	<i>Apply the concepts for design of multi-storey composite buildings.</i>
4	<i>Scope of analysis is restricted to skeletal structures subjected to prescribed dynamic loads.</i>

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	<i>Understand the fundamentals of composite construction, and analysis and designs of composite beams.</i>
CO-2	<i>Analyse and design the composite floors</i>
CO-3	<i>Select suitable materials for composite columns,</i>
CO-4	<i>Analyse composite trusses and understand connection details.</i>
CO-5	<i>Analyse and design the multi-storey composite buildings</i>

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Introduction of composite constructions: Benefits of composite construction - Introduction to IS - BS and Euro codal provisions. Composite beams: Elastic behaviour of composite beams - No and full interaction cases - Shear connectors - Ultimate load behaviour - Serviceability limits - Effective breadth of flange - Interaction between shear and moment - Basic design consideration and design of composite beams.

Unit – II
Composite floors: Structural elements - Profiled sheet decking - Bending resistance - Shear resistance - Serviceability criterion - Analysis for internal forces and moments - Design of composite floors.

Unit – III
Composite columns: Materials - Concrete filled circular tubular sections - Non-dimensional slenderness - Local buckling of steel sections - Effective elastic flexural stiffness - Resistance of members to axial compressions - Composite column design - Fire resistance.

Unit – IV
Composite trusses: Design of truss - Configuration - Truss members - Analysis and design of composite trusses and connection details.

Unit – V
Design of multi-storey composite buildings: Design basis - Load calculations - Design of composite slabs with profile decks - Composite beam design - Design for compression members - Vertical cross bracings - Design of foundation.

OE 943 ME	INDUSTRIAL SAFETY					
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Causes for industrial accidents and preventive steps to be taken.
2	Fundamental concepts of Maintenance Engineering.
3	About wear and corrosion along with preventive steps to be taken
4	The basic concepts and importance of fault tracing.
5	The steps involved in carrying out periodic and preventive maintenance of various equipments used in industry

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Identify the causes for industrial accidents and suggest preventive measures.
CO-2	Identify the basic tools and requirements of different maintenance procedures.
CO-3	Apply different techniques to reduce and prevent Wear and corrosion in Industry.
CO-4	Identify different types of faults present in various equipments like machine tools, IC Engines, boilers etc.
CO-5	Apply periodic and preventive maintenance techniques as required for industrial equipments like motors, pumps and air compressors and machine tools etc

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes, Fire prevention and firefighting, equipment and methods.

Unit – II

Fundamentals of Maintenance Engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit – III

Wear and Corrosion and their Prevention: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications of Screw down grease cup, Pressure grease gun, Splash lubrication, Gravity lubrication, Wick feed lubrication, Side feed lubrication, Ring lubrication, Definition of corrosion, principle and factors affecting the corrosion, Types of corrosion, corrosion prevention methods.

Unit – IV

Fault Tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, any one machine tool, Pump, Air compressor, Internal combustion engine, Boiler, Electrical motors, Types of faults in machine tools and their general causes.

Unit – V

Periodic and Preventive Maintenance: Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of Machine tools, Pumps, Air compressors, Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

Suggested Reading:

2	Audels, "Pump-hydraulic Compressors", Mcgraw Hill Publication
3	Higgins & Morrow, "Maintenance Engineering Handbook", Da Information Services.
4	1. Winterkorn, Hans, "Foundation Engineering Handbook", Chapman & Hall London

OE 941 LA		INTELLECTUAL PROPERTY RIGHTS				
(OPEN ELECTIVE)						
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Acquaint the students with basics of intellectual property rights with special reference to Indian Laws and its practices.
2	Compare and contrast the different forms of intellectual property protection in terms of their key differences and similarities.
3	Provide an overview of the statutory, procedural, and case law underlining these processes and their interplay with litigation.

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Understand the concept of intellectual property rights.
CO-2	Develop proficiency in trademarks and acquisition of trade mark rights.
CO-3	Understand the skill of acquiring the copy rights, ownership rights and transfer.
CO-4	Able to protect trade secrets, liability for misappropriations of trade secrets.
CO-5	Apply the patents and demonstration of case studies.

Course outcome	Program Outcome					
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6
CO-1	2	1	3	2	1	1
CO-2	3	2	1	1	2	-
CO-3	2	2	2	3	2	1
CO-4	1	3	1	2	1	1
CO-5	1	1	2	3	2	3

Unit – I
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

Unit – II
Trade Marks: Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting, and evaluating trade mark, trade mark registration processes.

Unit – III

Law of copy rights: Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law. Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer.

Unit – IV

Trade Secrets: Trade secrete law, determination of trade secrete status, liability for misappropriations of trade secrets, protection for submission, trade secrete litigation. Unfair competition: Misappropriation right of publicity, false advertising.

Unit – V

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Suggested Reading:

MC070	MINI PROJECT					
Pre-requisites	-		L	T	P	C
			-	-	4	2
Evaluation	SEE	-	CIE	50 Marks		

Course Objectives :

The course is taught with the objectives of enabling the student to:

- 1 Understand the purpose of doing mini project
- 2 Learn the resources available at the college and outside for pursuing project
- 3 Importance of literature review
- 4 Learn to select appropriate software and procedure
- 5 Learn to document results and arrive at required conclusions

Course Outcomes :

On completion of this course, the student will be able to do :

CO-1	<i>Identify engineering problems reviewing available literature</i>
CO-2	<i>Study different techniques used to analyze complex systems.</i>
CO-3	<i>Use related techniques and software's for solving the problem</i>
CO-4	<i>Interpret the results and arrive at the relevant conclusions.</i>
CO-5	<i>Document the findings as a technical report with proper references</i>

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1			3	2	1
CO2			3	3	1
CO3			3	3	1
CO4			3	3	1
CO 5			3	3	1

Guidelines

1. Guide allocation will be done at the beginning of the semester. Identification of mini project work will be done with Guides consultation
2. Mini project presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution.
3. Evaluation of Mini project will be done by the Departmental Committee. Half of the marks are awarded by the Guide and the remaining half of the marks will be awarded by Departmental Committee.

ME 452	COMPUTATIONAL LAB FOR TOOL DESIGN				
Pre-requisites	-		L	T	P
			-	-	2
Evaluation	SEE	-	CIE	50	

Course outcomes

1. Able to solve basic problems using Matlab
2. Able to install and solve basic engineering problems using python software
3. Able to implement matlab and python for real time projects
4. Use necessary tools to analyze practical systems for both static and dynamic conditions
5. Analyze, design, simulate, and experimentally validate systems while taking into account practical limitations of operations

MATLAB programs

1. Evaluate the mathematical expressions in Matlab
2. Write scripts to make the following single-index arrays
3. Basic syntax and command-line exercises, Basic array exercises, Relational and logical operations
4. Control of flow: if-blocks , Loop constructs: for and while
5. Problems on generating various kinds of 2D & 3D Plots
6. Solving ordinary differential equations
7. Solving non-linear algebraic equations
8. Applications of Curve fitting and interpolation
9. Usage of Data Analysis and statistics
10. Introduction to optimization methods like GA, Fuzzy, Neural & PSO
11. Introduction to SIMULINK
12. Matlab& Simulink applied to manufacturing processes

Python Programming

1. Running Python scripts
2. Using Python as a calculator
3. Compute the value of PI
4. Computing trigonometric functions, arrays, strings, functions, methods, conditional expressions, loops, lists, modules,
5. Working with data: lists, sorting, tuples, sets, files, comprehensions, dictionaries
6. Working with modules, object oriented programming (state, classes, objects, inheritance, errors, exceptions, iterators, generators)
7. Working with functional programming: recursion, higher order functions, decorators, exec, eval
8. Writing code for simple manufacturing processes
9. Solving optimization methods like Genetic algorithms
10. Solving problems on statistics

ME453	DESIGN SIMULATION LAB					
Pre-requisites	-		L	T	P	C
			-	-	2	1
Evaluation	SEE	-	CIE	50		

Course outcomes: on Completion the student should be able to

1. Understand the significance of stress analysis for various load conditions in tool design.
2. Understand the thermal behavior and application of heat transfer in moulds and die casting dies.
3. Understand the importance of parametric design approach.
4. Understand the significance of feature base modelling and its application.
5. Communicate between design and manufacturing using 2D.

List of Exercises:

1. Design and modelling of (2D and 3D) for a simple press tool with best stock utilization.
2. Design and modelling (2D and 3D) for progressive die with best stock utilization.
3. Design and modelling (2D and 3D) for a bending tool.
4. 3D modelling of a plastic component with core and cavity extraction for a 2-plate mould.
5. Design and modelling of 2-plate mould for plastic part using standard-mould base.
6. 3D modelling of a plastic component with shrinkage, cavity and core extraction for 2-plate multi impression mould.
7. Design and modelling of a die casting die for cold chamber machine.
8. Modelling of part by 3-2-1/4-2-1 principle.
9. Design and modelling of a Drill-jig.
10. Design and modelling of milling fixture.
11. Load and deflection analysis of core back plate of a mould.
12. Deflection analysis of punches.
13. Stress analysis of a bending tools.
14. Stress analysis of simply supported beam.
15. Thermal analysis of heat transfer in mould plate.

Note: To create the above exercises and appropriate design software like viz., Creo-parametric (or Unigraphics) and Ansys are consider as basic curriculum .

SEMESTER-III

AC030 ME	RESEARCH METHODOLOGY IN MECHANICAL ENGINEERING					
AUDIT - I						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

1	Learn to focus on research related activities.
2	Learn methods to devise and develop the various research designs
3	Learn basic principles of data collection and analysis techniques
4	Learn the style and format of writing a report for technical papers

Course Outcomes : After completion of the course student will be able to

CO-1	Motivate the orientation towards research related activities
CO-2	Formulate the research problem, analyze research related information
CO-3	Identify various sources for literature review and design an experimentation set-up
CO-4	Apply the basic principles of data collection and analysis techniques
CO-5	Improve the style and format of writing a report for technical / Journal articles

UNIT – I

Research Methodology: Objectives and Motivation of Research, Types of Research, Research Approaches, Significance of Research, Research Methods verses Methodology, Research and Scientific Method, Important of Research Methodology, Research Process, Criteria of Good Research, Problems Encountered by Researchers in India, Benefits to the society in general.

Defining the Research Problem: Definition of Research Problem, Problem Formulation, Necessity of Defining the Problem, Technique involved in Defining a Problem

UNIT – II

Literature Survey: Importance of Literature Survey, Sources of Information, Assessment of Quality of Journals and Articles, Information through Internet. **Literature Review:** Need of Review, Guidelines for Review, Record of Research Review.

UNIT – III

Research Design: Meaning of Research Design, Need of Research Design, Feature of a Good Design Important Concepts Related to Research Design, Different Research Designs, Basic Principles of Experimental Design, Developing a Research Plan, Design of Experimental Set-up, Use of Standards and Codes.

UNIT – IV

Data Collection: Collection of primary data, Secondary data, Data organization, Methods of data grouping, Diagrammatic representation of data, Graphic representation of data. Sample Design, Need for sampling, some important sampling definitions, Estimation of population, Role of Statistics for Data Analysis, Parametric V/s Non Parametric methods, Descriptive Statistics, Measures of central tendency and Dispersion, Hypothesis testing, Use of Statistical software.

Data Analysis: Deterministic and random data, Uncertainty analysis, Tests for significance: Chi-square, student's t-test, Regression modeling, Direct and Interaction effects, ANOVA, F-test, Time Series analysis, Autocorrelation and Autoregressive modeling

UNIT –V

Research Report Writing: Format of the Research report, Synopsis, Dissertation, Thesis its Differentiation, References/Bibliography/Webliography, Technical paper writing/Journal report writing, making presentation, Use of visual aids. **Research Proposal Preparation:** Writing a Research Proposal and Research Report, Writing Research Grant Proposal.

Suggested Reading:

1	C.R Kothari, Research Methodology, Methods & Technique; Revised Edition, New Age International Publishers, 2004
2	R. Ganesan, Research Methodology for Engineers, 1 st Edition, MJP Publishers, 2011.
3	Ratan Khananabis and Suvasis Saha, Research Methodology, 1 st Edition, Universities Press, Hyderabad, 2015
4	Y.P. Agarwal, Statistical Methods: Concepts, Application and Computation, 1 st Edition, Sterling Pubs., Pvt., Ltd., New Delhi, 2004
5	Vijay Upagade and Aravind Shende, Research Methodology, 1 st Edition, S. Chand & Company Ltd., New Delhi, 2009
6	G. Nageswara Rao, Research Methodology and Quantitative methods, 2 nd Edition, BS Publications, Hyderabad, 2012.

AC 031	ENGLISH FOR RESEARCH PAPER WRITING					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

The course is taught with the objectives of enabling the student to:

1	<i>Understand that how to improve your writing skills and level of readability</i>
2	<i>Understand the nuances of language and vocabulary in writing a Research Paper.</i>
3	<i>Develop the content, structure, format of writing a research paper and produce original research papers without plagiarism</i>

Course Outcomes :

On completion of this course, the student will be able to :

CO-1	<i>Interpret the nuances of research paper writing.</i>
CO-2	<i>Differentiate the research paper format and citation of sources.</i>
CO-3	<i>To review the research papers and articles in a scientific manner.</i>
CO-4	<i>Avoid plagiarism and be able to develop their writing skills in presenting the research work.</i>
CO-5	<i>Create a research paper and acquire the knowledge of how and where to publish their original research papers</i>

Unit – I

Academic Writing: Meaning & Definition of a research paper– Purpose of a research paper – Scope – Benefits, Limitations – outcomes.

Unit – II

Research Paper Format: Title – Abstract – Introduction – Discussion – Findings, Conclusion – Style of Indentation – Font size/Font types – Indexing – Citation of sources.

Unit – III

Research Methodology: Methods (Qualitative – Quantitative) Review of Literature. Criticizing, Paraphrasing & Plagiarism.

Unit – IV

Process of Writing a research paper: Choosing a topic - Thesis Statement – Outline – Organizing notes - Language of Research – Word order, Paragraphs – Writing first draft – Revising/Editing - The final draft and proof reading.

Unit – V

Research Paper Publication: Reputed Journals – National/International – ISSN No, No. of volumes, Scopus Index/UGC Journals – Free publications - Paid Journal publications – Advantages/Benefits

Presentation Skills: Developing Persuasive Presentations, Structure of Presentation,

Presentation Slides, Presentation Delivery, role of the audience, what to search and cite, how to establish credibility.

Suggested Reading:

1	C. R Kothari, Gaurav, Garg, “ <i>Research Methodology Methods and Techniques</i> ”, 4/e, New Age International Publishers.
2	Day R, “ <i>How to Write and Publish a Scientific Paper</i> ”, Cambridge University Press, 2006
3	“ <i>MLA Hand book for writers of Research Papers</i> ”, 7/e, East West Press Pvt. Ltd, New Delhi
4	Lauri Rozakis, Schaum’s, “ <i>Quick Guide to Writing Great Research Papers</i> ”, Tata McGraw Hills Pvt. Ltd, New Delhi.

AC 032	DISASTER MITIGATION AND MANAGEMENT					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	<i>Introduction of various types of disasters and its effect on structures.</i>
2	<i>Learning of quality assurance and damage assessment of structures</i>
3	<i>Educate different types of repair, strengthening, rehabilitation and retrofitting techniques.</i>
4	<i>Awareness about flood characteristics and flood forecasting systems</i>
5	<i>Description of Flood mitigation, adjustment, and regulation</i>

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	<i>Understand the fundamentals of disaster and seismic performance of buildings</i>
CO-2	<i>Able to assess various damages in structures and give assurance of quality of concrete</i>
CO-3	<i>Decide the appropriate repair, strengthening, rehabilitation and technique required for a case study of building.</i>
CO-4	<i>Applications of flood routing, flood forecasting and space time characteristics of rainfall.</i>
CO-5	<i>Advanced understanding of flood plain adjustments and employment of appropriate technologies for flood mitigation.</i>

Unit – I
Disaster: Classifications - Causes - Impacts including social, economical, political, environmental, health, psychosocial, etc.
Seismic performance of buildings: case studies of major earthquakes in the country, damage to buildings, damage patterns, performance of non-engineered buildings- Introduction to repair and rehabilitation of structures.

Unit – II
Quality assurance for concrete – Strength, Durability and Thermal properties of concrete. Damage Assessment: - Condition assessment and distress, Purpose of assessment, Rapid assessment - diagnostic techniques, Investigation of damage, , Evaluation of surface and structural cracks, Damage assessment procedure, destructive, non-destructive and semi destructive testing systems, Procedure for evaluating damaged of structure.

Unit – III
Repair, Rehabilitation And Retrofitting Techniques : Repair materials, Common types of repairs – Repair in concrete structures – Repairs in under water structures – Guniting – Shot create –Underpinning, Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, Leakage, earthquake, Retrofitting techniques

Unit – IV

Introduction to Disasters: Hazard, Vulnerability, Resilience, Risks.-Disaster- Different types of cold wave-heat wave- droughts- floods-Effect of climate change on Processes.

Flood characteristics and forecasting: Measureable features of a flood (Elevation, discharge, volume, and duration), flood forecasting (unit hydrograph method, meteorological and snow data, and snow field air temperatures), operation of flood forecasting systems.

Space-time characteristics of rainfall: Policy criteria for design flood of a major and minor reservoir, spillways, diversion dams and barrages, design flood criteria for dams and other hydraulic structures (CWC recommendations).

Unit – V

Flood Routing: Mathematics of flood routing, various methods of flood routing, Hydrologic and Hydraulic routing.

Flood mitigation: flood ways, channel improvement, evacuation and flood proofing, land management, flood plain management, estimating benefits of flood mitigation.

Flood plain adjustments and regulations: Results of controlling floods, alternatives to controlling floods, range of possible adjustments, practical range of choice, critical characteristics of flood hazards.

Suggested Reading:

1	Barry A. Richardson, “Defects and Deterioration in Buildings”, E &FN Spon Press, London, 1991.
2	J. H. Bungey, “Testing of Concrete in Structures”, Chapman and Hall, New York, 1989.
3	“A.R. Santakumar, “Concrete Technology”, Oxford University Press, New Delhi, 2006.
4	“Pankaj Agarwal and Manish Shrihkande (2006). “Earthquake Resistance Design of Structures.” Prentice Hall of India.
5	“Ravishankar.K., Krishnamoorthy.T.S, "Structural Health Monitoring, Repair and Rehabilitation of Concrete Structures", Allied Publishers, 2004. New Technological Age”, 2016.
6	CPWD and Indian Buildings Congress, Hand book on Seismic Retrofit of Buildings, Narosa Publishers, 2008.

AC 033	SANSKRIT FOR TECHNICAL KNOWLEDGE					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

The course is taught with the objectives of enabling the student to:

1	<i>To get a working knowledge in illustrious Sanskrit, the scientific language in the world</i>
2	<i>To make the novice Learn the Sanskrit to develop the logic in mathematics, science & other subjects</i>
3	<i>To explore the huge knowledge from ancient Indian literature</i>

Course Outcomes :

On completion of this course, the student will be able to :

CO-1	<i>Develop passion towards Sanskrit language</i>
CO-2	<i>Decipher the latent engineering principles from Sanskrit literature</i>
CO-3	<i>Correlates the technological concepts with the ancient Sanskrit history.</i>
CO-4	<i>Develop knowledge for the technological progress</i>
CO-5	<i>Explore the avenue for research in engineering with aid of Sanskrit</i>

Unit – I

Introduction to Sanskrit Language: Sanskrit Alphabets-vowels-consonants- significance of Amarakosa-parts of Speech-Morphology-creation of new words-significance of synonyms-sandhi-samasa-sutras-active and passive Voice-Past/Present/Future Tense-Syntax-Simple Sentences (elementary treatment only)

Unit – II

Role of Sanskrit in Basic Sciences: Brahmagupthas lemmas (second degree indeterminate equations), sum of squares of n-terms of AP- sulba, sutram or baudhayana theorem (origination of Pythagoras theorem)-value of pie-Madhava's sine and cosine theory (origination of Taylor's series). The measurement system-time- mass- length-temp, Matter elasticity-optics-speed of light (origination of Michaelson and Morley theory).

Unit – III

Role of Sanskrit in Engineering-I (Civil, Mechanical, Electrical and Electronics Engineering):

Building construction-soil testing-mortar-town planning-Machine definition-crucible-furnace-air blower- Generation of electricity in a cell-magnetism-Solar system-Sun: The source of energy, the earth-Pingala chandasutram (origination of digital logic system)

Unit – IV

Role of Sanskrit in Engineering-II (Computer Science Engineering & Information Technology): Computer languages and the Sanskrit languages-computer command words and the vediccommand words-analogy of pramana in memamsa with operators in computer language-sanskrit analogy of physical sequence and logical sequence, programming.

Unit – V

*Role of Sanskrit in Engineering-III (Bio-technology and Chemical Engineering):*Classification of plants- plants, the living-plants have senses-classification of living creatures, Chemical laboratory location and layout- equipment-distillation vessel-kosthiyanthram

Suggested Reading:

1	M Krishnamachariar, “ <i>History of Classical Sanskrit Literature</i> ”, TTD Press, 1937.
2	M.R. Kale, “ <i>A Higher Sanskrit Grammar: For the Use of School and College Students</i> ”, Motilal Banarsidass Publishers, 2015.
3	Kapail Kapoor, “ <i>Language, Linguistics and Literature: The Indian Perspective</i> ”, ISBN- 10: 8171880649, 1994.
4	“ <i>Pride of India</i> ”, Samskrita Bharati Publisher, ISBN: 81-87276 27-4, 2007.
5	Shri Rama Verma, “ <i>Vedas the source of ultimate science</i> ”, Nag publishers, 2005.

AC 034	VALUE EDUCATION					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

The course is taught with the objectives of enabling the student to:

1	<i>Understand the need and importance of Values for self-development and for National development.</i>
2	<i>Imbibe good human values and Morals</i>
3	<i>Cultivate individual and National character.</i>

Course Outcomes :

On completion of this course, the student will be able to :

CO-1	<i>Gain necessary Knowledge for self-development</i>
CO-2	<i>Learn the importance of Human values and their application in day to day professional life.</i>
CO-3	<i>Appreciate the need and importance of interpersonal skills for successful career and social life</i>
CO-4	<i>Emphasize the role of personal and social responsibility of an individual for all-round growth.</i>
CO-5	<i>Develop a perspective based on spiritual outlook and respect women, other religious practices, equality, non-violence and universal brotherhood.</i>

Unit – I

Human Values, Ethics and Morals: Concept of Values, Indian concept of humanism, human values; Values for self-development, Social values, individual attitudes; Work ethics, moral and non- moral behaviour, standards and principles based on religion, culture and tradition.

Unit – II

Value Cultivation, and Self-management: Need and Importance of cultivation of values such as Sense-of Duty, Devotion to work, Self-reliance, Confidence, Concentration, Integrity & discipline, and Truthfulness.

Unit – III

Spiritual outlook and social values: Personality and Behavior, Scientific attitude and Spiritual (soul) outlook; Cultivation of Social Values Such as Positive Thinking, Punctuality, Love & Kindness, avoiding fault finding in others, Reduction of anger, forgiveness, Dignity of labour, True friendship, Universal brotherhood and religious tolerance.

Unit – IV

Values in Holy Books: Self-management and Good health; internal & external cleanliness, Holy books versus Blind faith, Character and Competence, Equality, Nonviolence, Humility, Role of Women.

Unit – V

Dharma, Karma and Guna: Concept of soul; Science of Reincarnation, Character and Conduct, Concept of Dharma; Cause and Effect based Karma Theory; The qualities of Devine and Devilish; Satwic, Rajasic and Tamasic gunas.

Suggested Reading:

1	Chakroborty, S.K., “ <i>Values & Ethics for organizations Theory and practice</i> ”, Oxford University Press, New Delhi, 1998.
2	Jaya DayalGoyandaka, “ <i>Srimad Bhagavad Gita with Sanskrit Text</i> ”, Word Meaning and Prose Meaningl, Gita Press, Gorakhpur, 2017.

AC 035	STRESS MANAGEMENT BY YOGA					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

The course is taught with the objectives of enabling the student to:

1	<i>Creating awareness about different types of stress and the role of yoga in the management of stress.</i>
2	<i>Promotion of positive health and overall wellbeing (Physical, mental, emotional, social and spiritual).</i>
3	<i>Prevention of stress related health problems by yoga practice.</i>

Course Outcomes :

On completion of this course, the student will be able to :

CO-1	<i>To understand yoga and its benefits.</i>
CO-2	<i>Enhance Physical strength and flexibility.</i>
CO-3	<i>Learn to relax and focus.</i>
CO-4	<i>Relieve physical and mental tension through Asanas</i>
CO-5	<i>Improve work performance and efficiency.</i>

Unit – I

Meaning and definition of Yoga - Historical perspective of Yoga - Principles of Astanga Yoga by Patanjali.

Unit – II

Meaning and definition of Stress - Types of stress - Eustress and Distress. Anticipatory Anxiety and Intense Anxiety and depression. Meaning of Management- Stress Management.

Unit – III

Concept of Stress according to Yoga - Stress assessment methods - Role of Asana, Pranayama and Meditation in the management of stress.

Unit – IV

Asanas- (5 Asanas in each posture) - Warm up - Standing Asanas - Sitting Asanas - Prone Asanas - Supine asanas - Surya Namaskar.

Unit – V

Pranayama- Anulom and Vilom Pranayama - Nadishudhi Pranayama – Kapalabhati- Pranayama - Bhramari Pranayama - Nadanusandhana Pranayama.

Meditation techniques: Om Meditation - Cyclic meditation : Instant Relaxation technique (QRT), Quick Relaxation Technique (QRT), Deep Relaxation Technique (DRT).

Suggested Reading:

1	“Yogic Asanas for Group Training - Part-I”: Janardhan Swami Yogabhyasi Mandal, Nagpur
2	“Rajayoga or Conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata
3	Nagendra H.R nad Nagaratna R, “Yoga Perspective in Stress Management”, Bangalore, Swami Vivekananda Yoga Prakashan

Web resource:

2	https://freevideolectures.com/course/3539/indian-philosophy/11

AC 036	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :

The course is taught with the objectives of enabling the student to:

1	<i>To learn to achieve the highest goal happily</i>
2	<i>To become a person with stable mind, pleasing personality and determination</i>
3	<i>To awaken wisdom in students</i>

Course Outcomes :

On completion of this course, the student will be able to :

CO-1	<i>Develop their personality and achieve their highest goal of life.</i>
CO-2	<i>Lead the nation and mankind to peace and prosperity.</i>
CO-3	<i>To practice emotional self regulation.</i>
CO-4	<i>Develop a positive approach to work and duties.</i>
CO-5	<i>Develop a versatile personality.</i>

Unit – I

Neetisatakam – Holistic development of personality - Verses 19, 20, 21, 22 (Wisdom) - Verses 29, 31, 32 (Pride and Heroism) - Verses 26,28,63,65 (Virtue)

Unit – II

Neetisatakam – Holistic development of personality (cont'd) - Verses 52, 53, 59 (don't's) - Verses 71,73,75 & 78 (do's) - Approach to day to day works and duties.

Unit – III

Introduction to Bhagavad Geetha for Personality Development - Shrimad Bhagawad Geeta: Unit 2 – Verses 41, 47, 48 - Unit 3 – Verses 13,21,27,35 - Unit 6 – Verses 5,13,17,23,35 - Unit 18 – Verses 45, 46, 48 Unit – 6: Verses 5, 13, 17, 23, 35; Unit – 18: Verses 45, 46, 48.

Unit – IV

Statements of basic knowledge - Shrimad Bhagawad Geeta: Unit 2- Verses 56, 62,68 - Unit 12 – Verses 13, 14, 15, 16, 17, 18 - Personality of Role model from Shrimad Bhagawad Geeta.

Unit – V

Role of Bahgavadgeeta in the present scenario - Unit 2 – Verses 17 – Unit 3 – Verses 36, 37, 42 - Unit 4 – Verses 18, 38, 39 - Unit 18 – Verses 37, 38, 63.

Suggested Reading:

1	“Srimad Bhagavad Gita” by Swami SwarupanandaAdvaita Ashram (Publication Department), Kolkata.
2	Bhartrihari’s Three Satakam (Niti-sringar-vairagya) by P.Gopinath, Rashtriya Sanskrit, Sansthanam, New Delhi.

Web resource:

AC 037	CONSTITUTION OF INDIA					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	<i>The history of Indian Constitution and its role in the Indian democracy.</i>
2	<i>Address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.</i>
3	<i>Have knowledge of the various Organs of Governance and Local Administration.</i>

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	<i>Understand the making of the Indian Constitution and its features.</i>
CO-2	<i>Understand the Rights of equality, the Right of freedom and the Right to constitutional remedies.</i>
CO-3	<i>Have an insight into various Organs of Governance - composition and functions</i>
CO-4	<i>Understand powers and functions of Municipalities, Panchayats and Co-operative Societies.</i>
CO-5	<i>Understand Electoral Process, special provisions.</i>

Unit – I
History of making of the Indian constitutions: History, Drafting Committee (Composition & Working). Philosophy of the Indian Constitution: Preamble, Salient Features.

Unit – II
Contours of Constitutional Rights and Duties Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties

Unit – III
Organs of Governance”: Parliament: Composition, Qualifications, Powers and Functions, Union executives : President, Governor, Council of Ministers, Judiciary, appointment and transfer of judges, qualifications, powers and functions.

Unit – IV
Local Administration - District's Administration head: Role and importance. Municipalities: Introduction, ayor and role of Elected Representative, CEO of Municipal Corporation. Panchayati Raj: Introduction, PRI: Zilla Panchayat, Elected Officials and their roles, CEO Zilla Panchayat: positions and role. Block level: Organizational Hierarchy (Different departments) Village level: role of elected and appointed officials. Importance of

grass root democracy.

Unit – V

Election commission: Election Commission: Role and functioning, Chief Election Commissioner and Election Commissioners, State Election Commission :Role and functioning. Institute and Bodies for the welfare of SC/ST/OBC and women.
--

Suggested Reading:

1	The Constitution of India”, 1950 (Bare Act), Government Publication
2	Dr. S. N. Busi, Dr. B. R. Ambedkar, “Framing of Indian Constitution”, 1st Edition, 2015.
3	M. P. Jain, “Indian Constitution Law”, 7th Edn., Lexis Nexis, 2014
4	D.D. Basu, “Introduction to the Constitution of India”, Lexis Nexis, 2015.

AC 038	PEDAGOGY STUDIES					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	<i>To present the basic concepts of design and policies of pedagogy studies.</i>
2	<i>To provide understanding of the abilities and dispositions with regard to teaching techniques, curriculum design and assessment practices and familiarize various theories of learning and their connection to teaching practice.</i>
3	<i>To create awareness about the practices followed by DFID, other agencies and other researchers and provide understanding of critical evidence gaps that guides the professional development</i>

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	<i>Illustrate the pedagogical practices followed by teachers in developing countries both in formal and informal classrooms.</i>
CO-2	<i>Examine the effectiveness of pedagogical practices.</i>
CO-3	<i>Understand the concept, characteristics and types of educational research and perspectives of research.</i>
CO-4	<i>Describe the role of classroom practices, curriculum and barriers to learning.</i>
CO-5	<i>Understand Research gaps and learn the future directions.</i>

Unit – I
<i>Introduction and Methodology: Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions, Overview of methodology and Searching.</i>

Unit – II
<i>Thematic Overview: Pedagogical practices followed by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.</i>

Unit – III
<i>Evidence on the Effectiveness of Pedagogical Practices: Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and Practicum) and the school curriculum and guidance material best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches – Teachers attitudes and beliefs and pedagogic strategies.</i>

Unit – IV

Professional Development: alignment with classroom practices and follow up support - Support from the head teacher and the community – Curriculum and assessment - Barriers to learning: Limited resources and large class sizes.

Unit – V

Research Gaps and Future Directions: Research design – Contexts – Pedagogy - Teacher education - Curriculum and assessment – Dissemination and research impact.

Suggested Reading:

AC 039	E-WASTE MANAGEMENT					
(AUDIT COURSE - II)						
Pre-requisites			L	T	P	C
			2	-		0
Evaluation	SEE	60 Marks	CIE		40 Marks	

Course Objectives :	
The course is taught with the objectives of enabling the student to:	
1	Introduction to E-Waste management
2	Understanding on resource efficiency and circular economy
3	E-waste Management rules 2016
4	RoHS compliances/directives to EEE

Course Outcomes :	
On completion of this course, the student will be able to :	
CO-1	Complete understanding on E-Waste management
CO-2	Understanding on effective recycling methodologies for e-waste management
CO-3	Overall understanding about E-waste Management rules 2016 and strategies for e-waste management
CO-4	Understanding on RoHS compliances for EEE products

Unit – I
Waste Electrical and Electronic Equipment (WEEE): Flows, Quantities and Management, a Global Scenario; The Importance of Waste Management; Types of Waste- Solid and Liquid; Criteria for EEE/E-Waste Classification; Multivariate Model for E-Waste Estimation; Environmental and Health Effects of Waste Management, Inventorisation of E-Waste and Emerging trends in E-waste disposal with bench marks for depollution - global scenario; Dumping, Burning and Landfill: Impact on the Environment

Unit – II
Effective Waste Management and Disposal Strategies; Legislative Influence on Electronics Recycling; Waste Management Rules and Their Amendments; Extended Producer Responsibility (EPR) in E-Waste Management; The Role of Collective versus Individual Producer Responsibility in E-Waste Management

Unit – III
Electronic Waste: Public Health Implications; Restriction of Hazardous Substances (RoHS) Directives in Electrical and Electronic Equipment; Materials Used in Manufacturing Electrical and Electronic Products

Unit – IV
Recycling and Resource Management: Ecological and Economical Valuation; Life Cycle Assessment (LCA) Approach to Waste Management System; Environmental Incentives for Recycling and Life Cycle Analysis of Materials Recycling Electronic Waste: Challenges and

Opportunities for Sustainable Management; Resource Recovery from E-waste: Efficiency and Circular Economy; Integrated Approach to E-Waste Recycling: Recycling and Recovery Technologies, Recycling and Recovery Technologies.

Unit – V

Cases studies: E-waste Generation, collection and recycling

Suggested Reading:

1	Electronic Waste Management and Treatment Technology, Editors: Majeti Narasimha Vara Prasad MeththikaVithanage
2	Electronic Waste Management, Edited by R. E. Hester, R. M. Harrison, RSC Publishing 2009

6	E-waste: Implications, regulations, and management in India and current global best practices. Author(s): Rakesh Johri, TERI Press

ME 481	DISSERTATION PHASE-I					
Pre-requisites	-		L	T	P	C
			-	-	20	10
Evaluation	SEE	-	CIE	100 Marks		

Course Objectives :

The course is taught with the objectives of enabling the student to:

- 1 *Understand the purpose of Project work*
- 2 *Learn the resources available at the college and outside for pursuing the project*
- 3 *Importance of literature review*
- 4 *Learn to select appropriate software and procedure*
- 5 *Learn to document results and arrive at required conclusions*

Course Outcomes :

On completion of this course, the student will be able to do :

CO-1	<i>Identify suitable engineering problems reviewing available literature.</i>
CO-2	<i>Study different techniques used to analyze complex systems.</i>
CO-3	<i>Use related techniques and software's for solving the problem</i>
CO-4	<i>Interpret the results (if available) and defend work in front of technically qualified audience</i>
CO-5	<i>Document the findings as a technical report with proper references</i>

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1			2	3	1
CO2			2	3	1
CO3			2	3	1
CO4			2	3	1
CO 5			2	3	1

Guidelines

1. The Major Project Phase-I Work should preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution.
2. Seminar should be based on the area in which the candidate has undertaken the dissertation work as per the common instructions for all branches of M.E.
3. The examination shall consist of the preparation of report consisting of a detailed

problem statement and a literature review.

4. The preliminary results (if available) of the problem may also be discussed in the report.
5. The work has to be presented in front of the examiners panel set by Head and Faculty Advisor
6. The candidate has to be in regular contact with his guide and the topic of dissertation must be mutually decided by the guide and student.

SEMISTER – IV

ME 481	DISSERTATION PHASE-II					
Pre-requisites	-		L	T	P	C
			-	-	20	10
Evaluation	SEE	100 Marks	CIE	100 Marks		

Course Objectives :

The course is taught with the objectives of enabling the student to:

- 1 Understand the purpose of doing project work
- 2 Learn the resources available at the college and outside for pursuing project
- 3 Importance of literature review
- 4 Learn to select appropriate software and procedure
- 5 Learn to document results and arrive at required conclusions

Course Outcomes :

On completion of this course, the student will be able to do :

CO-1	<i>Use different Simulation models /experimental techniques/ software/ computational /analytical tools.</i>
CO-2	<i>Design and develop Simulation model/Mathematical model/ experimental set up/ equipment/ testrig.</i>
CO-3	<i>Conduct tests and draw logical conclusions from the results after analyzing them.</i>
CO-4	<i>Work in either in research environment or in an industrial environment and Conversant with technical report writing.</i>
CO-5	<i>Present and defend their work to the evaluation committee</i>

Course outcome	Program outcome				
	PO1	PO2	PO3	PO4	PO5
CO1			2	3	1
CO2			2	3	1
CO3			2	3	1
CO4			2	3	1
CO 5			2	3	1

Guidelines

1. It is a continuation of Major Project Phase I work started in semester III.
2. The project work should be presented in standard format as provided by the department.
3. The candidate has to prepare a detailed project report consisting of introduction of the problem, problem statement, literature review, objectives of the work, methodology (experimental set up or numerical details as the case may be) adopted & Result analysis.
4. The report must bring out the conclusions of the work and future scope for the study and also should be properly referenced.
5. Student has to submit the report in prescribed format and also present a seminar.
6. Student should present a Seminar in front of Internal committee consisting of Head, CBoS, Guide, Subject expert, Faculty Advisor. Further the suggestions of the committee have to be incorporated in the final Report.
7. The final work has to be presented in front of the examiners panel consisting of an approved external examiner and a guide, co-guide etc. as decided by the Head and Faculty advisor.
8. The candidate has to be in regular contact with his guide.

CAD/CAM FOR TOOLING DESIGN

Course Objectives

The course is taught with the objectives of enabling the student to:

1. Understand the application of CAD/CAM systems in the design and manufacture of tooling components.
 2. Study geometric modelling, assembly modelling and drafting techniques for press tools, moulds, dies, jigs and fixtures.
 3. Learn the use of CAM for tool path generation, NC programming and manufacturing of tooling components.
 4. Analyze the integration of CAD and CAM in tool design, process planning and tooling manufacture.
 5. Develop the ability to use CAD/CAM systems for efficient design, analysis and production of tooling systems.
-

Course Outcomes

On completion of this course, the student will be able to:

CO1: Explain the role of CAD/CAM in the design and manufacture of tooling systems.

CO2: Develop geometric models and assembly models of tooling components using CAD principles.

CO3: Apply CAD techniques for design and detailing of dies, moulds, jigs, fixtures and cutting tools.

CO4: Use CAM concepts for tool path generation, NC programming and manufacturing of tooling components.

CO5: Integrate CAD/CAM methods for improved productivity, accuracy and flexibility in tool design and manufacture.

UNIT – I

Introduction to CAD/CAM in Tooling

Role of CAD/CAM in tool design and manufacturing. Need for computer aided design in press tools, moulds, dies, jigs, fixtures and cutting tools. Product cycle in tooling industry. CAD/CAM hardware and software components. Graphics devices, input/output devices, storage devices and CAD/CAM workstations. Database concepts in CAD/CAM. Benefits and limitations of CAD/CAM in tooling applications.

UNIT – II

Geometric Modelling and Tooling Component Modelling

Principles of geometric modelling – wireframe, surface and solid modelling. Parametric and feature-based modelling. Geometric transformations and editing operations. Modelling of tooling elements such as punches, dies, die blocks, cavities, cores, mould inserts, fixture bodies and cutting tool profiles. Assembly modelling of tool components. Generation of engineering drawings, sectional views, exploded views and bill of materials for tooling assemblies.

UNIT – III

CAD Applications in Press Tools, Moulds and Fixtures

Computer aided design of blanking, piercing, bending and drawing dies. CAD applications in plastic mould design – cavity and core modelling, runner and gate layout, mould base assembly and cooling channel modelling. CAD applications in design of jigs and fixtures – location, clamping and support arrangements. Interference checking, tolerance considerations and design validation in tooling assemblies.

UNIT – IV

CAM for Tooling Manufacture

Introduction to CAM and CNC systems. NC part programming fundamentals – manual and computer assisted programming. Tool path generation for machining of tool room components such as die cavities, mould inserts, punches, electrodes and fixture elements. Contouring, pocketing, drilling and surface machining operations. Post processing, simulation and verification of machining operations. CNC machining of complex tooling surfaces.

UNIT – V

Integrated CAD/CAM for Tool Design and Manufacturing

Integration of CAD and CAM in tool rooms and manufacturing systems. Process planning for tooling manufacture. Computer aided process planning for dies, moulds and fixtures. Reverse engineering and digitization for tooling applications. Role of CAD/CAM in rapid tooling and concurrent engineering. Data exchange standards, product data management and industrial applications of CAD/CAM in tool engineering.

Suggested Readings

1. **CAD/CAM: Computer Aided Design and Manufacturing** – M. Groover and E. Zimmers, Prentice Hall.
2. **Computer Aided Design and Manufacturing** – P.N. Rao, Tata McGraw-Hill.
3. **CAD/CAM Theory and Practice** – Ibrahim Zeid, Tata McGraw-Hill.
4. **Fundamentals of Tool Design** – Society of Manufacturing Engineers (SME).
5. **Computer Numerical Control** – Groover, Pearson / relevant editions.
6. **Manufacturing Engineering and Technology** – Serope Kalpakjian and Steven Schmid, Pearson
